Abstract

The abstract provides the simplest explanation for “what does the system do?” and will be published online to accompany the PIA link.

CyberREN is a renal patient care information management system, with features that address the broad range of functionality required by clinics and hospitals engaged in the treatment of all phases of kidney disease. CyberREN is used by health care professionals in all disciplines providing care to chronic kidney disease, renal replacement therapy, and kidney transplantation patients. CyberREN uses a Microsoft Structured Query Language (SQL) Server database to store data. This technology uses Thin Client, tablet, or browser-based systems to graphically present information at the point of care (POC).

CyberREN communicates with Veterans Health Information Systems and Technology Architecture (VistA) using a Health Level 7 (HL7) feed through Integration Framework (DSIHW). Information is entered into CyberREN by the dialysis user, then that information is sent back to VistA/Computerized Patient Record System (CPRS) to create notes, lab orders, lab results, pharmacy orders, progress notes. Dialysis users are able to see patient information in CyberREN due to HL7 messages communicating the patient’s demographics, labs, meds, problem list, diagnoses, etc. from VistA/CPRS.

Patient information is also stored in the CyberREN database, which is always in the VA network, to be used for reporting, etc. Any access to the database containing the medical record is protected at the database authorization security level.

Overview

The overview is the most important section of the PIA. A thorough and clear overview gives the reader the appropriate context to understand the responses in the PIA. The overview should contain the following elements:

- The IT system name and the name of the program office that owns the IT system.
- The business purpose of the program, IT system, or technology and how it relates to the program office and agency mission.
- Indicate the ownership or control of the IT system or project.
- The expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual.
- A general description of the information in the IT system and the purpose for collecting this information.
- Any information sharing conducted by the IT system. A general description of the modules and subsystems, where relevant, and their functions.
• Whether the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites.
• A citation of the legal authority to operate the IT system.
• Whether the completion of this PIA will result in circumstances that require changes to business processes
• Whether the completion of this PIA could potentially result in technology changes
• If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval? If the system is using cloud technology, does the SORN for the system cover cloud usage or storage?

VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, and Wilmington)
CyberREN System is a comprehensive Electronic Medical Record (EMR) and clinical data analysis and reporting system for Nephrology. This mature dialysis EMR has been installed in the commercial market since 1996 and is currently being deployed within the Veterans Healthcare Administration (VHA). VISN 4 is the first to deploy the CyberREN system to VA Cloud.

The CyberREN system will be integrated with Veteran’s Health Information Systems and Technology Architecture (VistA) using the Decision Support System (DSS) integration toolkit and overall Integration Framework. With two major modules for Hemodialysis and Chronic Kidney Disease, and other modules available - the solution will enable providers to deliver the best possible renal care for Veterans.

The VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, and Wilmington) serves over 539,00 veterans, dependents, and other members of the public (such as hospital volunteers). As an Electronic Health Record (EHR) system, the VistA system collects, maintains, and disseminates a wide variety of information, including contact information of veterans and their families, financial and insurance data used to process medical payments, medical history and the results of medical exams and tests, and more.

Veteran’s Health Information Systems and Technology Architecture (VistA) is a highly integrated system which runs administrative and clinical applications (designated as “VHA Sensitive Software” by VA Directive 6402 ‘Modifications to Standardized National Software’). These applications can only be modified by staff with approved Elevated Privileges.

The following VA System of Record Notices (SORNs) apply to the VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) CyberREN system:

• Patient Medical Records-VA, SORN 24VA19 (March 22, 2013)
• Veterans Health Information Systems and Technology Architecture (VistA) Records-VA, SORN 79VA10P2 (Oct. 31, 2012, as amended)
• National Patient Databases-VA, SORN 121VA19 (May 11, 2012, as amended)

The completion of this PIA will not result in change business processes or technology changes.

The system uses cloud technology.
Section 1. Characterization of the Information

The following questions are intended to define the scope of the information requested and collected as well as the reasons for its collection as part of the program, IT system, or technology being developed.

1.1 What information is collected, used, disseminated, created, or maintained in the system?

Identify and list all Sensitive Personal Information (SPI) that is collected and stored in the system, including Individually Identifiable Information (III), Individually Identifiable Health Information (IIHI), Protected Health Information (PHI), and Privacy-Protected Information. For additional information on these information types and definitions, please see VA Directives and Handbooks in the 6500 series (https://va.gov/vapubs/). If the system creates information (for example, a score, analysis, or report), list the information the system is responsible for creating.

If a requesting system receives information from another system, such as a response to a background check, describe what information is returned to the requesting system. This question is related to privacy control AP-1, Authority To Collect, and AP-2, Purpose Specification.

The information selected below must match the information provided in question 2.1 as well as the data elements columns in 4.1 and 5.1.

Please check any information listed below that your system collects, uses, disseminates, creates, or maintains. If additional SPI is collected, used, disseminated, created, or maintained, please list those in the text box below:

- ☒ Name
- ☒ Social Security Number
- ☒ Date of Birth
- ☒ Mother’s Maiden Name
- ☒ Personal Mailing Address
- ☒ Personal Phone Number(s)
- ☒ Personal Fax Number
- ☒ Personal Email Address
- ☒ Emergency Contact Information (Name, Phone Number, etc. of a different individual)
- ☒ Financial Account Information
- ☒ Health Insurance Beneficiary Numbers Account numbers
- ☒ Certificate/License numbers
- ☐ Vehicle License Plate Number
- ☒ Internet Protocol (IP) Address Numbers
- ☒ Current Medications
- ☒ Previous Medical Records
- ☒ Race/Ethnicity
- ☐ Tax Identification Number
- ☒ Medical Record Number
- ☒ Gender
- ☐ Integration Control Number (ICN)
- ☒ Military History/Service Connection
- ☒ Next of Kin
- ☒ Other Unique Identifying Information (list below)

The following Veteran information Personal Health Information (PHI) and Personally Identifiable Information (PII) data may be collected, processed and retained: demographics, primary contact,
guardian, veteran or primary subjects contact information, name, date of birth, SSN, mother’s maiden name, mailing address, zip code, phone number, fax number, email address, emergency contact information, financial account information, gender, physical description of person (including height, weight, eye color, hair color and more), military service connections, military history, age, next of kin, basic educational background, veteran benefit information, health insurance beneficiary and account numbers certificate/license number, vehicle license plate, family relation, names of family members and relationships, name and contact information of guardians for underage patients, medical information, previous medical records, medical diagnoses, procedures, test results, and prescriptions.

- Electronic Protected Health Information (ePHI)
- Military History
- Service Connection
- Service-Connected Disabilities
- Employment Information
- Veteran Dependent Information
- Education Information
- Disclosure requestor information
- Religious affiliation

PII Mapping of Components

CyberREN consists of two key components. Each component has been analyzed to determine if any elements of that component collect PII. The type of PII collected by cyberREN and the reasons for the collection of the PII are in the table below.

PII Mapped to Components

<table>
<thead>
<tr>
<th>Database Name of the information system collecting/storing PII</th>

be collected, processed and retained: demographics, primary contact, guardian, veteran or primary subjects contact information, name, date of birth, SSN, mother’s maiden name, mailing address, zip code, phone number, fax number, email address, emergency contact information, financial account information, gender, physical description of person (including height, weight, eye color, hair color and more), military service connections, military history, age, next of kin, basic educational background, veteran benefit
information, health insurance beneficiary and account numbers, family relation, names of family members and relationships, name and contact information of guardians for underage patients, medical information, previous medical records, medical diagnoses, procedures, test results, and prescriptions.

1.2 What are the sources of the information in the system?

List the individual, entity, or entities providing the specific information identified above. For example, is the information collected directly from the individual as part of an application for a benefit, or is it collected from other sources such as commercial data aggregators?

Describe why information from sources other than the individual is required. For example, if a program’s system is using data from a commercial aggregator of information or data taken from public Web sites, state the fact that this is where the information is coming from and then in question 1.3 indicate why the system is using this source of data.

If the system creates information (for example, a score, analysis, or report), list the system as a source of information.

This question is related to privacy controls DI-1, Data Quality, and IP-1, Consent.
VA Healthcare – VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) collects most information, including contact information, medical history, and financial data directly from the individual for benefits and enrollment. Additional medical information, such as the results of medical appointments, medical tests, prescriptions, and more, are entered into the patient’s medical record by facility medical personnel and administrative staff, as appropriate.

1.3 How is the information collected?

This question is directed at the means of collection from the sources listed in question 1.2. Information may be collected directly from an individual, received via electronic transmission from another system, or created by the system itself. Specifically, is information collected through technologies or other technologies used in the storage or transmission of information in identifiable form?

If the information is collected on a form and is subject to the Paperwork Reduction Act, give the form’s OMB control number and the agency form number.

This question is related to privacy controls DI-1, Data Quality, and IP-1, Consent.

Information is collected directly from patients. Information is collected using paper forms (such as the enrollment form for VA health care, VAF 10-10EZ (OMB#2900-0091), VAF 10-10EZR (OMB#2900-0091), VAF 10-5345 (not subject to the paper reduction act), VAF 10-5345a (not subject to the paper reduction act), or interviews and assessments with the individual.

There are many VA forms used by Veterans to apply for medical benefits. All such VHA benefit forms are located at http://www.va.gov/vaforms/. The URL of the associated privacy statement is: http://www.va.gov/privacy/. VHA forms can be downloaded from this site, filled in and printed to be delivered in paper form. All collected information is used to determine eligibility for benefits and/or provide specific services.

1.4 How will the information be checked for accuracy? How often will it be checked?

Discuss whether and how often information stored in the system is checked for accuracy. Is information in the system checked against any other source of information (within or outside your organization) before the information is used to make decisions about an individual? For example, is there a computer matching agreement in place with another government agency? For systems that receive data from internal data sources or VA IT systems, describe the system checks to ensure that data corruption has not occurred during transmission.

If the system checks for accuracy by accessing a commercial aggregator of information, describe this process and the levels of accuracy required by the contract.

This question is related to privacy controls DI-1, Data Quality, and DI-2, Data Integrity and Integrity Board.
Information obtained directly from the individual will be assumed to be accurate. Furthermore, individuals have the right to obtain access to their records and request correction to them when necessary. Patient demographic information as well as income verification matching information is completed by automated tools with connections to the Austin Automation Center. Practitioners review and sign all treatment information. Various staff review data obtained and Health Information Management staff assist with corrections.

1.5 What specific legal authorities, arrangements, and agreements defined the collection of information?

List the full legal authority for operating the system, specifically the authority to collect the information listed in question 1.1. Provide the authorities in a manner understandable to any potential reader, i.e., do not simply provide a legal citation; use statute names or regulations in addition to citations. Legal authorities include Federal laws, regulations, statutes, and Executive Orders.

This question is related to privacy control AP-1, Authority to Collect

VA Healthcare-VISN 4 (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) systems operate under the authority of Veterans’ Benefits, Title 38, United States Code (U.S.C.), Chapter 5, § 501(b), and Veteran’s Benefits, Title 38, U.S.C., Chapter 73, § 7301(b).

Additionally, the collection, processing, and dissemination of health information must follow the rules and regulations established by the:

- Privacy Act System of Records Routine Uses in Patient Medical Record – VA 24VA10P2

1.6 PRIVACY IMPACT ASSESSMENT: Characterization of the information

Consider the specific data elements collected and discuss the potential privacy risks and what steps, if any are currently being taken to mitigate those identified risks.

Consider the following Fair Information Practice Principles (FIPPs) when assessing the risk to individual privacy:

- Principle of Purpose Specification: Explain how the collection ties with the purpose of the underlying mission of the organization and its enabling authority.

- Principle of Minimization: Is the information directly relevant and necessary to accomplish the specific purposes of the program?
Principle of Individual Participation: Does the program, to the extent possible and practical, collect information directly from the individual?

Principle of Data Quality and Integrity: Are there policies and procedures for VA to ensure that personally identifiable information is accurate, complete, and current? This question is related to privacy control AR-1, Governance and Privacy Program, and AR-2, Privacy Impact and Risk Assessment.

Privacy Risk: Risks include data breach resulting in possible identity theft, loss or corruption of data, loss of confidence in the organization. VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) systems, inclusive of information collected in the CyberREN system, contains sensitive personal information – including social security numbers, names, and protected health information - on veterans. Due to the highly sensitive nature of this data, there is a risk that, if the data were accessed by an unauthorized individual or if the data was otherwise breached, serious harm or even identity theft may result.

Mitigation: Veterans Health Administration (VHA), VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington), deploys extensive security measures to protect the information from inappropriate use and/or disclosure. This is done by means of both access controls and training of all employees. VA Healthcare -VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) systems security measures include access control, configuration management, media protection, system and service acquisition, audit and accountability measures, contingency planning, personnel security, system and communication protection, awareness and training, identification authentication, physical and environmental protection, system information integrity, security assessment and authorization, incident response, risk assessment, program management, planning and maintenance. Privacy measures will include authority and purpose, accountability, audit and risk management, data quality and integrity, data minimization and retention, individual participation and redress, transparency, and use limitation. The users of the information are provided Privacy, HIPAA, and Rules of Behavior training on an annual basis. Each facility has a Chief Information Officer, Information Security Officer, and Privacy Officer on staff to assist and monitor in protecting the individual’s information. Users of the information are only given access to electronic and paper documents that are needed to complete their duty tasks.

Section 2. Uses of the Information

The following questions are intended to clearly delineate the use of information and the accuracy of the data being used.

2.1 Describe how the information in the system will be used in support of the program’s business purpose.

Identify and list each use (both internal and external to VA) of the information collected or maintained. This question is related to privacy control AP-2, Purpose Specification.
The use of information for day-to-day business needs applies to the VA Healthcare-VISN 4 (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) Medical Centers systems, inclusive of information collected in the CyberREN system.

The records and information (e.g., name, social security number, date of birth, mother’s maiden name, mailing address, zip code, phone number(s), fax number, email address, emergency contact information, financial account information, health insurance beneficiary numbers, certificate/license numbers, vehicle license plate number, Internet Protocol (IP) address numbers, current medications, previous medical records, race/ethnicity) may be used for statistical analysis to produce various management, workload tracking and follow-up reports; to track and evaluate the ordering and delivery of equipment, services and patient care; the planning, distribution and utilization of resources; the possession and use of equipment or supplies; the performance of vendors, equipment, and employees; and to provide clinical and administrative support to patient medical care.

Name: Used to identify the veteran or employee
Social Security Number: Used as official patient/employee identifier
Date of Birth: Used to identify the veteran or employee and determine age of patient
Mother’s Maiden Name: Used to identify the veteran or employee
Mailing Address: Used to for communication, billing purposes and calculate travel
Zip Code: Used for communication, billing purposes and calculate travel pay.
Phone Number(s): Used for communication, confirmation of appointments and conduct telehealth appointments.
Fax Number: Used to send forms of communication and records to business contacts, insurance companies and health care providers.
Email Address: Used for communication and myHealthevet secure communications.
Emergency Contact Information (Name, Phone Number, etc. of a different individual): Used in cases of emergent situations such as medical emergencies.
Financial Account Information: Used to calculate co-payments and VA health care benefit eligibility.
Health Insurance Beneficiary Numbers Account numbers: Used to communicate and bill third party health care plans.
Certificate/License numbers: Used to track and verify legal authority to practice medicine and licensure for health care workers in a particular area of expertise.
Internet Protocol (IP) Address Numbers: Used for configuration and network connections. Network Communication allows information to be transferred from one Information Technology system to another.
Current Medications: Used within the medical records for health care purposes/treatment, prescribing medications and allergy interactions.
Previous Medical Records: Used for continuity of care
Race/Ethnicity: Used for patient demographic information and for indicators of ethnicity-related diseases.
Next of Kin – Used in cases of emergent situations such as medical emergencies. Used when patient expires and in cases of patient incapacity.
Electronic Protected Health Information (ePHI) – Used for history of health care treatment during treatment and planning of treatment
Military History/Service Connection – Used to evaluate medical conditions that could be related to location of military time served and to determine VA healthcare eligibility and treatment.
Service-Connected Disabilities – Used to determine VA health care eligibility and treatment plans/programs.
Employment Information – Used to determine VA employment eligibility, Veteran contact, and financial verification
Veteran dependent information – Used to determine benefit support and emergency contact person Disclosure Requestor Information – Used to track and account for patient medical records released to requestors
Education Information – Used for demographic background information for patients and as a determining factor for VA employment in areas of expertise. Basic educational background, e.g. High School Diploma, college degree credentials.
Gender – Used as patient demographic identity, indicator for type of medical care or provider, and to determine the type of medical tests required for an individual
Religious affiliation – Use to identify clerical support for patients and staff members alike
Race/Ethnicity: Used for demographics information
Employment Information: Used to determine VA employment eligibility and for veteran contact, financial information.
Guardian Information: Used when the patient is unable to make decisions for themselves.
The data may be used for research purposes. The data may also be used for such purposes as assisting in the scheduling of tours of duties and job assignments of employees; the scheduling of patient treatment services including nursing care, clinic appointments, surgery, diagnostic and therapeutic procedures; the repair and maintenance of equipment; for follow-up activities to determine that the actions were accomplished and to evaluate the results; the registration of vehicles and the assignment and utilization of parking spaces; to plan, schedule, and maintain rosters of patients, employees and others attending or participating in sports, recreational or other events (e.g., National Wheelchair Games, concerts, picnics); for audits, reviews and investigations conducted by staff of the health care facility, the Network Directors Office, VA Central Office, and the VA Office of Inspector General (OIG); for quality assurance audits, internal and external reviews, investigations and inspections; for law enforcement investigations; and for personnel management, employee ratings, and performance evaluations.

2.2 What types of tools are used to analyze data and what type of data may be produced?

Many systems sift through large amounts of information in response to a user inquiry or programmed functions. Systems may help identify areas that were previously not obvious and need additional research by agents, analysts, or other employees. Some systems perform complex analytical tasks resulting in, among other types of data, matching, relational analysis, scoring, reporting, or pattern analysis. Describe any type of analysis the system conducts and the data that is created from the analysis.

If the system creates or makes available new or previously unutilized information about an individual, explain what will be done with the newly derived information. Will it be placed in the individual's existing record? Will a new record be created? Will any action be taken against or for the individual identified because of the newly derived data? If a new record is created, will the newly created information be accessible to Government employees who make determinations about the individual? If so, explain fully under which circumstances and by whom that information will be used.

This question is related to privacy controls DI-1, Data Quality, DI-2, Data Integrity and Integrity Board, and SE-1, Inventory of Personally Identifiable Information
The VA Healthcare-VISN 4 (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) Medical Centers systems, inclusive of information collected in the CyberREN system, uses statistics and analysis to create general reports that provide the VA a better understanding of patient care and needs.

These reports are used by the staff and management to identify, track, and trend performance in a variety of areas including access, patient satisfaction, financial indicators, and many others. This data is never placed into the record of any patients, but is often saved as part of staff performance such as:

- The number of patients enrolled, provider capacity, staffing ratios, patient wait times, etc.
- Beneficiary travel summary/benefits
- Workload and cost resources for various services, i.e., mental health, primary care, home dialysis, fee services, etc.
- Daily bed management activity
- Coding averages for outpatient/inpatient encounters
- Satisfaction of Healthcare Experience of Patients (SHEP) data as it pertains to customer satisfaction regarding outpatient/inpatient services
- Unique patient trends
- Clinic wait times

2.3 How is the information in the system secured?
2.3a What measures are in place to protect data in transit and at rest?
2.3b If the system is collecting, processing, or retaining Social Security Numbers, are there additional protections in place to protect SSNs?
2.3c How is PII/PHI safeguarded in accordance with OMB Memorandum M-06-15?

This question is related to security and privacy controls SC-9, Transmission Confidentiality, and SC-28, Protection of Information at Rest

SSNs are only available to certain users and are only available in configuration tables
- CyberREN communicates with Veterans Health Information Systems and Technology Architecture (VistA) using a Health Level 7 (HL7) feed through Integration Framework (DSIHW).
- Information is entered into CyberREN by the dialysis user, then that information is sent back to VistA/Computerized Patient Record System (CPRS) to create notes, lab orders, lab results, pharmacy orders, progress notes.
- Dialysis users are able to see patient information in CyberREN due to HL7 messages communicating the patient’s demographics, labs, meds, problem list, diagnoses, etc. from VistA/CPRS.
- CyberREN stores the patient’s SSN in a single data point within the Patient Demographics section of the application. CyberREN application does not display the SSN to the user. The CyberREN is encrypted FIPS 140-2
- This data point, along with the entirety of the CyberREN database, is FIPS 140-2 compliant.

2.4 PRIVACY IMPACT ASSESSMENT: Use of the information. How is access to the PII determined? Are criteria, procedures, controls, and responsibilities regarding access
documented? Does access require manager approval? Is access to the PII being monitored, tracked, or recorded? Who is responsible for assuring safeguards for the PII?

Describe any types of controls that may be in place to ensure that information is handled in accordance with the uses described above. Example: Describe if training for users of the project covers how to appropriately use information. Describe the disciplinary programs or system controls (i.e. denial of access) that are in place if an individual is inappropriately using the information.

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Is the PIA and SORN, if applicable, clear about the uses of the information?

**Principle of Use Limitation:** Is the use of information contained in the system relevant to the mission of the project?

This question is related to privacy control AR-4, Privacy Monitoring and Auditing, AR-5, Privacy Awareness and Training, and SE-2, Privacy Incident response.

The controls are in place to assure that the information is handled in accordance with the uses described above include mandatory online information security and HIPAA training; face-to-face training for all incoming employees conducted by the Information Security Officer and Privacy Officer; regular audits of accessions of sensitive information; and formal rounds during which there is personal examination of all areas within the facility to ensure information is being appropriately used and controlled.

Disciplinary policies are in place to address unauthorized and unapproved use of data and include the most appropriate of the following: re-training, re-education, removal of access privileges, counselling, admonishment, reprimand, suspension, and removal.

VA employees are required to report any potential privacy violations or breaches to their Information Security Officer (ISO) and Privacy Officer, and these reports are processed pursuant to VA Handbook 6500.2, Management of Security and Privacy Incidents. In addition, pursuant to the Privacy Act, the Department will review annually, the circumstances and actions of VA employees that resulted in VA being found civilly liable under Section (i) of the Privacy Act. Privacy Act, or an employee found criminally liable under the provisions of Section (i) of the Privacy Act. The purpose of this review is to determine the problem and find the most effective way to prevent recurrence.

VHA Privacy Compliance Assurance (PCA) monitors and audits compliance with privacy controls and VHA privacy policy on an ongoing basis through various mechanisms. PCA conducts virtual audits of privacy compliance of 5-7 VHA Health Care facilities annually. PCA requires an annual Facility Self-Assessment (FSA) by all VHA Health Care facilities on privacy compliance that is broken down into quarterly submissions.

In addition to the mandatory agency Privacy Awareness and Information Security and Rules of Behavior training for any VA employee with Network access, VHA mandates its Privacy and HIPAA Focused training for all employees who have access to PHI or VHA records, including in IT systems. This training must be taken on an annual basis and completed prior to the one-year anniversary date of the previous year’s training.
Access is determined by use of the ECAR system where program managers submit requests to Office of Information Technology (OI&T) for certain menu options based on the needs of their specific jobs or duties.

**Section 3. Retention of Information**

The following questions are intended to outline how long information will be retained after the initial collection.

3.1 What information is retained?

*Identify and list all information collected from question 1.1 that is retained by the system. This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal*

The following applies to the VA Healthcare-VISN 4 Medical Center (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) system, inclusive of information collected in the CyberREN system:

Information retained is based on national VA policies. Below is a list of information that may be retained.

Name
Social Security Number
Date of Birth
Mother’s Maiden Name
Mailing Address
Zip Code
Phone Numbers
Fax Numbers
Email Address
Emergency Contact Information
Financial Account Information
Health Insurance Beneficiary Account Numbers
Certificate/License Numbers
Previous medical records
Electronic Protected Health Information (ePHI)
Race/Ethnicity
Gender
Physical Description of Person
Military Service Connections
Military History
Age
Medical History
Next of Kin
Guardian Information
Criminal background information
Disclosure requestor information
Service-connected disabilities
Employment verification
Veteran dependent information
Internet Protocol address numbers
Education Information
Current medications

VA Healthcare VISN 4 Medical Center (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) follows national VA policies and records control schedules regarding information retention. The records include information concerning patients.

3.2 How long is information retained?

In some cases, VA may choose to retain files in active status and archive them after a certain period of time. State active file retention periods, as well as archived records, in number of years, for the information and record types. For example, financial data held within your system may have a different retention period than medical records or education records held within your system, please be sure to list each of these retention periods. If the system is using cloud technology, will it be following the NARA approved retention length and schedule?

The VA records officer should be consulted early in the development process to ensure that appropriate retention and destruction schedules are implemented.
This question is related to privacy control DM-2, Data Retention and Disposal.

The VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) will maintain VA data and records per the Department of Veterans Affairs, Veterans Health Administration Record Control Schedule (RCS) 10-1 and OIT RCS 005-1.

All information collected, stored, and used for healthcare and historical information follows the Record Control Schedule (RCS) 10-1 for VHA and (RCS) 005-1 for Office of Information and Technology retention guidelines, except for, temporary files. Temporary files, also known as working papers, are documents used to make the electronic entries of information or used to temporarily and destroyed when no longer needed by the user.

Medical records are retained for 75 years after the last date of activity. Personnel, administrative, and business records are retained for various amounts of time. The guidance for retention of records is found in the Department of Veterans Affairs, Veterans Health Administration Record Control Schedule (RCS 10-1) and the National Archives and Records Administration.

3.3 Has the retention schedule been approved by the VA records office and the National Archives and Records Administration (NARA)? If so please indicate the name of the records retention schedule.

An approved records schedule must be obtained for any IT system that allows the retrieval of a record via a personal identifier. The VA records officer will assist in providing a proposed schedule.
The schedule must be formally offered to NARA for official approval. Once NARA approves the proposed schedule, the VA records officer will notify the system owner. This question is related to privacy control DM-2, Data Retention and Disposal.

Medical Records Folder File or CHR: The Consolidated Health Record contains all professional and administrative material necessary to document the episodes of medical care and benefits provided to individuals by the VA health care system. The medical records folder will be retained in the VA health care facility until 3 years after last episode of care, and then converted to an inactive medical record. Once designated an inactive medical record, it will be moved to a VA records storage facility. Patient medical records are retained for a total of 75 years after the last episode of care. (Department of Veterans Affairs https://www.va.gov/vhapublications/RCS10/rcs10-1.pdf

3.4 What are the procedures for the elimination of SPI?

Explain how records are destroyed or eliminated at the end of the retention period. Please give the details of the process. For example, are paper records shredded on site, or by a shredding company and accompanied by a certificate of destruction, etc.? This question is related to privacy control DM-2, Data Retention and Disposal

Paper documents are destroyed to an unreadable state in accordance with the Department of Veterans’ Affairs VA Directive 6371, (April 8, 2014), www.va.gov/vapubs/viewPublication.asp?Pub_ID=742&FType=2

Paper records are either shredded by an employee using an on-site VA shredder that is compliant with VA Directive 6371 www.va.gov/vapubs/viewPublication.asp?Pub_ID=742&FType=2 or are shredded by a contractor with Certificates of Destruction provided and destruction methods are NAID compliant.

Electronic data and files of any type, including Protected Health Information (PHI), Sensitive Personal Information (SPI), Human Resources records, and more are destroyed in accordance with the Department of Veterans’ Affairs Handbook 6500.1, Electronic Media Sanitization (November 3, 2008). When required, this data is deleted from the file location and then permanently deleted from the deleted items location or recycle bin. Magnetic media is wiped and sent out for destruction per VA Handbook 6500.1. Digital media is shredded or sent out for destruction per VA Handbook 6500.1.

Information within the CyberREN system is destroyed by the disposition guidance of the RCS 10-1; maintain records for 75 years. On or before that time, VHA Records Management and Office of Information Technology will develop a plan for disposal or deletion. The plan will be routed for approval and implementations through VHA, Veterans Administration Central Office and the National Archives.

3.5 Does the system, where feasible, use techniques to minimize the risk to privacy by using PII for research, testing, or training?
Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. These uses of PII increase the risks associated with the unauthorized disclosure or misuse of the information. Please explain what controls have been implemented to protect PII used for testing, training and research. Have policies and procedures been developed to minimize the use of PII for testing, training, and research?

This question is related to privacy control DM-3, Minimization of PII Used in Testing, Training and Research.

All Research proposals are required to be reviewed and approved by the Facility Privacy Officer and Information Security Officer. Only the minimum necessary may be collected and used. Each protocol requires either a HIPAA Waiver, a HIPAA Authorization, or both. In addition, a Limited Data Set may be used only if the affected agencies enter into a Data Use Agreement. All research data collected for use must be in compliance with local policy and VA Handbook 1200.05, Research Activities. This includes testing.

Information used solely for training purposes must not contain patient identification. The VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) have test patients (not actual patients) that may be used for the purpose of testing and education. Any presentations that contain information based on patients must be routed through the Facility Privacy Officer to ensure all 18 HIPAA identifiers have been removed.

3.6 PRIVACY IMPACT ASSESSMENT: Retention of information

Discuss the risks associated with the length of time data is retained and what steps, if any, are currently being taken to mitigate those identified risks.

While we understand that establishing retention periods for records is a formal process, there are policy considerations behind how long a project keeps information. The longer a project retains information, the longer it needs to secure the information and assure its accuracy and integrity. The proposed schedule should match the requirements of the Privacy Act to keep the minimum amount of PII for the minimum amount of time, while meeting the Federal Records Act. The schedule should align with the stated purpose and mission of the system.

Consider the following FIPPs below to assist in providing a response:

Principle of Minimization: Does the project retain only the information necessary for its purpose? Is the PII retained only for as long as necessary and relevant to fulfill the specified purposes?

Principle of Data Quality and Integrity: Has the PIA described policies and procedures for how PII that is no longer relevant and necessary is purged?

This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

Privacy Risk: The information retained could be subject to breach, loss, or unintentional destruction from external, internal, and physical risks.
Mitigation: The Records Manager and Alternate Records Manager ensure data retention policies and procedures are followed in accordance with the VA Records Control Schedule RCS 10-1. When the retention data is reached for a record, the medical center carefully disposes of the data by the methods described in question 3.4. The Privacy Officer, Information Security Officer, and Chief Information Officer also monitor controls to mitigate any breaches of security and privacy.

Section 4. Internal Sharing/Receiving/Transmitting and Disclosure

The following questions are intended to define the scope of information sharing/receiving/transmitting within VA.

4.1 With which internal organizations is information shared/received/transmitted? What information is shared/received/transmitted, and for what purpose? How is the information transmitted?

NOTE: Question 3.9 (second table) on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any program offices, contractor-supported IT systems, and any other organization or IT system within VA with which information is shared.

State the purpose for the internal sharing. If you have specific authority to share the information, provide a citation to the authority.

For each interface with a system outside your program office, state what specific data elements (PII/PHI) are shared with the specific program office, contractor-supported IT system, and any other organization or IT system within VA.

Describe how the information is transmitted. For example, is the information transmitted electronically, by paper, or by some other means? Is the information shared in bulk, on a case-by-case basis, or does the sharing partner have direct access to the information?

This question is related to privacy controls AP-2, Purpose Specification, AR-3, Privacy Requirements for Contractors and Service Providers, AR-8, Accounting of Disclosures, TR-1, Privacy Notice, and UL-1, Internal Use.

Data Shared with Internal Organizations

<table>
<thead>
<tr>
<th>List the Program Office or IT System information is shared/received with</th>
<th>List the purpose of the information being shared/received with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program Office or IT system</th>
<th>Describe the method of transmittal</th>
</tr>
</thead>

- CyberREN communicates with Veterans Health Information Systems and Technology Architecture (VistA) using a Health Level 7 (HL7) standard.

- CyberREN stores the patient's SSN in a single data point within the Patient Demographics section of the application.

- CyberREN application does not display the SSN to the user.

- CyberREN is encrypted FIPS 140-2.
4.2 PRIVACY IMPACT ASSESSMENT: Internal sharing and disclosure

Discuss the privacy risks associated with the sharing of information within the Department and what steps, if any, are currently being taken to mitigate those identified risks. This question is related to privacy control UL-1, Internal Use.

**Privacy Risk:** The sharing of data is necessary for the medical care of individuals eligible to receive care at VHA and VISN 4 facilities. However, there is a risk that the data could be shared with an inappropriate VA organization or institution which would have a potentially catastrophic impact on privacy.

**Mitigation:** The potential harm is mitigated by access control, configuration management, media protection, system and service acquisition, audit and accountability measures, contingency planning, personnel security, system and communication protection, awareness and training, identification authentication, physical and environmental protection, system information integrity, security assessment and authorization, incident response, risk assessment, program management, planning and maintenance. Privacy measures will include authority and purpose, accountability, audit and risk management, data quality and integrity, data minimization and retention, individual participation and redress, transparency, and use limitation.

The Electronic Computer Access Request (ECAR) mitigates the risk of inadvertently sharing or disclosing information by assigning access permissions based on need to know.

The use of a Personal Identity Verification (PIV) card is implemented. This ensures the identity of the user by requiring two-factor authentication.

Electronic Permission Access System (ePAS) mitigates the risk of inadvertently sharing or disclosing information by assigning access permissions based on need to know.

Microsoft Outlook is also another tool that is used to share internal information within the organization. Risks are mitigated by using encryption methods to share sensitive information within the organization.

**Section 5. External Sharing/Receiving and Disclosure**

The following questions are intended to define the content, scope, and authority for information sharing external to VA, which includes Federal, State, and local governments, and the private sector.

5.1 With which external organizations (outside VA) is information shared/received? What information is shared/received, and for what purpose? How is the information transmitted and what measures are taken to ensure it is secure?
Is the sharing of information outside the agency compatible with the original collection? If so, is it covered by an appropriate routine use in a SORN? If not, please describe under what legal mechanism the IT system is allowed to share the information in identifiable form or personally identifiable information outside of VA.

NOTE: Question 3.10 on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any Federal, State, or local government agency or private sector organization with which information is shared.

For each interface with a system outside VA, state what specific data elements (PII/PHI) are shared with each specific partner.

What legal mechanisms, authoritative agreements, documentation, or policies are in place detailing the extent of the sharing and the duties of each party? For example, is the sharing of data compatible with your SORN? Then list the SORN and the applicable routine use from the SORN. Is there a Memorandum of Understanding (MOU), Computer Matching Agreement (CMA), or law that mandates the sharing of this information?

Describe how the information is transmitted to entities external to VA and what security measures have been taken to protect it during transmission.

This question is related to privacy control UL-2, Information Sharing with Third Parties

Data Shared with External Organizations

<table>
<thead>
<tr>
<th>List External Program Office or IT System information is shared/received with</th>
<th>List the purpose of information being shared/received/transmitted with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program or IT system</th>
<th>List the legal authority, binding agreement, SORN routine use, etc. that permit external sharing (can be more than one)</th>
<th>List the method of transmission and the measures in place to secure data</th>
</tr>
</thead>
<tbody>
<tr>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

5.2 PRIVACY IMPACT ASSESSMENT: External sharing and disclosure

Discuss the privacy risks associated with the sharing of information outside the Department and what steps, if any, are currently being taken to mitigate those identified risks.
Discuss whether access controls have been implemented and whether audit logs are regularly reviewed to ensure appropriate sharing outside of the Department. For example, is there a Memorandum Of Understanding (MOU), contract, or agreement in place with outside agencies or foreign governments.

Discuss how the sharing of information outside of the Department is compatible with the stated purpose and use of the original collection.

This question is related to privacy control AR-2, Privacy Impact and Risk Assessment, AR-3, Privacy Requirements for Contractors and Service Providers, and AR-4, Privacy Monitoring and Auditing

Follow the format below:

**Privacy Risk:** N/A

**Mitigation:** N/A

The cyberREN system does not share information with external systems

---

Section 6. Notice

The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information.

6.1 Was notice provided to the individual before collection of the information? If yes, please provide a copy of the notice as an appendix. (A notice may include a posted privacy policy, a Privacy Act notice on forms, or a system of records notice published in the Federal Register.) If notice was not provided, why not?

This question is directed at the notice provided before collection of the information. This refers to whether the person is aware that his or her information is going to be collected. A notice may include a posted privacy policy, a Privacy Act statement on forms, or a SORN published in the Federal Register. If notice was provided in the Federal Register, provide the citation.

If notice was not provided, explain why. If it was provided, attach a copy of the current notice.

Describe how the notice provided for the collection of information is adequate to inform those affected by the system that their information has been collected and is being used appropriately.

Provide information on any notice provided on forms or on Web sites associated with the collection. This question is related to privacy control TR-1, Privacy Notice, and TR-2, System of Records Notices and Privacy Act Statements, and TR-3, Dissemination of Privacy Program Information.

VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) provides notice of information collection in several ways. The initial method of notification is in
person during individual interviews or in writing via the Privacy Act statement on forms and applications completed by the individual.

Additional notice is provided through this Privacy Impact Assessment, which is available online, as required by the eGovernment Act of 2002, Pub.L. 107-347 §208(b)(1)(B)(iii), the Department of Veterans Affairs and the following VA System of Record Notices (SORNs) which are published in the Federal Register and available online:

- Patient Medical Records-VA, SORN 24VA19 (March 22, 2013)
- Veterans Health Information Systems and Technology Architecture (VistA) Records-VA, SORN 79VA10P2 (Oct. 31, 2012, as amended), 79VA19
- National Patient Databases-VA, SORN 121VA19 (May 11, 2012, as amended)

6.2 Do individuals have the opportunity and right to decline to provide information? If so, is a penalty or denial of service attached?

This question is directed at whether the person from or about whom information is collected can decline to provide the information and if so, whether a penalty or denial of service is attached. This question is related to privacy control IP-1, Consent, IP-2, Individual Access, and IP-3, Redress

Yes, individuals do have an opportunity to decline to provide information at any time, however, the VHA may not be able to enroll the Veteran. There is no penalty for declining information. The Notice of Privacy Practices states that the Veteran has the right to request a restriction of the use and disclosure of information; however, under 45 CFR § 164.522(a)(1)(vi) the VHA is not required to agree to such a restriction. Employees and VA contractors are also required to provide requested information to maintain employment or contracts with the VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington).

6.3 Do individuals have the right to consent to particular uses of the information? If so, how does the individual exercise the right?

This question is directed at whether an individual may provide consent for specific uses or the consent is given to cover all uses (current or potential) of his or her information. If specific consent is required, how would the individual consent to each use? This question is related to privacy control IP-1, Consent

The Veteran has the right to consent to use of U.S.C. 7332 (Alcohol and Substance Abuse, HIV, and Sickle Cell Anemia) and medical records by completing the VA Form 10-5345 to authorized third parties information. Treatment, payment, and healthcare operations will require Veteran authorization for the use of U.S.C. 7332 information.

Employees may consent to specific uses of their information on VA Form 3288 for non-medical records or VA Form 10-5345 for Employee Health Records.

6.4 PRIVACY IMPACT ASSESSMENT: Notice

Version Date: October 1, 2021
Describe the potential risks associated with potentially insufficient notice and what steps, if any, are currently being taken to mitigate those identified risks.

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Has sufficient notice been provided to the individual?

**Principle of Use Limitation:** Is the information used only for the purpose for which notice was provided either directly to the individual or through a public notice? What procedures are in place to ensure that information is used only for the purpose articulated in the notice?

*This question is related to privacy control TR-1, Privacy Notice, AR-2, Privacy Impact and Risk Assessment, and UL-1, Internal Use*

**Privacy Risk:** There is a risk that Veterans, employees, or general public may not be aware of the collection, maintenance, and dissemination of PII/PHI about them through the existence of the information systems.

**Mitigation:** This risk is mitigated by the common practice of providing the Notice of Privacy Practices (NOPP) when Veterans apply for benefits. Additionally, new NOPPs are mailed to beneficiaries on a yearly basis and periodic monitoring is performed to check that the signed acknowledgment form has been scanned into electronic records. Employees and contractors are required to review, sign and abide by the National Rules of Behavior on a yearly basis as required by VA Handbook 6500 as well as complete annual mandatory Information Security and Privacy Awareness training.

Additional mitigation is provided by making the System of Record Notices (SORNs) and Privacy Impact Assessment (PIA) available for review online, as discussed in question 6.1.

---

**Section 7. Access, Redress, and Correction**

The following questions are directed at an individual’s ability to ensure the accuracy of the information collected about him or her.

**7.1 What are the procedures that allow individuals to gain access to their information?**

*Cite any procedures or regulations your program has in place that allow access to information. These procedures, at a minimum, should include the agency’s FOIA/Privacy Act practices, but may also include additional access provisions. For example, if your program has a customer satisfaction unit, that information, along with phone and email contact information, should be listed in this section in addition to the agency’s procedures. See 5 CFR 294 and the VA FOIA Web page at http://www.foia.va.gov/ to obtain information about FOIA points of contact and information about agency FOIA processes.*
If the system is exempt from the access provisions of the Privacy Act, please explain the basis for the exemption or cite the source where this explanation may be found, for example, a Final Rule published in the Code of Federal Regulations (CFR).

If the system is not a Privacy Act system, please explain what procedures and regulations are in place that covers an individual gaining access to his or her information. This question is related to privacy control IP-2, Individual Access, and AR-8, Accounting of Disclosures.

Individuals follow procedures to gain access to their information under the guidelines of the Privacy Act, Freedom of Information Act (FOIA), and Health Insurance Portability and Accountability Act (HIPAA).

Individuals seeking information regarding access to and contesting of records in this system may write, call or visit VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington). When requesting access to one’s own records, patients are asked to complete VA Form 10-5345a: Individuals’ Request for a Copy of their Own Health Information, which can be obtained from the medical center or online at https://www.va.gov/vaforms/medical/pdf/VHA%20Form%2010-5345a%20Fill-revision.pdf

Additionally, veterans and their dependents can gain access to their Electronic Health Record (EHR) by enrolling in the MyHealthVet program, VA’s online personal health record. More information about MyHealthVet at https://www.myhealth.va.gov/index.html.

In addition to the procedures discussed above, the SORNs listed in question 6.1 each address record access, redress, and correction. Links to all VA SORNs can be found at http://www.rms.oit.va.gov/sor_records.asp.

7.2 What are the procedures for correcting inaccurate or erroneous information?

Describe the procedures and provide contact information for the appropriate person to whom such issues should be addressed. If the correction procedures are the same as those given in question 7.1, state as much. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

The Veteran should provide a written request, with signature, for correcting of inaccurate or erroneous information to the Privacy Officer by writing to: Privacy Office, VISN 4 1010 Delafild Rd., Pittsburgh, PA 15215, or by calling (412) 822-1123 or (412) 822-1124. The Privacy Officer will route the request for the correction of inaccurate or erroneous information in medical records to the author of the note. If the correction is denied by the author, the denial letter is routed to the Director’s Office for concurrence and signature.

If corrections are needed for legal name, date of birth, or Social Security Number (SSN) changes, Patient Registration would process the request requiring a valid driver’s license, state identification, passport, military ID, or a letter from the Social Security Administration stating the changes and a wet signature from the individual requesting the change. The Privacy Officer reviews and approves all these changes as well.
7.3 How are individuals notified of the procedures for correcting their information?

How are individuals made aware of the procedures for correcting his or her information? This may be through notice at collection or other similar means. This question is meant to address the risk that even if procedures exist to correct information, if an individual is not made fully aware of the existence of those procedures, then the benefits of the procedures are significantly weakened. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

The Notice of Privacy Practices explains the Veteran’s right to request a correction to inaccurate, erroneous, untimely, or incomplete information. VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington), Community Based Outpatient Clinic (CBOC) staff and providers are educated to refer the Veteran to the Privacy Officer for requests to correct their records. At the time of the request the individual is sent an acknowledgement letter and they are sent a letter at the completion of processing regarding the outcome of the requested correction.

7.4 If no formal redress is provided, what alternatives are available to the individual?

Redress is the process by which an individual gains access to his or her records and seeks corrections or amendments to those records. Redress may be provided through the Privacy Act and Freedom of Information Act (FOIA), and also by other processes specific to a program, system, or group of systems. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

Example: Some projects allow users to directly access and correct/update their information online. This helps ensure data accuracy.

Redress is provided through the Privacy Act for the individual to view and request correction to the inaccurate or erroneous information. If the request is denied, the individual to appeal the decision by writing to the Office of General Counsel (024); Department of Veterans Affairs; 810 Vermont Avenue, N.W.; Washington, D.C. 20420.

The Privacy Act and HIPAA permit the individual to also complete a Statement of Disagreement to the information that was denied correction. The facility would be able to include a rebuttal to the Statement of Disagreement. The Statement of Disagreement, rebuttal, and denial letter would be attached to the information that was requested to be corrected and would be released with the information at any time the information was authorized for release.

7.5 PRIVACY IMPACT ASSESSMENT: Access, redress, and correction

Discuss what risks there currently are related to the Department’s access, redress, and correction policies and procedures for this system and what, if any, steps have been taken to mitigate those risks. For example, if a project does not allow individual access, the risk of inaccurate data needs to be discussed in light of the purpose of the project. For example, providing access to ongoing law
enforcement activities could negatively impact the program’s effectiveness because the individuals involved might change their behavior.

Consider the following FIPPs below to assist in providing a response:

Principle of Individual Participation: Is the individual provided with the ability to find out whether a project maintains a record relating to him?

Principle of Individual Participation: If access and/or correction is denied, then is the individual provided notice as to why the denial was made and how to challenge such a denial?

Principle of Individual Participation: Is there a mechanism by which an individual is able to prevent information about him obtained for one purpose from being used for other purposes without his knowledge?

This question is related to privacy control IP-3, Redress.

Follow the format below:

Privacy Risk: There is a risk of an individual not receiving notifications pertaining to appointments, medications, test results, and benefit information when the record contains incorrect information. Incorrect information documented in a record could result in improper healthcare diagnosis and treatment.

Mitigation: VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) mitigates the risk of incorrect information in an individual’s records by authenticating information when possible using the resources discussed in question 1.5. Additionally, VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) staff verifies information in medical records and corrects information identified as incorrect during each patient’s medical appointments. Additionally, staff within VISN 4 are informed of the importance of maintaining compliance with VA Release of Information (ROI) policies and procedures and about the importance of remaining alert to information correction requests. An individual’s identity is confirmed in requesting access, redress, and correction of information through legal authority (Power of Attorney (POA), Guardian, Next of Kin), photo identification and/or wet signature, which protect the information from being used without the individual’s knowledge. Appeal rights are given to an individual upon denial of a correction.

Section 8. Technical Access and Security

The following questions are intended to describe technical safeguards and security measures.

8.1 What procedures are in place to determine which users may access the system, and are they documented?

Describe the process by which an individual receives access to the system.

Identify users from other agencies who may have access to the system and under what roles these individuals have access to the system. Who establishes the criteria for what PII can be shared?
Describe the different roles in general terms that have been created to provide access to the system. For example, certain users may have "read-only" access while others may be permitted to make certain amendments or changes to the information.

This question is related to privacy control AR-7, Privacy-Enhanced System Design and Development.

Individuals receive access to VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) systems by employment in the VA, trainee, Without Compensation (WOC) or volunteer status, or upon being awarded a contract that requires access to our systems. An individual is assigned menu options and keys delegated by the type of access they need to complete their duty tasks. The supervisor maintains a functional category form on employees that is reviewed annually to ensure proper menu options and keys are delegated for the employee to complete duty tasks. Keys and menu options are not given if not required by the employee’s duty task. Monitors and audits are completed on the functional categories by the Privacy Officers and Information Security Officers. Semi-annual reviews of computer access including CyberREN menus and keys are conducted by each service line/department through Electronic Computer Access Requests (ECAR) and approved by the Chief Information Officer (CIO) and ISO. Once access is granted, individuals can log into the system(s) through dual authentication, i.e., a PIV card with a complex password combination. Once inside the system, individuals are authorized to access information on a need-to-know basis.

Strict physical security control measures are enforced to ensure that disclosure to these individuals is also based on this same principle. Generally, VA file areas are locked after normal duty hours and the facilities are protected from outside access by the Federal Protective Service, VA Police and Security Service or other security personnel.

8.2 Will VA contractors have access to the system and the PII? If yes, what involvement will contractors have with the design and maintenance of the system? Has a contractor confidentiality agreement, Business Associate Agreement (BAA), or a Non-Disclosure Agreement (NDA) been developed for contractors who work on the system? If so, how frequently are contracts reviewed and by whom? Describe the necessity of the access provided to contractors to the system and whether clearance is required. If Privacy Roles and Responsibilities have been established to restrict certain users to different access levels, please describe the roles and associated access levels. Explain the need for VA contractors to have access to the PII.

This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

Contractors will only have access to the VA Healthcare-VISN 4 Medical Centers (Pittsburgh, Philadelphia, Wilkes-Barre, Wilmington) CyberREN system on a need-to-know basis in the performance of their contracted assignments/task. Access to the CyberREN system must be specified in the contract. VA contractors that have access to the computer system are only delegated keys and menu functions needed to complete their duty task. They are required to complete annual Privacy,
Information Security, and Rules of Behavior training. Contractors having access to PHI/PII may be required to complete a Business Associate Agreement. Contracts are reviewed on an annual basis by the Contracting Officer Representative (COR). The Privacy Officer and Information Security Officer monitor that the annual Privacy, Information Security, and Rules of Behavior training is completed by contractors.

8.3 Describe what privacy training is provided to users either generally or specifically relevant to the program or system?

VA offers privacy and security training. Each program or system may offer training specific to the program or system that touches on information handling procedures and sensitivity of information. Please describe how individuals who have access to PII are trained to handle it appropriately. This question is related to privacy control AR-5, Privacy Awareness and Training.

All users including employees, trainees, WOCs, volunteers and contractors are required to take annual Privacy, Information Security, and Rules of Behavior Training through the Talent Management System (TMS) course 10176 VA Privacy and Information Security Awareness and Rule of Behavior and 10203 Privacy and HIPAA Focused Training. In addition, all new employees receive face-to-face training by the facility Privacy Officer and Information Security Officer during new employee orientation. The Privacy and Information Security Officers also perform subject-specific training on an as needed basis

8.4 Has Authorization and Accreditation (A&A) been completed for the system?

If Yes, provide:

1. The Security Plan Status,
2. The Security Plan Status Date,
3. The Authorization Status,
4. The Authorization Date,
5. The Authorization Termination Date,
6. The Risk Review Completion Date,
7. The FIPS 199 classification of the system (LOW/MODERATE/HIGH).

Please note that all systems containing SPI are categorized at a minimum level of “moderate” under Federal Information Processing Standards Publication 199.

If No or In Process, provide your Initial Operating Capability (IOC) date

1. The Security Plan Status, Up to date, available in eMASS; will be resigned during next RMF #5
2. The Security Plan Status Date, March 2, 2022
3. The Authorization Status, 180-DAY Authorization to Operate (ATO) granted on March 24, 2022, with conditions to complete for a longer ATO duration.
4. The Authorization Date, March 24, 2022
5. The Authorization Termination Date, September 20, 2022
6. The Risk Review Completion Date, July 12, 2022
7. The FIPS 199 classification of the system HIGH

Section 9 – Technology Usage
The following questions are used to identify the technologies being used by the IT system or project.

9.1 Does the system use cloud technology? If so, what cloud model is being utilized?

If so, Does the system have a FedRAMP provisional or agency authorization? If the system does use cloud technology, but does not have FedRAMP authorization, explain how the Cloud Service Provider (CSP) solution was assessed and what FedRAMP documents and processes were used for the assessment in order to comply with VA Handbook 6517. Types of cloud models include: Software as a Service (SaaS), Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Commercial off the Shelf (COTS).

This question is related to privacy control UL-1, Information Sharing with Third Parties.

Note: For systems utilizing the VA Enterprise Cloud (VAEC), no further responses are required after 9.1.

DSS CyberREN is hosted in VAEC Azure

9.2 Does the contract with the Cloud Service Provider, Contractors and VA customers establish who has ownership rights over data including PII? (Provide contract number and supporting information about PII/PHI from the contract)

This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

<<ADD ANSWER HERE>>

9.3 Will the CSP collect any ancillary data and if so, who has ownership over the ancillary data?

Per NIST 800-144, cloud providers hold significant details about the accounts of cloud consumers that could be compromised and used in subsequent attacks. Ancillary data also involves information the cloud provider collects or produces about customer-related activity in the cloud. It includes data collected to meter and charge for consumption of resources, logs and audit trails, and other such metadata that is generated and accumulated within the cloud environment.
9.4 NIST 800-144 states, “Organizations are ultimately accountable for the security and privacy of data held by a cloud provider on their behalf.” Is this principle described in contracts with customers? Why or why not?

What are the roles and responsibilities involved between the organization and cloud provider, particularly with respect to managing risks and ensuring organizational requirements are met?

This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

<<ADD ANSWER HERE>>

9.5 If the system is utilizing Robotics Process Automation (RPA), please describe the role of the bots.

Robotic Process Automation is the use of software scripts to perform tasks as an automated process that executes in parallel with or in place of human input. For example, will the automation move or touch PII/PHI information. RPA may also be referred to as “Bots” or Artificial Intelligence (AI).
