Abstract

The abstract provides the simplest explanation for “what does the system do?” and will be published online to accompany the PIA link.

MuleSoft is a Platform as a Service hosted within the AWS GovCloud environment. MuleSoft’s Anypoint Platform is a hybrid platform for designing, developing and managing APIs and integrations. Uniquely built as a single solution, it includes integration Platform as a Service (iPaaS) functionality which provides users with enterprise messaging, advanced user and role based management, services/tools for providing API and integration analytics and management, API design and publishing tools, and the ability to share and collaborate on API specifications, code snippets and templates of best practices. MuleSoft ESB at VA is used to retrieve real time information between SalesForce and VA systems via API.

Overview

The overview is the most important section of the PIA. A thorough and clear overview gives the reader the appropriate context to understand the responses in the PIA. The overview should contain the following elements:

- The IT system name and the name of the program office that owns the IT system.
- The business purpose of the program, IT system, or technology and how it relates to the program office and agency mission.
- Indicate the ownership or control of the IT system or project.
- The expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual.
- A general description of the information in the IT system and the purpose for collecting this information.
- Any information sharing conducted by the IT system. A general description of the modules and subsystems, where relevant, and their functions.
- Whether the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites.
- A citation of the legal authority to operate the IT system.
- Whether the completion of this PIA will result in circumstances that require changes to business processes.
- Whether the completion of this PIA could potentially result in technology changes.
- If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval? If the system is using cloud technology, does the SORN for the system cover cloud usage or storage?

An overview of MuleSoft-e solution is provided as follows:

- The IT system name and the name of the program office that owns the IT system: MuleSoft Cloud Enterprise (MuleSoft-e) owned in collaboration between Veterans Affairs Office of Information and
Technology (OI&T), Development, Security, and Operations (DevSecOps), Digital Transformation Center (DTC), and Veterans Affairs Central Office (VACO).

• The business purpose of the program, IT system, or technology and how it relates to the program office and agency mission: MuleSoft-e is a Platform-as-a-Service (PaaS) development environment that supports Veterans Affairs Central Office (VACO). VA MuleSoft-e is an enterprise-wide system. VA Mulesoft-e System Administrators, and personnel delegated by the administrator, have access permissions that allow the user to access the platform Setup. The platform setup contains options to customize MuleSoft-e and build, deploy, and manage integrations.

• The expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual: VA MuleSoft-e processes information from Veterans or dependents, VA employees, and VA contractors. Program officials have identified the minimum PII data elements required to be processed by MuleSoft-e system. The data elements will be processed from VA System using automation via application programming interfaces (APIs) to support specific VA business process and the subset of the PII VA is authorized to collect. The legal authority to use or collect SSNs is Executive Order 9397.

• If your system is a regional GSS, VistA, or LAN, include a list of the hospitals/medical centers, or other regional offices that fall under your system. Additionally, what region is the system under?: MuleSoft-e is an enterprise-wide system.

• A general description of the information in the IT system: In accordance with the VA Office of Information and Technology (OIT) guidance, MuleSoft-e will be deployed in AWS being managed by VACO. MuleSoft-e provides critical integration services back into the VA legacy systems to provide the interface for modules to work directly with the VA Systems.

• Any information sharing conducted by the IT system. A general description of the modules and subsystems, where relevant, and their functions: MuleSoft-e consists of several key components called APIs. Each API will be analyzed to determine if any elements of that module process PII and each one will have at a minimum its own PTA and a PIA when required. As new integrations are added to the MuleSoft-e environment, they will be required to have these documents completed before being authorized to operate.

• Whether the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites: The primary site will be the Amazon Web Services (AWS) GovCloud (West) region. The security controls protecting the PII data processed within MuleSoft-e are documented in the approved MuleSoft-e Authority To Operate (ATO). The specific security controls leveraged by MuleSoft-e, in addition to a detailed description of the MuleSoft-e security boundaries, are documented in the System Security Plan (SSP).

• A citation of the legal authority to operate the IT system: MuleSoft-e cites the following legal authority references:
  * To obtain package, agency employees and contractors must complete OMB MAX registration form. The package name is MuleSoft Government Cloud FedRAMP and package ID is FR1818161169
  * Authority to Operate (ATO) for MuleSoft-e was authorized on April 30, 2020 and valid through April 29, 2023.

• Whether the completion of this PIA will result in circumstances that require changes to business processes: This PIA alone will not result in circumstances that require changes to business processes.
• Whether the completion of this PIA could potentially result in technology changes: MuleSoft-e technologies were selected before this PIA was completed. PIA completion is not expected to result in technology changes.
• If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval?: MuleSoft-e is an existing system. However, the System Owner confirmed MuleSoft-e is a platform technology and not a system of record. Individual applications built on the platform will require individual SORNs.

Section 1. Characterization of the Information

The following questions are intended to define the scope of the information requested and collected as well as the reasons for its collection as part of the program, IT system, or technology being developed.

1.1 What information is collected, used, disseminated, created, or maintained in the system?

Identify and list all Sensitive Personal Information (SPI) that is collected and stored in the system, including Individually Identifiable Information (III), Individually Identifiable Health Information (IIHI), Protected Health Information (PHI), and Privacy-Protected Information. For additional information on these information types and definitions, please see VA Directives and Handbooks in the 6500 series (https://www.va.gov/vapubs/). If the system creates information (for example, a score, analysis, or report), list the information the system is responsible for creating.

If a requesting system receives information from another system, such as a response to a background check, describe what information is returned to the requesting system.
This question is related to privacy control AP-1, Authority To Collect, and AP-2, Purpose Specification.

The information selected below must match the information provided in question 2.1 as well as the data elements columns in 4.1 and 5.1.

Please check any information listed below that your system collects, uses, disseminates, creates, or maintains. If additional SPI is collected, used, disseminated, created, or maintained, please list those in the text box below:

- [ ] Name
- [ ] Social Security Number
- [ ] Date of Birth
- [ ] Mother’s Maiden Name
- [X] Personal Mailing Address
- [ ] Personal Phone Number(s)
- [ ] Personal Fax Number
- [ ] Personal Email Address
- [ ] Emergency Contact Information (Name, Phone Number, etc. of a different individual)
- [ ] Financial Account Information
- [ ] Health Insurance Beneficiary Numbers
- [ ] Account numbers
- [ ] Certificate/License numbers
- [ ] Vehicle License Plate Number
- [ ] Internet Protocol (IP) Address Numbers
- [ ] Current Medications
- [ ] Previous Medical Records
- [ ] Race/Ethnicity
- [ ] Tax Identification Number
- [ ] Medical Record Number
- [ ] Gender
- [X] Integration Control Number (ICN)
- [ ] Military History/Service Connection
- [ ] Next of Kin
pii_mapping_of_components

MuleSoft-e consists of zero key components (databases). Each component has been analyzed to determine if any elements of that component collect PII. Data is not collected.

pii_mapped_to_components

Note: Due to the PIA being a public facing document, please do not include the server names in the table.

<table>
<thead>
<tr>
<th>Database Name of the information system collecting/storing PII</th>
<th>Does this system collect PII? (Yes/No)</th>
<th>Does this system store PII? (Yes/No)</th>
<th>Type of PII (SSN, DOB, etc.)</th>
<th>Reason for Collection/Storage of PII</th>
<th>Safeguards</th>
</tr>
</thead>
</table>

1.2 What are the sources of the information in the system?

List the individual, entity, or entities providing the specific information identified above. For example, is the information collected directly from the individual as part of an application for a benefit, or is it collected from other sources such as commercial data aggregators?

Describe why information from sources other than the individual is required. For example, if a program’s system is using data from a commercial aggregator of information or data taken from public Web sites, state the fact that this is where the information is coming from and then in question 1.3 indicate why the system is using this source of data.

If the system creates information (for example, a score, analysis, or report), list the system as a source of information. This question is related to privacy controls DI-1, Data Quality, and IP-1, Consent.

Sources of data include two-way integration from internal VA systems to include SalesForce-e, Austin Information Technology Center (AITC) Infrastructure Operations (IO), Financial Services Center (FSC), Digital Transformation Center (DTC) Integration Platform (DIP), Prosthetics Order Vendor Interface and Delivery Tracking Solution (POVIDTS), Beneficiary Travel Self Service System Assessing (BTSSS), VA Microsoft Dynamics (MS Dyn 360), and VA SalesForce Data Center (SFDC).

1.3 How is the information collected?

This question is directed at the means of collection from the sources listed in question 1.2. Information may be collected directly from an individual, received via electronic transmission from...
another system, or created by the system itself. Specifically, is information collected through
technologies or other technology used in the storage or transmission of information in identifiable form?

If the information is collected on a form and is subject to the Paperwork Reduction Act, give the
form’s OMB control number and the agency form number.
This question is related to privacy controls DI-1, Data Quality, and IP-1, Consent.

MuleSoft-e does not originate the collection of data. Sources of data are obtained through two-
way integration from the following internal VA systems: SalesForce-e, Austin Information
Technology Center (AITC) Infrastructure Operations (IO), Financial Services Center (FSC),
Digital Transformation Center (DTC) Integration Platform (DIP), Prosthetics Order Vendor
Interface and Delivery Tracking Solution (POVIDTS), Beneficiary Travel Self Service System
Assessing (BTSSS), VA Microsoft Dynamics (MS Dyn 360), and VA SalesForce Data Center
(SFDC).

1.4 How will the information be checked for accuracy? How often will it be checked?

Discuss whether and how often information stored in the system is checked for accuracy. Is
information in the system checked against any other source of information (within or outside your
organization) before the information is used to make decisions about an individual? For example, is
there a computer matching agreement in place with another government agency? For systems that
receive data from internal data sources or VA IT systems, describe the system checks to ensure that
data corruption has not occurred during transmission.

If the system checks for accuracy by accessing a commercial aggregator of information, describe this
process and the levels of accuracy required by the contract.
This question is related to privacy controls DI-1, Data Quality, and DI-2, Data Integrity and
Integrity Board.

Personally Identifiable Information is processed in the system and not maintained or retrievable.
It is used in transport as a Platform as a Service (PaaS) middleware.

1.5 What specific legal authorities, arrangements, and agreements defined the collection of
information?

List the full legal authority for operating the system, specifically the authority to collect the
information listed in question 1.1. Provide the authorities in a manner understandable to any
potential reader, i.e., do not simply provide a legal citation; use statute names or regulations in
addition to citations. Legal authorities include Federal laws, regulations, statutes, and Executive
Orders.
This question is related to privacy control AP-1, Authority to Collect

The legal authorities that authorize MuleSoft-e to process PII are as follows:
• 5 U.S.C. 552a, "Privacy Act," c. 1974
• 18 U.S.C. 1030 (a) (3), "Fraud and related activity in connection with computers."
• 38 U.S.C. 218, "Security and law enforcement on property under the jurisdiction of the Veterans Administration"
• OMB Circular A-130, Appendix III, Security of Federal Automated Information Systems
• Information Technology Management Reform Act of 1996 (also known as the Clinger-Cohen Act)
• Federal Information Security Management Act (FISMA) of 2002
• Executive Order 13103, Computer Software Privacy
• FIPS 199, Standards for Security Categorization of Federal Information and Information Systems
• FIPS 200, Minimum Security Requirements for Federal Information and Information Systems
• FIPS 201-1, Personal Identity Verification of Federal Employees and Contractors
• FIPS 140-2, Security Requirements for Cryptographic Module
• VA Handbook 6510, VA IDENTITY AND ACCESS MANAGEMENT, 2016
• VA Handbook 6500.2, Management of Data Breaches Involving Personal Information (SPI), 2016
• VA Directive 6066, Protected Health Information (PHI) and Business Associate Agreements Management, 2014

1.6 PRIVACY IMPACT ASSESSMENT: Characterization of the information
Consider the specific data elements collected and discuss the potential privacy risks and what steps, if any are currently being taken to mitigate those identified risks.

Consider the following Fair Information Practice Principles (FIPPs) when assessing the risk to individual privacy:

Principle of Purpose Specification: Explain how the collection ties with the purpose of the underlying mission of the organization and its enabling authority.

Principle of Minimization: Is the information directly relevant and necessary to accomplish the specific purposes of the program?

Principle of Individual Participation: Does the program, to the extent possible and practical, collect information directly from the individual?

Principle of Data Quality and Integrity: Are there policies and procedures for VA to ensure that personally identifiable information is accurate, complete, and current?
This question is related to privacy control AR-1, Governance and Privacy Program, and AR-2, Privacy Impact and Risk Assessment.

Follow the format below when entering your risk assessment:

Privacy Risk: The system collects Personally Identifiable Information (PII). Due to the highly sensitive nature of this data, there is a risk that, if the data were accessed by an unauthorized individual or otherwise breached, serious personal, professional or financial harm may result for the individuals affected.
Mitigation: The system employs a variety of security measures designed to ensure that the information is not inappropriately disclosed or released. Electric safeguards and security controls are in place as well as access control, awareness and training, audit and accountability, certification, accreditation, … The system operates under guidance provided in the National Institute of Standards and Technology (NIST) Special Publication 800-37 and specific VA directives.

Section 2. Uses of the Information

The following questions are intended to clearly delineate the use of information and the accuracy of the data being used.

2.1 Describe how the information in the system will be used in support of the program’s business purpose.

Identify and list each use (both internal and external to VA) of the information collected or maintained.

This question is related to privacy control AP-2, Purpose Specification.

MuleSoft-e is a Platform as a Service (PaaS) middleware that processes data. Data is not retained or retrievable. The types of data include Veteran Internal Control Number (ICN), Full Name, and Address.

2.2 What types of tools are used to analyze data and what type of data may be produced?

Many systems sift through large amounts of information in response to a user inquiry or programmed functions. Systems may help identify areas that were previously not obvious and need additional research by agents, analysts, or other employees. Some systems perform complex analytical tasks resulting in, among other types of data, matching, relational analysis, scoring, reporting, or pattern analysis. Describe any type of analysis the system conducts and the data that is created from the analysis.

If the system creates or makes available new or previously unutilized information about an individual, explain what will be done with the newly derived information. Will it be placed in the individual’s existing record? Will a new record be created? Will any action be taken against or for the individual identified because of the newly derived data? If a new record is created, will the newly created information be accessible to Government employees who make determinations about the individual? If so, explain fully under which circumstances and by whom that information will be used.

This question is related to privacy controls DI-1, Data Quality, DI-2, Data Integrity and Integrity Board, and SE-1, Inventory of Personally Identifiable Information

MuleSoft-e acts as an integration Platform as a Service (iPaaS). Data processed is not a permanent repository and is updated in internal VA source systems. Analysis will be conducted on source system.

2.3 How is the information in the system secured?
2.3a What measures are in place to protect data in transit and at rest?

2.3b If the system is collecting, processing, or retaining Social Security Numbers, are there additional protections in place to protect SSNs?

2.3c How is PII/PHI safeguarded in accordance with OMB Memorandum M-06-15?

This question is related to security and privacy controls SC-9, Transmission Confidentiality, and SC-28, Protection of Information at Rest

MuleSoft-e is a PaaS and processes data. Data is not retained and not at rest. Social Security Numbers are not processed. Remaining data elements are protected with FIPS 140-2 encryption. Supervisory assignment of functional categories restricting employee access to systems information.

2.4 PRIVACY IMPACT ASSESSMENT: Use of the information. How is access to the PII determined? Are criteria, procedures, controls, and responsibilities regarding access documented? Does access require manager approval? Is access to the PII being monitored, tracked, or recorded? Who is responsible for assuring safeguards for the PII?

Describe any types of controls that may be in place to ensure that information is handled in accordance with the uses described above. Example: Describe if training for users of the project covers how to appropriately use information. Describe the disciplinary programs or system controls (i.e. denial of access) that are in place if an individual is inappropriately using the information.

Consider the following FIPPs below to assist in providing a response:

* Principle of Transparency: Is the PIA and SORN, if applicable, clear about the uses of the information?

* Principle of Use Limitation: Is the use of information contained in the system relevant to the mission of the project?
This question is related to privacy control AR-4, Privacy Monitoring and Auditing, AR-5, Privacy Awareness and Training, and SE-2, Privacy Incident response.

All information processed with this system is handled in accordance with policies and procedures related to information security. All persons granted access to VA systems are granted that access based on their position, duties and a job related need to know. All individuals granted access to this system are required to have extensive training prior to receiving access and are required to recertify annually that he/she understands VA’s commitment to continuous readiness in information security. This annual training which is coalesced under the title of “Continuous Readiness in Information Security Program” (CRISP) is a VA initiative designed to increase security for information that is contained in this system, as well as all other VA systems. A cornerstone of CRISP is that all VA employees have a direct personal responsibility to safeguard the privacy of Veterans, spouses, beneficiaries and to ensure sensitive information remains protected.

This responsibility extends to VA contractors, volunteers at VA facilities, trainees and others who deal with Veterans' information at VA. CRISP builds upon VA's long-standing security policies by ensuring consistent centralized training on IT security, records security and privacy awareness. Most
of this web-based training is self-paced, interactive, and requires employees to answer questions correctly before they can proceed. The program also tracks the progress of employees and identifies trends where additional training may be necessary. Employees who fail to complete this annual training or adhere to the “Rules of Behavior” outlined in CRISP training will have their system access/IT privileges, and record access removed.

Section 3. Retention of Information

The following questions are intended to outline how long information will be retained after the initial collection.

3.1 What information is retained?

Identify and list all information collected from question 1.1 that is retained by the system. This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

MuleSoft-e is an integration Platform as a Service(iPaaS). Information is passed through but not retained.

3.2 How long is information retained?

In some cases VA may choose to retain files in active status and archive them after a certain period of time. State active file retention periods, as well as archived records, in number of years, for the information and record types. For example, financial data held within your system may have a different retention period than medical records or education records held within your system, please be sure to list each of these retention periods. If the system is using cloud technology, will it be following the NARA approved retention length and schedule?

The VA records officer should be consulted early in the development process to ensure that appropriate retention and destruction schedules are implemented. This question is related to privacy control DM-2, Data Retention and Disposal.

MuleSoft-e is an integration Platform as a Service(iPaaS). Information is passed through but not retained.

3.3 Has the retention schedule been approved by the VA records office and the National Archives and Records Administration (NARA)? If so please indicate the name of the records retention schedule.

An approved records schedule must be obtained for any IT system that allows the retrieval of a record via a personal identifier. The VA records officer will assist in providing a proposed schedule. The schedule must be formally offered to NARA for official approval. Once NARA approves the proposed schedule, the VA records officer will notify the system owner.
This question is related to privacy control DM-2, Data Retention and Disposal.

MuleSoft-e is an integration Platform as a Service (iPaaS). Information is passed through but not retained.

3.4 What are the procedures for the elimination of SPI?

*Explain how records are destroyed or eliminated at the end of the retention period. Please give the details of the process. For example, are paper records shredded on site, or by a shredding company and accompanied by a certificate of destruction, etc?*

This question is related to privacy control DM-2, Data Retention and Disposal

MuleSoft-e is an integration Platform as a Service (iPaaS). Information is passed through but not retained.

3.5 Does the system, where feasible, use techniques to minimize the risk to privacy by using PII for research, testing, or training?

*Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. These uses of PII increase the risks associated with the unauthorized disclosure or misuse of the information. Please explain what controls have been implemented to protect PII used for testing, training and research. Have policies and procedures been developed to minimize the use of PII for testing, training, and research?*

This question is related to privacy control DM-3, Minimization of PII Used in Testing, Training and Research

The use of PII during research, testing, and training is reduced when possible to minimize risk. PII is not used in research. PII is minimally used in testing and training when de-identifier data is not able to be used due to system constraints. Instances of testing and training that contain PII, adherence to VA Handbook 6500 is followed.

3.6 PRIVACY IMPACT ASSESSMENT: Retention of information

*Discuss the risks associated with the length of time data is retained and what steps, if any, are currently being taken to mitigate those identified risks.*

While we understand that establishing retention periods for records is a formal process, there are policy considerations behind how long a project keeps information. The longer a project retains information, the longer it needs to secure the information and assure its accuracy and integrity. The proposed schedule should match the requirements of the Privacy Act to keep the minimum amount of PII for the minimum amount of time, while meeting the Federal Records Act. The schedule should align with the stated purpose and mission of the system.

Consider the following FIPPs below to assist in providing a response:

*Principle of Minimization:* Does the project retain only the information necessary for its purpose? Is the PII retained only for as long as necessary and relevant to fulfill the specified purposes?
Principle of Data Quality and Integrity: Has the PIA described policies and procedures for how PII that is no longer relevant and necessary is purged?
This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

Privacy Risk: PII is processed but not retained or retrievable. Hardware loss or theft is a risk.

Mitigation: The privacy risk is mitigated by the security controls in place for MuleSoft-e. VA Handbook 6500 and 6301 as well as NIST 800-53 moderate impact defined set of controls are followed.

Section 4. Internal Sharing/Receiving/Transmitting and Disclosure
The following questions are intended to define the scope of information sharing/receiving/transmitting within VA.

4.1 With which internal organizations is information shared/received/transmitted? What information is shared/received/transmitted, and for what purpose? How is the information transmitted?

NOTE: Question 3.9 (second table) on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any program offices, contractor-supported IT systems, and any other organization or IT system within VA with which information is shared.

State the purpose for the internal sharing. If you have specific authority to share the information, provide a citation to the authority.

For each interface with a system outside your program office, state what specific data elements (PII/PHI) are shared with the specific program office, contractor-supported IT system, and any other organization or IT system within VA.

Describe how the information is transmitted. For example, is the information transmitted electronically, by paper, or by some other means? Is the information shared in bulk, on a case-by-case basis, or does the sharing partner have direct access to the information?
This question is related to privacy controls AP-2, Purpose Specification, AR-3, Privacy Requirements for Contractors and Service Providers, AR-8, Accounting of Disclosures, TR-1, Privacy Notice, and UL-1, Internal Use.

4.2 PRIVACY IMPACT ASSESSMENT: Internal sharing and disclosure

Discuss the privacy risks associated with the sharing of information within the Department and what steps, if any, are currently being taken to mitigate those identified risks. This question is related to privacy control UL-1, Internal Use.

**Privacy Risk:** Privacy information may be released to unauthorized individuals.

**Mitigation:** All personnel with access to Veteran’s information are required to complete the VA Privacy and Information Security Awareness training and Rules of Behavior annually. MuleSoft adheres to all information security requirements instituted by the VA Office of Information Technology (OIT). Information is shared in accordance with VA Handbook 6500. Windows and Unix access controls are provided by VA’s Infrastructure Operations (IO), along with the following security controls: Audit and Accountability, Awareness Training, Security Assessment and Authorization, Incident Response, Personnel Security, and Identification and Authentication.

**Section 5. External Sharing/Receiving and Disclosure**

The following questions are intended to define the content, scope, and authority for information sharing external to VA, which includes Federal, State, and local governments, and the private sector.

**5.1 With which external organizations (outside VA) is information shared/received? What information is shared/received, and for what purpose? How is the information transmitted and what measures are taken to ensure it is secure?**

Is the sharing of information outside the agency compatible with the original collection? If so, is it covered by an appropriate routine use in a SORN? If not, please describe under what legal mechanism the IT system is allowed to share the information in identifiable form or personally identifiable information outside of VA.

**NOTE:** Question 3.10 on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any Federal, State, or local government agency or private sector organization with which information is shared.

<table>
<thead>
<tr>
<th>List the Program Office or IT System information is shared/received with</th>
<th>List the purpose of the information being shared/received with the specified program office or IT system</th>
<th>List the specific PHI/PHI data elements that are processed (shared/received/transmitted) with the Program Office or IT system</th>
<th>Describe the method of transmittal</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>
For each interface with a system outside VA, state what specific data elements (PII/PHI) are shared with each specific partner.

What legal mechanisms, authoritative agreements, documentation, or policies are in place detailing the extent of the sharing and the duties of each party? For example, is the sharing of data compatible with your SORN? Then list the SORN and the applicable routine use from the SORN. Is there a Memorandum of Understanding (MOU), Computer Matching Agreement (CMA), or law that mandates the sharing of this information?

Describe how the information is transmitted to entities external to VA and what security measures have been taken to protect it during transmission.

This question is related to privacy control UL-2, Information Sharing with Third Parties

<table>
<thead>
<tr>
<th>List External Program Office or IT System information is shared/received with</th>
<th>List the purpose of information being shared / received / transmitted with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program or IT system</th>
<th>List the legal authority, binding agreement, SORN routine use, etc. that permit external sharing (can be more than one)</th>

5.2 PRIVACY IMPACT ASSESSMENT: External sharing and disclosure

Discuss the privacy risks associated with the sharing of information outside the Department and what steps, if any, are currently being taken to mitigate those identified risks.
Discuss whether access controls have been implemented and whether audit logs are regularly reviewed to ensure appropriate sharing outside of the Department. For example, is there a Memorandum Of Understanding (MOU), contract, or agreement in place with outside agencies or foreign governments.

Discuss how the sharing of information outside of the Department is compatible with the stated purpose and use of the original collection.

*This question is related to privacy control AR-2, Privacy Impact and Risk Assessment, AR-3, Privacy Requirements for Contractors and Service Providers, and AR-4, Privacy Monitoring and Auditing.*

**Privacy Risk:** There is a risk that information may be shared with unauthorized VA Program, or individual.

**Mitigation:** The safeguards implemented to ensure data is not sent to the wrong VA organization are employee security privacy training and awareness and required reporting of suspicious activity. Use of Two-Factor Authentication (2FA), access for need to know basis, Personal Identification Numbers (PIN), encryption, and access authorization are all measures that are utilized.

### Section 6. Notice

The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information.

**6.1 Was notice provided to the individual before collection of the information?** If yes, please provide a copy of the notice as an appendix. (A notice may include a posted privacy policy, a Privacy Act notice on forms, or a system of records notice published in the Federal Register.) If notice was not provided, why not?

*This question is directed at the notice provided before collection of the information. This refers to whether the person is aware that his or her information is going to be collected. A notice may include a posted privacy policy, a Privacy Act statement on forms, or a SORN published in the Federal Register. If notice was provided in the Federal Register, provide the citation.*

If notice was not provided, explain why. If it was provided, attach a copy of the current notice.

Describe how the notice provided for the collection of information is adequate to inform those affected by the system that their information has been collected and is being used appropriately. Provide information on any notice provided on forms or on Web sites associated with the collection.

*This question is related to privacy control TR-1, Privacy Notice, and TR-2, System of Records Notices and Privacy Act Statements, and TR-3, Dissemination of Privacy Program Information.*

MuleSoft-e is a Platform as a Service (PaaS) and is considered middleware. Data is not collected but passed through the system. A System of Records Notice (SORN) is not required.

**6.2 Do individuals have the opportunity and right to decline to provide information?** If so, is a penalty or denial of service attached?
This question is directed at whether the person from or about whom information is collected can decline to provide the information and if so, whether a penalty or denial of service is attached.

This question is related to privacy control IP-1, Consent, IP-2, Individual Access, and IP-3, Redress.

MuleSoft-e is a Platform as a Service (PaaS) and is considered middleware. Data is not collected but passed through the system.

6.3 Do individuals have the right to consent to particular uses of the information? If so, how does the individual exercise the right?

This question is directed at whether an individual may provide consent for specific uses or the consent is given to cover all uses (current or potential) of his or her information. If specific consent is required, how would the individual consent to each use?

This question is related to privacy control IP-1, Consent.

MuleSoft-e is a Platform as a Service (PaaS) and is considered middleware. Data is not collected but passed through the system.

6.4 PRIVACY IMPACT ASSESSMENT: Notice

Describe the potential risks associated with potentially insufficient notice and what steps, if any, are currently being taken to mitigate those identified risks.

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Has sufficient notice been provided to the individual?

**Principle of Use Limitation:** Is the information used only for the purpose for which notice was provided either directly to the individual or through a public notice? What procedures are in place to ensure that information is used only for the purpose articulated in the notice?

This question is related to privacy control TR-1, Privacy Notice, AR-2, Privacy Impact and Risk Assessment, and UL-1, Internal Use.

**Privacy Risk:** MuleSoft-e is a Platform as a Service (PaaS) and is considered middleware. Data is not collected but passed through the system. Privacy information may be collected prior to providing written notice.

**Mitigation:** The VA mitigates this risk by providing Veterans and other beneficiaries with multiple forms of notice of information collection, retention and processing.

**Section 7. Access, Redress, and Correction**

The following questions are directed at an individual’s ability to ensure the accuracy of the information collected about him or her.
7.1 What are the procedures that allow individuals to gain access to their information?

Cite any procedures or regulations your program has in place that allow access to information. These procedures, at a minimum, should include the agency’s FOIA/Privacy Act practices, but may also include additional access provisions. For example, if your program has a customer satisfaction unit, that information, along with phone and email contact information, should be listed in this section in addition to the agency’s procedures. See 5 CFR 294 and the VA FOIA Web page at http://www.foia.va.gov to obtain information about FOIA points of contact and information about agency FOIA processes.

If the system is exempt from the access provisions of the Privacy Act, please explain the basis for the exemption or cite the source where this explanation may be found, for example, a Final Rule published in the Code of Federal Regulations (CFR).

If the system is not a Privacy Act system, please explain what procedures and regulations are in place that covers an individual gaining access to his or her information. This question is related to privacy control IP-2, Individual Access, and AR-8, Accounting of Disclosures.

MuleSoft-e is a Platform as a Service (PaaS) and is considered middleware. Data is not collected but passed through the system.

7.2 What are the procedures for correcting inaccurate or erroneous information?

Describe the procedures and provide contact information for the appropriate person to whom such issues should be addressed. If the correction procedures are the same as those given in question 7.1, state as much. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

MuleSoft-e is a Platform as a Service (PaaS) and is considered middleware. Data is not collected but passed through the system.

7.3 How are individuals notified of the procedures for correcting their information?

How are individuals made aware of the procedures for correcting his or her information? This may be through notice at collection or other similar means. This question is meant to address the risk that even if procedures exist to correct information, if an individual is not made fully aware of the existence of those procedures, then the benefits of the procedures are significantly weakened. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

MuleSoft-e is a Platform as a Service (PaaS) and is considered middleware. Data is not collected but passed through the system.
7.4 If no formal redress is provided, what alternatives are available to the individual?

Redress is the process by which an individual gains access to his or her records and seeks corrections or amendments to those records. Redress may be provided through the Privacy Act and Freedom of Information Act (FOIA), and also by other processes specific to a program, system, or group of systems.

This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

Example: Some projects allow users to directly access and correct/update their information online. This helps ensure data accuracy.

MuleSoft-e is a Platform as a Service (PaaS) and is considered middleware. Data is not collected but passed through the system.

7.5 PRIVACY IMPACT ASSESSMENT: Access, redress, and correction

Discuss what risks there currently are related to the Department’s access, redress, and correction policies and procedures for this system and what, if any, steps have been taken to mitigate those risks. For example, if a project does not allow individual access, the risk of inaccurate data needs to be discussed in light of the purpose of the project. For example, providing access to ongoing law enforcement activities could negatively impact the program’s effectiveness because the individuals involved might change their behavior.

Consider the following FIPPs below to assist in providing a response:

Principle of Individual Participation: Is the individual provided with the ability to find out whether a project maintains a record relating to him?

Principle of Individual Participation: If access and/or correction is denied, then is the individual provided notice as to why the denial was made and how to challenge such a denial?

Principle of Individual Participation: Is there a mechanism by which an individual is able to prevent information about him obtained for one purpose from being used for other purposes without his knowledge?

This question is related to privacy control IP-3, Redress.

Privacy Risk: MuleSoft-e is a Platform as a Service (PaaS) and is considered middleware. Data is not collected but passed through the system. There is a risk individuals may attempt to access information processed about them by the VA Office.

Mitigation: By publishing this PIA, the VA makes the public aware of the unique status of information processed on this platform. Furthermore, this document provides the point of contacts for members of the public who have questions or concerns.
Section 8. Technical Access and Security

The following questions are intended to describe technical safeguards and security measures.

8.1 What procedures are in place to determine which users may access the system, and are they documented?

Describe the process by which an individual receives access to the system.

Identify users from other agencies who may have access to the system and under what roles these individuals have access to the system. Who establishes the criteria for what PII can be shared?

Describe the different roles in general terms that have been created to provide access to the system. For example, certain users may have "read-only" access while others may be permitted to make certain amendments or changes to the information.

This question is related to privacy control AR-7, Privacy-Enhanced System Design and Development.

All individuals are subject to a background investigation before system access is granted. All individuals with system access are required to complete the VA Privacy and Information Security Awareness and Rules of Behavior training annually.

MuleSoft-e users have access privileges identified by their supervisors as needed to perform their assigned duties. The Requesting Official is responsible for ensuring that the user’s access is restricted to only those applications and functions that are required for the user to perform their assigned duties and that separation of duty has been applied as appropriate.

8.2 Will VA contractors have access to the system and the PII? If yes, what involvement will contractors have with the design and maintenance of the system? Has a contractor confidentiality agreement, Business Associate Agreement (BAA), or a Non-Disclosure Agreement (NDA) been developed for contractors who work on the system?

If so, how frequently are contracts reviewed and by whom? Describe the necessity of the access provided to contractors to the system and whether clearance is required. If Privacy Roles and Responsibilities have been established to restrict certain users to different access levels, please describe the roles and associated access levels. Explain the need for VA contractors to have access to the PII.

This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.
Contractors may have access to MuleSoft-e. All contractors sign the VA Rules of Behavior, just as VA Employees do, and they pass a Background Investigation prior to receiving access to VA Systems.

VA contract employee access is verified through the Contracting Officer’s Representative (COR) and other VA supervisory/administrative personnel before access is granted to any VA system. Contractor access is reviewed annually at a minimum. The contractors who provide support to the system are required to complete annual VA Privacy and Information Security and Rules of behavior training via the VA Talent Management System (TMS). All contractors are vetted using the VA background investigation process and must obtain the appropriate level background investigation for their role. Contractors with systems administrative access are required to complete additional role-based training prior to gaining system administrator access. Generally, contracts are reviewed at the start of the initiation phase of acquisitions and again during procurement of option years by the Contracting Officer, Information Security Officer, Privacy Officer, Contracting Officer Representative, Procurement Requestor/Program Manager and any other stakeholders required for approval of the acquisition. Contracts generally have an average duration of 1-3 years and may have option years stipulated in the original contract.

8.3 Describe what privacy training is provided to users either generally or specifically relevant to the program or system?

VA offers privacy and security training. Each program or system may offer training specific to the program or system that touches on information handling procedures and sensitivity of information. Please describe how individuals who have access to PII are trained to handle it appropriately. This question is related to privacy control AR-5, Privacy Awareness and Training.

Personnel that will be accessing information systems must read and acknowledge their receipt and acceptance of the VA National Rules of Behavior (ROB) or VA Contractor's ROB prior to gaining access to any VA information system or sensitive information. The rules are included as part of the VA Privacy and Security Awareness training which all personnel must complete via the VA’s Talent Management System (TMS). After the user’s initial acceptance of the Rules, the user must re-affirm their acceptance annually as part of the privacy and security awareness training. Acceptance is obtained via electronic acknowledgment and is tracked through the TMS system. The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information. System administrators are required to complete additional role-based training.

8.4 Has Authorization and Accreditation (A&A) been completed for the system?

If Yes, provide:

1. The Security Plan Status,
2. The Security Plan Status Date,
3. The Authorization Status,
4. The Authorization Date,
5. The Authorization Termination Date,
6. The Risk Review Completion Date,
7. The FIPS 199 classification of the system (LOW/MODERATE/HIGH).

Please note that all systems containing SPI are categorized at a minimum level of “moderate” under Federal Information Processing Standards Publication 199.

Authorization and Accreditation (A&A) has been completed for MuleSoft-e. The Security Plan is approved and dated 02/10/2020. A Security Plan dated 6-30-22 is pending final signature from OIT. The Authorization status is approved with an Authorization Date of 04/29/2020. The Authorization Termination Date is 04/29/2023. The Risk Review Completion Date is 06/30/2022. The FIPS 199 classification is MODERATE.

Section 9 – Technology Usage
The following questions are used to identify the technologies being used by the IT system or project.

9.1 Does the system use cloud technology? If so, what cloud model is being utilized?

If so, Does the system have a FedRAMP provisional or agency authorization? If the system does use cloud technology, but does not have FedRAMP authorization, explain how the Cloud Service Provider (CSP) solution was assessed and what FedRAMP documents and processes were used for the assessment in order to comply with VA Handbook 6517. Types of cloud models include: Software as a Service (SaaS), Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Commercial off the Shelf (COTS).

This question is related to privacy control UL-1, Information Sharing with Third Parties.

Note: For systems utilizing the VA Enterprise Cloud (VAEC), no further responses are required after 9.1.

MuleSoft is hosted in the MuleSoft-f FedRAMP environment and is authorized. MuleSoft-f (FedRAMP) was granted a full ATO on 03/07/2020 that is valid through 03/06/2023. The FIPS 199 classification if Moderate

9.2 Does the contract with the Cloud Service Provider, Contractors and VA customers establish who has ownership rights over data including PII? (Provide contract number and supporting information about PII/PHI from the contract)

Data is owned by the VA and is processed through MuleSoft based on VA guidelines. MuleSoft has the responsibility of notifying VA of actual or reasonably suspected unauthorized disclosure of VA Data by MuleSoft or those acting on its behalf. The contract number is VA118-16-D-1008. Information processed is in accordance with VA policies.

9.3 Will the CSP collect any ancillary data and if so, who has ownership over the ancillary data?
Per NIST 800-144, cloud providers hold significant details about the accounts of cloud consumers that could be compromised and used in subsequent attacks. Ancillary data also involves information the cloud provider collects or produces about customer-related activity in the cloud. It includes data collected to meter and charge for consumption of resources, logs and audit trails, and other such metadata that is generated and accumulated within the cloud environment.

This question is related to privacy control DI-1, Data Quality.

No the CSP will not collect ancillary data

9.4 NIST 800-144 states, “Organizations are ultimately accountable for the security and privacy of data held by a cloud provider on their behalf.” Is this principle described in contracts with customers? Why or why not?

What are the roles and responsibilities involved between the organization and cloud provider, particularly with respect to managing risks and ensuring organizational requirements are met?

This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

Data is owned by the VA and is processed through MuleSoft based on VA guidelines. MuleSoft has the responsibility of notifying VA of actual or reasonably suspected unauthorized disclosure of VA Data by MuleSoft or those acting on its behalf. Information processed is in accordance with VA policies. The ultimate accountability for the security and privacy held by the cloud provider on VA’s behalf is described in the contract # VA1 18-16-D-1008. Department of Veterans Affairs is the owner of all data to include PII. The magnitude of potential harm to the VA privacy release data is low to moderate due to the potential of identity theft or unauthorized release of PII. An unauthorized disclosure could negatively affect the reputation of the VA and Mulesoft as well as a reduction of public trust.

9.5 If the system is utilizing Robotics Process Automation (RPA), please describe the role of the bots.

Robotic Process Automation is the use of software scripts to perform tasks as an automated process that executes in parallel with or in place of human input. For example, will the automation move or touch PII/PHI information. RPA may also be referred to as “Bots” or Artificial Intelligence (AI).

MuleSoft-e does not use Robotics Process Automation (RPA).
