Abstract

The abstract provides the simplest explanation for “what does the system do?” and will be published online to accompany the PIA link.

Mail Automation (MAS): This solution is to automate and digitize intake, review, and processing of Veterans Benefits Administration (VBA) mail.

Veteran’s mail is fed into the VBA Automation Platform (VBAAP) for processing. We ingest the mail data and content and automate the follow-up actions. This involves validating the data for accuracy and taking specific actions in the VBA’s systems, which may include updating data in VBMS, uploading documents from the mail portal to VBMS and other VBA systems. No other analyzing tools are used.

Pension Automation and Optimization Initiative (POI): Certain documents are received as part of the mail automation process. These documents are parsed to extract relevant information, which is then analyzed by an AI based classifier to understand if the request is for pension. If the request is determined to be for pension benefits, then the data is sent to the P&F pension automation system for automation of the pension process.

Additional Presumptive Capacity Automation Services (APCAS) Claim Automation: This solution automates and digitizes the intake, review, and processing of Veteran’s disability benefits claims and associated evidence. Certain documents from the Veterans Benefits Management System (VBMS) eFolder are reviewed using optical character recognition for medical evidence and service locations and a summary of this review is provided to the adjudicator for review and decision making.

Overview

The overview is the most important section of the PIA. A thorough and clear overview gives the reader the appropriate context to understand the responses in the PIA. The overview should contain the following elements:

1. General Description
   A. The IT system name and the name of the program office that owns the IT system.

   The name of the system is VBA Automation Platform (VBAAP). VBAAP is a managed service and the program office that owns the IT system is the Office of Business Integration (OBI).

   B. The business purpose of the program, IT system, or technology and how it relates to the program office and agency mission.

   The VBAAP system provides Automation services listed below:
   1. Mail Automation Services (MAS): This system provides mail automation services for unattended automation of the triage and handling of packets after document conversion. Approximately 2.5 to 3 million unique Veterans and beneficiaries who are seeking VBA benefits such as disability compensation, pension, education, and other benefits provide their information to VBA each year. This information is processed by the VBA Automation Platform so that it can be updated in Veterans
Benefits Management System (VBMS) which is used to process benefits claims and perform related activities. Mail automation services (MAS) encompass the automation of mail handling and the interpretation and advanced analysis of Veteran/claimant communications or data (e.g., mail packet or document contents, etc.) via the application of robotic process automation and artificial intelligence (AI) including natural language processing (NLP).

2. Pension Automation and Optimization Initiative (POI): The Pension Automation Initiative (POI) will convert an existing manual business process into a managed automated solution that interfaces with VA systems for the processing of P&FS Claims. The core steps of the end to end to process include extracting and de-duplicating data, applying business rules and automating the award and notification activities.

3. Additional Presumptive Conditions Automation Services (APCAS): This solution automates and digitizes the intake, review, and processing of Veteran’s disability benefits claims. VBMS eFolder documents are reviewed using optical character recognition (OCR), AI and NLP for medical evidence and service locations and a summary of this review is provided to the adjudicator for review and decision making.

C. **Indicate the ownership or control of the IT system or project.**

International Business Machines (IBM) owns the IT system. The Office of Business Integration (OBI) manages the IT system and directs project requirements.

2. **Information Collection and Sharing**

D. **The expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual.**

The platform does not store information. The information is stored in the VBMS eFolder. The VBA is the typical client and the Veteran is the affected individual.

E. **A general description of the information in the IT system and the purpose for collecting this information.**

The IT system ingests scanned documents for Veteran’s disability benefits claims. The purpose for collecting this information is to automate processes related to claims establishment and adjudication which results in faster claims processing.

F. **Any information sharing conducted by the IT system. A general description of the modules and subsystems, where relevant, and their functions.**

A general description of the 3 modules of the VBAAP system are: Mail Automation Services (MAS) – This system provides mail automation services for unattended automation of the triage and handling of scanned mail packets. Approximately 2.5 to 3 million unique Veterans and beneficiaries who are seeking VBA benefits such as disability compensation, pension, education, and other benefits provide their information to VBA each year via paper mail. This information is processed by the VBA Automation Platform and uploaded to the Veterans Benefits Management System (VBMS) which is used to process benefits claims and perform related activities. Mail automation services (MAS) encompass the automation of mail handling and the interpretation and advanced analysis of Veteran/claimant communications or data (e.g., mail packet or document contents, etc.) via the application of robotic process automation (RPA), optical character recognition (OCR), natural
language processing (NLP) and artificial intelligence (AI). Pension Automation and Optimization Initiative (POI) – The Pension Automation Initiative (POI) will convert an existing manual business process into a managed automated solution that interfaces with VA systems for the processing of pension claims. The core steps of the end to end process include extracting and de-duplicating data, applying business rules and automating the award and notification activities. Additional Presumptive Conditions Automation Services (APCAS) Claim Automation: – This solution automates and digitizes the intake, review, and processing of claims documents for Veteran’s disability compensation benefits claims. Key components of the IBM IAP solution providing VBAAP services are: 1. AWS GovCloud 2. Robotic Process Automation 3. Intelligent OCR 4. AI / NLP Technologies.

G. Whether the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites.

The system is hosted in the AWS GovCloud. The use of this system including PII, is safeguarded using FedRAMP High compliant controls.

3. Legal Authority and SORN

H. A citation of the legal authority to operate the IT system.

This system has been identified as a Very High/High Risk system. Per VA Handbook 6500, all systems with a risk level of High or Very High that require continued operation after one year must obtain written approval from the AO that the security risk is acceptable due to mission criticality. Our ATO is valid until March 2, 2024. We are operating with the SORN 58VA21/22/28 - Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records – VA.

I. If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval? If the system is using cloud technology, does the SORN for the system cover cloud usage or storage?

The VBA Automation Platform is not a system of records. VBMS is the system of record for Veteran’s claim related documents. There is a SORN applied to our platform for this reason. It is: 58VA21/22/28 - Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records – VA. The SORN will not require amendment or revision for this change.

D. System Changes

J. Whether the completion of this PIA will result in circumstances that require changes to business processes

This will not require any changes to business processes.

K. Whether the completion of this PIA could potentially result in technology changes

This will not require any technology changes.
Section 1. Characterization of the Information

The following questions are intended to define the scope of the information requested and collected as well as the reasons for its collection as part of the program, IT system, or technology being developed.

1.1 What information is collected, used, disseminated, created, or maintained in the system?

Identify and list all Sensitive Personal Information (SPI) that is collected and stored in the system, including Individually Identifiable Information (III), Individually Identifiable Health Information (IIHI), Protected Health Information (PHI), and Privacy-Protected Information. For additional information on these information types and definitions, please see VA Directives and Handbooks in the 6500 series (https://va.gov/vapubs/). If the system creates information (for example, a score, analysis, or report), list the information the system is responsible for creating.

If a requesting system receives information from another system, such as a response to a background check, describe what information is returned to the requesting system.

This question is related to privacy control AP-1, Authority To Collect, and AP-2, Purpose Specification.

The information selected below must match the information provided in question 2.1 as well as the data elements columns in 4.1 and 5.1.

Please check any information listed below that your system collects, uses, disseminates, creates, or maintains. If additional SPI is collected, used, disseminated, created, or maintained, please list those in the text box below:

- Name
- Social Security Number
- Date of Birth
- Mother’s Maiden Name
- Personal Mailing Address
- Personal Phone Number(s)
- Personal Fax Number
- Personal Email Address
- Emergency Contact Information (Name, Phone Number, etc. of a different individual)
- Financial Information
- Health Insurance Beneficiary Numbers
- Account numbers
- Certificate/License numbers*
- Vehicle License Plate Number
- Internet Protocol (IP) Address Numbers
- Medications
- Medical Records
- Race/Ethnicity
- Tax Identification Number
- Medical Record Number
- Gender
- Integrated Control Number (ICN)
- Military History/Service Connection
- Next of Kin
- Other Data Elements (list below)
- Date of Death
- Dependent Information
- Marital Information
- Income/Expense Information
*Specify type of Certificate or License Number (e.g. Occupational, Education, Medical): Driver’s license, medical license numbers and any other license number(s) submitted on a document by a Veteran.

**PII Mapping of Components (Servers/Database)**

VBA Automation Platform (VBAAP) consists of 7 key components (servers/databases). Each component has been analyzed to determine if any elements of that component collect PII. The type of PII collected by VBA Automation Platform (VBAAP) and the reasons for the collection of the PII are in the table below.

*Note:* Due to the PIA being a public facing document, please do not include the server names in the table. The first table of 3.9 in the PTA should be used to answer this question.

**Internal Database Connections**

<table>

1.2 What are the sources of the information in the system?

*These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.*

1.2a List the individual, entity, or entities providing the specific information identified above. For example, is the information collected directly from the individual as part of an application for a benefit, or is it collected from other sources such as commercial data aggregators?

Information is collected from the VA Centralized Mail Portal, Veteran’s Benefits Management System (VBMS), VBMAS-A, VBMS-R, Corporate Data warehouse, Caseflow, CAPRI, Lighthouse,
HDR, SCIP, SSA, IRS and the VA Master Person Index (MPI) for verification of the data received on the intake forms and to automate the processing of claims.

1.2b Describe why information from sources other than the individual is required. For example, if a program’s system is using data from a commercial aggregator of information or data taken from public Web sites, state the fact that this is where the information is coming from and then in question indicate why the system is using this source of data.

Information is collected from sources such as the VA Centralized Mail Portal, Veteran’s Benefits Management System (VBMS), VBMAS-A, VBMS-R, Corporate Data warehouse, Caseflow, Compensation and Pension Record Interchange (CAPRI), Lighthouse APIs, Health Data Repository (HDR), Standards and COTS Integration Platform (SCIP), Social Security Administration (SSA), Internal Revenue Service (IRS) and the VA Master Person Index (MPI). All these sources are used for verification of the data received on the intake forms and to automate the processing of disability benefits claims.

1.2c If the system creates information (for example, a score, analysis, or report), list the system as a source of information.

The system creates an analysis report of the information gathered from the sources listed in 1.2b. This report is then uploaded to the system of records which is VBMS.

1.3 How is the information collected?
These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.3a This question is directed at the means of collection from the sources listed in question 1.2. Information may be collected directly from an individual, received via electronic transmission from another system, or created by the system itself. Specifically, is information collected through technologies or other technologies used in the storage or transmission of information in identifiable form?

Information is collected directly from the Veteran received via mail or fax. We also collect information electronically via RPA, APIs, OCR, NLP and AI.

1.3b If the information is collected on a form and is subject to the Paperwork Reduction Act, give the form’s OMB control number and the agency form number.

N/A

1.4 How will the information be checked for accuracy? How often will it be checked?
These questions are related to privacy controls DI-1, Data Quality, and DI-2, Data Integrity and Integrity Board.
1.4a Discuss whether and how often information stored in the system is checked for accuracy. Is information in the system checked against any other source of information (within or outside your organization) before the information is used to make decisions about an individual? For example, is there a computer matching agreement in place with another government agency? For systems that receive data from internal data sources or VA IT systems, describe the system checks to ensure that data corruption has not occurred during transmission.

The information will be checked using AI, OCR, and Intelligent Character Recognition (ICR). The confidence level of extraction from each method is evaluated and the results with the highest level of confidence are used. Veteran data is validated against VA source systems. If the identifying information does not match, then the data is not processed any further. AI models are used to classify some data elements, which cannot be accurately extracted with high level of confidence by the OCR/ICR process. Data which cannot be accurately extracted and validated by the above methods are off ramped for humans to process. Data received from VA IT sources and internal sources is not used unless a successful response in the exact format we expect is received.

1.4b If the system checks for accuracy by accessing a commercial aggregator of information, describe this process and the levels of accuracy required by the contract.

We do not use commercial aggregators.

1.5 What specific legal authorities, arrangements, and agreements defined the collection of information?

List the full legal authority for operating the system, specifically the authority to collect the information listed in question 1.1. Provide the authorities in a manner understandable to any potential reader, i.e., do not simply provide a legal citation; use statute names or regulations in addition to citations. Legal authorities include Federal laws, regulations, statutes, and Executive Orders. This question is related to privacy control AP-1, Authority to Collect

The authority for the United States Department of Veterans Affairs (VA) to collect and share data for the purpose outlined under the project scope include:

Privacy Act of 1974, 5 U.S.C. § 552a, as amended
VA Claims Confidentiality Statute, 38 U.S.C § 5701

Additionally, a fully executed ISA-MOU governs the interconnections between the VA and IBM the IBM Automation system (VBAAP) via the FIPS140-2 cryptographic module.

1.6 PRIVACY IMPACT ASSESSMENT: Characterization of the information

Consider the specific data elements collected and discuss the potential privacy risks and what steps, if any are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete this section)
Consider the following Fair Information Practice Principles (FIPPs) when assessing the risk to individual privacy:

**Principle of Purpose Specification:** Explain how the collection ties with the purpose of the underlying mission of the organization and its enabling authority.

**Principle of Minimization:** Is the information directly relevant and necessary to accomplish the specific purposes of the program?

**Principle of Individual Participation:** Does the program, to the extent possible and practical, collect information directly from the individual?

**Principle of Data Quality and Integrity:** Are there policies and procedures for VA to ensure that personally identifiable information is accurate, complete, and current?

This question is related to privacy control AR-1, Governance and Privacy Program, and AR-2, Privacy Impact and Risk Assessment.

Follow the format below when entering your risk assessment:

**Privacy Risk:** Sensitive Individual Information (SII), Personal Health Information (PHI), and Personally Identifiable Information (PII) data is stored in the system that could be compromised if appropriate safeguards are not in place.

**Mitigation:** The IBM IAP environment serving VBA Automation Platform is hosted on AWS GovCloud which is a FedRAMP High Private Cloud environment with most stringent data security and privacy safeguards in place as part of maintaining their FedRAMP High certification.

Additionally, the VBAAP system adheres to FISMA-Moderate Security & Compliance ATO requirements using VA handbook 6500 and NIST SP 800-53r4 controls, protecting confidentiality, integrity and availability of the data and the system.

**Section 2. Uses of the Information**

The following questions are intended to clearly delineate the use of information and the accuracy of the data being used.

**2.1 Describe how the information in the system will be used in support of the program’s business purpose.**

Identify and list each use (both internal and external to VA) of the information collected or maintained. This question is related to privacy control AP-2, Purpose Specification.

Please reference section 1.1 of this document on page 5 of 27 as this information has already been provided. The information is used to automate processes related to Veteran’s disability claims.
2.2 What types of tools are used to analyze data and what type of data may be produced?

These questions are related to privacy controls DI-1, Data Quality, DI-2, Data Integrity and Integrity Board, and SE-1, Inventory of Personally Identifiable Information.

2.2a Many systems sift through large amounts of information in response to a user inquiry or programmed functions. Systems may help identify areas that were previously not obvious and need additional research by agents, analysts, or other employees. Some systems perform complex analytical tasks resulting in, among other types of data, matching, relational analysis, scoring, reporting, or pattern analysis. Describe any type of analysis the system conducts and the data that is created from the analysis.

The system uses AI, OCR, ICR, NLP and RPA to generate an analysis of requirement defined relevant documents in the VBMS eFolder. The system checks against a list of provided keywords and provides a summary of every instance the keyword is found on the specified documents. The system is trained to recognize VA forms and Department of Defense (DoD) forms to perform intelligent data extraction. The system generates this analysis for a VBA claims adjudicator to assist them with processing disability benefits claims.

2.2b If the system creates or makes available new or previously unutilized information about an individual, explain what will be done with the newly derived information. Will it be placed in the individual's existing record? Will a new record be created? Will any action be taken against or for the individual identified because of the newly derived data? If a new record is created, will the newly created information be accessible to Government employees who make determinations about the individual? If so, explain fully under which circumstances and by whom that information will be used.

The system does not create information. The system does make new previously unutilized information available to the end user by uploading the Veteran’s submitted mail to the VBMS eFolder. The system analysis explained in 2.2a is uploaded to the Veteran’s VBMS eFolder. This information is used to assist in making decisions on disability benefits claims. This information is accessible to government employees and is used for disability claims adjudication by VBA end users. The circumstances in which it will be used include any time a claim for disability benefits is active. The information is used by all personnel related to disability benefits claims processing.

2.3 How is the information in the system secured?

These questions are related to security and privacy controls SC-9, Transmission Confidentiality, and SC-28, Protection of Information at Rest.

2.3a What measures are in place to protect data in transit and at rest?

The measures that are in place to protect data in transit and data at rest include - FIPS 140-2 cryptographic encryption on storage and backups, TLS 1.2 or better on all webservers and strict access controls/ACLs.

2.3b If the system is collecting, processing, or retaining Social Security Numbers, are there additional protections in place to protect SSNs?
Additional safeguards are in place to protect SSNs and minimize the exposure and misuse by implementing strict role-based access controls, multi-factor authentication and layered security including VPN, private subnets, firewalls, bastion hosts and encryption at all possible levels.

2.3c How is PII/PHI safeguarded in accordance with OMB Memorandum M-06-15?

In accordance with OMB Memorandum M-06-15 the PII/PHI data in the environment is safeguarded using multi-layer-security and defense-in-depth approach that include program level adherence to FISMA/FedRAMP controls and security best practices such as role-based access controls, multi-factor authentications, VPN, private subnets, firewalls, bastion hosts and encryption at all possible levels.

2.4 PRIVACY IMPACT ASSESSMENT: Use of the information.

Describe any types of controls that may be in place to ensure that information is handled in accordance with the uses described above. Example: Describe if training for users of the project covers how to appropriately use information. Describe the disciplinary programs or system controls (i.e. denial of access) that are in place if an individual is inappropriately using the information.

Consider the following FIPPs below to assist in providing a response:

Principle of Transparency: Is the PIA and SORN, if applicable, clear about the uses of the information?

Principle of Use Limitation: Is the use of information contained in the system relevant to the mission of the project?
This question is related to privacy control AR-4, Privacy Monitoring and Auditing, AR-5, Privacy Awareness and Training, and SE-2, Privacy Incident response.

2.4a How is access to the PII determined?

All roles/users/administrators of the VBA Automation Platform system are vetted through the eQIP clearance process and are required to use VA PIV smart cards to access the VA environment. User roles, responsibilities and entitlements are strictly monitored, tracked, and managed by the system owners and managers. The VBA Automation Platform collects and uses minimum required PII and uses the VA handbook 6500 based FISMA Moderate Risk Management Framework to safeguard the system and the data that is being handled as part of the VBA Automation Platform solution. This is in adherence to the requirements depicted in the contract PWS.

2.4b Are criteria, procedures, controls, and responsibilities regarding access documented?

Yes

2.4c Does access require manager approval?
2.4d Is access to the PII being monitored, tracked, or recorded?

Yes

2.4e Who is responsible for assuring safeguards for the PII?

The VBA Automation Platform’s Program Director and the VA Information System Owner are ultimately responsible for assuring safeguards for the PII data in the environment. All supporting teams such as PMO, Security, DevSecOps are required to follow those safeguards at every possible step throughout the solution delivery cycles.

Section 3. Retention of Information

The following questions are intended to outline how long information will be retained after the initial collection.

3.1 What information is retained?

Identify and list all information collected from question 1.1 that is retained by the system. This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal

The VBA Automation Platform retains SPI or PII information only for the duration of processing. The data is archived post processing based on the archival policy. Some audit data for the information system will be retained. Clinical data for presumptive conditions will be retained in a separate NoSQL database for evaluation of future presumptive conditions.

3.2 How long is information retained?

In some cases, VA may choose to retain files in active status and archive them after a certain period of time. State active file retention periods, as well as archived records, in number of years, for the information and record types. For example, financial data held within your system may have a different retention period than medical records or education records held within your system, please be sure to list each of these retention periods. The VA records officer should be consulted early in the development process to ensure that appropriate retention and destruction schedules are implemented. If the system is using cloud technology, will it be following the NARA approved retention length and schedule? This question is related to privacy control DM-2, Data Retention and Disposal.

No PII or SPI will be retained in the VBA Automation Platform. All information is retained in the VBMS eFolder.
3.3 Has the retention schedule been approved by the VA records office and the National Archives and Records Administration (NARA)?

An approved records schedule must be obtained for any IT system that allows the retrieval of a record via a personal identifier. The VA Records Officer will assist in providing a proposed schedule. The schedule must be formally offered to NARA for official approval. Once NARA approves the proposed schedule, the VA records officer will notify the system owner. This question is related to privacy control DM-2, Data Retention and Disposal.

3.3a Are all records stored within the system of record indicated on an approved disposition authority?

This is not applicable. While the VBA Automation Platform processes Veteran’s mail, and analyses existing data for disability benefits claims processing, it does not generate or store records per the definition of a record by the VA records office and NARA. All information is stored in the VBMS eFolder owned by VBA.

3.3b Please indicate each records retention schedule, series, and disposition authority.

This is not applicable. The VBA Automation Platform processes packets from the mail portal into VBMS which is the system of record for disability benefit claims information. The VBA Automation Platform does not retain any records outside the VBMS system of records. The VBA Automation platform will adhere to General Records Schedule 3.2 (GRS 10, 20, 30) in order to ensure the security of information technology systems and data is maintained and the proper response to any computer security incidents occurs as needed. https://www.archives.gov/files/records-mgmt/grs/grs03-2.pdf

3.4 What are the procedures for the elimination or transfer of SPI?

Explain how records are destroyed, eliminated or transferred to NARA at the end of their mandatory retention period. Please give the details of the process. For example, are paper records shredded on site, or by a shredding company and accompanied by a certificate of destruction, etc.? This question is related to privacy control DM-2, Data Retention and Disposal.

Since all data is stored in the AWS GovCloud storage solution, IBM IAP/VBAAP environment will depend on AWS GovCloud for data handling, retention, and disposal requirements as per the FedRAMP and NIST SP 800-88 compliance guidelines. In general, the VBAAP system will adhere to VA Handbook 6500 and FISMA Moderate controls for all data processing activities. All locally/temporarily stored data during data-processing activities by VBAAP, will be purged according to the customer specified timelines by using an automated script which will programmatically delete old data from the tables.

3.5 Does the system, where feasible, use techniques to minimize the risk to privacy by using PII for research, testing, or training?

Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. These uses of PII increase the risks associated with the unauthorized disclosure or misuse of the information. Please explain what
controls have been implemented to protect PII used for testing, training and research. This question is related to privacy control DM-3, Minimization of PII Used in Testing, Training and Research.

Access to all the VBA Automation Platform environments and visibility to PII data is strictly controlled and available only to the VBAAP staff that holds PIV/HSPD-12 clearance and has a need-to-know based on their role in the environment.

VBA Automation Platform uses data strictly as per the contract/PWS and does not share the PII data with any other entities and does not use PII data for any training purposes.

3.6 PRIVACY IMPACT ASSESSMENT: Retention of information

Discuss the risks associated with the length of time data is retained and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

While we understand that establishing retention periods for records is a formal process, there are policy considerations behind how long a project keeps information. The longer a project retains information, the longer it needs to secure the information and assure its accuracy and integrity. The proposed schedule should match the requirements of the Privacy Act to keep the minimum amount of PII for the minimum amount of time, while meeting the Federal Records Act. The schedule should align with the stated purpose and mission of the system.

Consider the following FIPPs below to assist in providing a response:

Principle of Minimization: Does the project retain only the information necessary for its purpose? Is the PII retained only for as long as necessary and relevant to fulfill the specified purposes?

Principle of Data Quality and Integrity: Has the PIA described policies and procedures for how PII that is no longer relevant and necessary is purged?

This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

Follow the format below:

Privacy Risk: The VBA Automation Platform processes Veterans’ incoming mail and eFolder documents which may contain PII and other sensitive data fields which could result in an unintentional release of this information.

Mitigation: All data is stored in the AWS GovCloud. The VBA Automation Platform coordinates with and inherits the AWS GovCloud security and privacy controls for data handling, retention, and disposal requirements as per the FedRAMP and NIST SP 800-88 compliance guidelines. No PII or SPI will be locally stored in the VBA Automation Platform.
Section 4. Internal Sharing/Receiving/Transmitting and Disclosure

The following questions are intended to define the scope of information sharing/receiving/transmitting within VA.

4.1 With which internal organizations is information shared/received/transmitted? What information is shared/received/transmitted, and for what purpose? How is the information transmitted?

NOTE: Question 3.9 (second table) on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any program offices, contractor-supported IT systems, and any other organization or IT system within VA with which information is shared.

State the purpose for the internal sharing. If you have specific authority to share the information, provide a citation to the authority.

For each interface with a system outside your program office, state what specific data elements (PII/PHI) are shared with the specific program office, contractor-supported IT system, and any other organization or IT system within VA.

Describe how the information is transmitted. For example, is the information transmitted electronically, by paper, or by some other means? Is the information shared in bulk, on a case-by-case basis, or does the sharing partner have direct access to the information?

This question is related to privacy controls AP-2, Purpose Specification, AR-3, Privacy Requirements for Contractors and Service Providers, AR-8, Accounting of Disclosures, TR-1, Privacy Notice, and UL-1, Internal Use.

Data Shared with Internal Organizations

4.2 PRIVACY IMPACT ASSESSMENT: Internal sharing and disclosure

Discuss the privacy risks associated with the sharing of information within the Department and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

This question is related to privacy control UL-1, Internal Use.

Follow the format below:

**Privacy Risk:** The data that is shared with other VA internal organizations, such as VBMS and DMHS may contain PII and other sensitive which could result in an unintentional release of this information.

**Mitigation:** The VA organizations such as VBMS, DMHS, PF&S who will be receiving the automated mail packets data, veterans’ benefits claim data, and/or pension optimization data from the VBA Automation Platform (VBAAP) do have their own agency ATOs or Security and
Privacy controls in place that govern their use of this system and data in accordance with VA Handbook 6500 RMF and NIST publications.

Section 5. External Sharing/Receiving and Disclosure

The following questions are intended to define the content, scope, and authority for information sharing external to VA, which includes Federal, State, and local governments, and the private sector.

5.1 With which external organizations (outside VA) is information shared/received? What information is shared/received, and for what purpose? How is the information transmitted and what measures are taken to ensure it is secure?

Is the sharing of information outside the agency compatible with the original collection? If so, is it covered by an appropriate routine use in a SORN? If not, please describe under what legal mechanism the IT system is allowed to share the information in identifiable form or personally identifiable information outside of VA.

NOTE: Question 3.10 on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any Federal, State, or local government agency or private sector organization with which information is shared.

For each interface with a system outside VA, state what specific data elements (PII/PHI) are shared with each specific partner.

What legal mechanisms, authoritative agreements, documentation, or policies are in place detailing the extent of the sharing and the duties of each party? For example, is the sharing of data compatible with your SORN? Then list the SORN and the applicable routine use from the SORN. Is there a Memorandum of Understanding (MOU), Computer Matching Agreement (CMA), or law that mandates the sharing of this information?

Describe how the information is transmitted to entities external to VA and what security measures have been taken to protect it during transmission. This question is related to privacy control UL-2, Information Sharing with Third Parties

Data Shared with External Organizations

<table>
<thead>
<tr>
<th>List External Program Office or IT System information is shared/received with</th>
<th>List the purpose of information being shared/received/transmitted with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program or IT system</th>
<th>List the legal authority, binding agreement, SORN routine use, etc. that permit external sharing (can be)</th>
<th>List the method of transmission and the measures in place to secure data</th>
</tr>
</thead>
</table>
IBM IAP/VBAAP does not share Veteran’s PII/PHI with any other Federal, State, or local government agency or private sector organization outside VA.

5.2 PRIVACY IMPACT ASSESSMENT: External sharing and disclosure
Discuss the privacy risks associated with the sharing of information outside the Department and what steps, if any, are currently being taken to mitigate those identified risks.

Discuss whether access controls have been implemented and whether audit logs are regularly reviewed to ensure appropriate sharing outside of the Department. For example, is there a Memorandum Of Understanding (MOU), contract, or agreement in place with outside agencies or foreign governments.

Discuss how the sharing of information outside of the Department is compatible with the stated purpose and use of the original collection.

This question is related to privacy control AR-2, Privacy Impact and Risk Assessment, AR-3, Privacy Requirements for Contractors and Service Providers, and AR-4, Privacy Monitoring and Auditing

Follow the format below:

**Privacy Risk:** None

**Mitigation:** None

### Section 6. Notice

The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information.

6.1 Was notice provided to the individual before collection of the information? If yes, please provide a copy of the notice as an Appendix-A 6.1 on the last page of the document. Also provide notice given to individuals by the source system (A notice may include a posted privacy policy, a Privacy Act notice on forms, or a SORN published in the Federal Register.) If notice was not provided, why not?

These questions are related to privacy control TR-1, Privacy Notice, and TR-2, System of Records Notices and Privacy Act Statements, and TR-3, Dissemination of Privacy Program Information.

6.1a This question is directed at the notice provided before collection of the information. This refers to whether the person is aware that his or her information is going to be collected. A notice may include a posted privacy policy, a Privacy Act statement on forms, or a SORN published in the Federal Register, Notice of Privacy Practice provided to individuals for VHA systems. If notice was provided in the Federal Register, provide the citation.
The IBM IAP/VBAAP does not collect information directly from individuals. We collect information from other VA systems and this requirement is noted in their PIAs. We have inherited the SORN from the system of record which is 58VA21/22/28 - Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records – VA.

6.1b If notice was not provided, explain why. If it was provided, attach a copy of the current notice.

The IBM IAP/VBAAP system is not collecting information directly from individuals but from other VA systems and those system owners would need to provide the copy of the current notice(s) they send in their PIAs.

6.1c Describe how the notice provided for the collection of information is adequate to inform those affected by the system that their information has been collected and is being used appropriately. Provide information on any notice provided on forms or on Web sites associated with the collection.

The IBM IAP/VBAAP system is not collecting information directly from individuals but from other VA systems. IBM IAP does not interface with the end users directly and has no role in informing veterans or stakeholders.

6.2 Do individuals have the opportunity and right to decline to provide information? If so, is a penalty or denial of service attached?

This question is directed at whether the person from or about whom information is collected can decline to provide the information and if so, whether a penalty or denial of service is attached. This question is related to privacy control IP-1, Consent, IP-2, Individual Access, and IP-3, Redress.

The IBM IAP/VBAAP system does not collect information directly from individuals.

6.3 Do individuals have the right to consent to particular uses of the information? If so, how does the individual exercise the right?

This question is directed at whether an individual may provide consent for specific uses or the consent is given to cover all uses (current or potential) of his or her information. If specific consent is required, how would the individual consent to each use? This question is related to privacy control IP-1, Consent.

The IBM IAP/VBAAP system is not collecting information directly from individuals but from other VA systems. IBM IAP has no role in consent forms process.

6.4 PRIVACY IMPACT ASSESSMENT: Notice

Describe the potential risks associated with potentially insufficient notice and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

Principle of Transparency: Has sufficient notice been provided to the individual?
**Principle of Use Limitation:** Is the information used only for the purpose for which notice was provided either directly to the individual or through a public notice? What procedures are in place to ensure that information is used only for the purpose articulated in the notice? This question is related to privacy control TR-1, Privacy Notice, AR-2, Privacy Impact and Risk Assessment, and UL-1, Internal Use.

Follow the format below:

**Privacy Risk:** When Veterans file claims they are notified about how their information will be used. If the incoming mail and benefits data is compromised this could result in an unintentional release of this information. The Veterans may be unaware of how their mail and other benefits data is handled and what their privacy rights are.

**Mitigation:** IBM IAP/VBA Automation Platform does not collect any veteran data. All veteran mail and other benefits data is provided to IBM IAP Platform by VA and is governed by the contract between VA and IBM. IBM is VA’s Managed Services provider contractor.

**Section 7. Access, Redress, and Correction**

The following questions are directed at an individual’s ability to ensure the accuracy of the information collected about him or her.

7.1 What are the procedures that allow individuals to gain access to their information?

These questions are related to privacy control IP-2, Individual Access, and AR-8, Accounting of Disclosures.

7.1a Cite any procedures or regulations your program has in place that allow access to information. These procedures, at a minimum, should include the agency’s FOIA/Privacy Act practices, but may also include additional access provisions. For example, if your program has a customer satisfaction unit, that information, along with phone and email contact information, should be listed in this section in addition to the agency’s procedures. See 5 CFR 294 and the VA FOIA Web page at http://www.foia.va.gov/ to obtain information about FOIA points of contact and information about agency FOIA processes.

IBM IAP/VBAAP is not an end user facing system.

7.1b If the system is exempt from the access provisions of the Privacy Act, please explain the basis for the exemption or cite the source where this explanation may be found, for example, a Final Rule published in the Code of Federal Regulations (CFR).

N/A. This system only processes information and updates the appropriate VBA systems of record.

7.1c If the system is not a Privacy Act system, please explain what procedures and regulations are in place that covers an individual gaining access to his or her information.

N/A – This is not a system of record, or collection of information from Veterans, the system only processes information and updates the appropriate VBA systems of record. The Automation Platform is not collecting information directly from individuals.

Version Date: October 1, 2022

Page 24 of 34
7.2 What are the procedures for correcting inaccurate or erroneous information?

Describe the procedures and provide contact information for the appropriate person to whom such issues should be addressed. If the correction procedures are the same as those given in question 7.1, state as much. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

N/A – The Automation Platform is not collecting information directly from individuals but from other VA systems and those systems would cover the veterans’ access/redress/correction related issues.

7.3 How are individuals notified of the procedures for correcting their information?

How are individuals made aware of the procedures for correcting his or her information? This may be through notice at collection or other similar means. This question is meant to address the risk that even if procedures exist to correct information, if an individual is not made fully aware of the existence of those procedures, then the benefits of the procedures are significantly weakened. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

N/A – The Automation Platform is not collecting information directly from individuals but from other VA systems and those systems would cover the veterans’ access/redress/correction related issues. IBM IAP/VBAAP system has no role or authority to interact with individual veterans/users.

7.4 If no formal redress is provided, what alternatives are available to the individual?

Redress is the process by which an individual gains access to his or her records and seeks corrections or amendments to those records. Redress may be provided through the Privacy Act and Freedom of Information Act (FOIA), and also by other processes specific to a program, system, or group of systems. **Example: Some projects allow users to directly access and correct/update their information online. This helps ensures data accuracy.**

This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

N/A – The Automation Platform is not collecting information directly from individuals but from other VA systems and those systems would cover the veterans’ access/redress/correction related issues. IBM IAP/VBAAP system has no role or authority to interact with individual veterans/users.

7.5 PRIVACY IMPACT ASSESSMENT: Access, redress, and correction

Discuss what risks there currently are related to the Department’s access, redress, and correction policies and procedures for this system and what, if any, steps have been taken to mitigate those risks. **For example, if a project does not allow individual access, the risk of inaccurate data needs to be discussed in light of the purpose of the project. For example, providing access to ongoing law enforcement activities could negatively impact the program’s effectiveness because the individuals involved might change their behavior.** (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:
Principle of Individual Participation: Is the individual provided with the ability to find out whether a project maintains a record relating to him?

Principle of Individual Participation: If access and/or correction is denied, then is the individual provided notice as to why the denial was made and how to challenge such a denial?

Principle of Individual Participation: Is there a mechanism by which an individual is able to prevent information about him obtained for one purpose from being used for other purposes without his knowledge? This question is related to privacy control IP-3, Redress.

Follow the format below:

Privacy Risk: N/A

Mitigation: N/A

Section 8. Technical Access and Security

The following questions are intended to describe technical safeguards and security measures.

8.1 What procedures are in place to determine which users may access the system, and are they documented? These questions are related to privacy control AR-7, Privacy-Enhanced System Design and Development.

8.1a Describe the process by which an individual receives access to the system.

Only the IBM IAP team and the VBA employees assigned to this project are given access to the VBA Automation Platform systems and data after these users are fully vetted through the eQIP clearance process. The VA COR, managers/system owners assign, track and monitor every user account, their roles and responsibilities and user life cycle. For every role, Separation of Duties (SoD) and Least Privilege rules are applied to ensure that access to PII is restricted only to those who have a business need to use it. Roles are limited since there aren’t traditional users of the system.

8.1b Identify users from other agencies who may have access to the system and under what roles these individuals have access to the system. Who establishes the criteria for what PII can be shared?

No users from other agencies have access to IBM IAP/VBAAP environment or systems and solution.

8.1c Describe the different roles in general terms that have been created to provide access to the system. For example, certain users may have "read-only" access while others may be permitted to make certain amendments or changes to the information.
The VA COR, managers/system owners assign, track, and monitor every user account, their roles and responsibilities and user life cycle. All user accounts are VBAAP system users and are not traditional end users. For every role, Separation of Duties (SoD) and Least Privilege rules are applied in order to ensure that access to PII is restricted only to those who have a business need to use it. No regular user accounts are created on this system since this system provides only the robotic processing automation (no human intervention) for the Benefits and other processes and workflows.

8.2 Will VA contractors have access to the system and the PII? If yes, what involvement will contractors have with the design and maintenance of the system? Has a contractor confidentiality agreement, Business Associate Agreement (BAA), or a Non-Disclosure Agreement (NDA) been developed for contractors who work on the system?

If so, how frequently are contracts reviewed and by whom? Describe the necessity of the access provided to contractors to the system and whether clearance is required. If Privacy Roles and Responsibilities have been established to restrict certain users to different access levels, please describe the roles and associated access levels. Explain the need for VA contractors to have access to the PII. This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

IBM IAP, the managed services provider for VA’s VBA Automation Platform, ensures that there are NDAs/BAAs in place with any Third-Party contracting organizations that are part of the overall VBAP systems and solution. IBM IAP/VBAAP system is hosted on AWS GovCloud and that CSP account governs the vendor risk management processes. IBM and VA have a PWS and ISA-MOU in place.

8.3 Describe what privacy training is provided to users either generally or specifically relevant to the program or system?

VA offers privacy and security training. Each program or system may offer training specific to the program or system that touches on information handling procedures and sensitivity of information. Please describe how individuals who have access to PII are trained to handle it appropriately. This question is related to privacy control AR-5, Privacy Awareness and Training.

All users of the VBA Automation Platform are provided the VA Privacy Information Security (PISA) training and VA Information Security Rules of Behavior (RoB) prior to gaining access to any VA information system or sensitive information. Additional trainings role-based trainings may also get assigned based on role of a user. Annual recertification is required for all trainings.

8.4 Has Authorization and Accreditation (A&A) been completed for the system?

8.4a If Yes, provide:

1. The Security Plan Status: Operational
2. The System Security Plan Status Date: 09/2022
3. The Authorization Status: ATO Granted
4. The Authorization Date: 03/02/2023
5. The Authorization Termination Date: 03/02/2024
6. The Risk Review Completion Date: 09/2022
7. The FIPS 199 classification of the system (LOW/MODERATE/HIGH): MODERATE

Please note that all systems containing SPI are categorized at a minimum level of “moderate” under Federal Information Processing Standards Publication 199.

8.4b If No or In Process, provide your Initial Operating Capability (IOC) date.

N/A

Section 9 – Technology Usage
The following questions are used to identify the technologies being used by the IT system or project.

9.1 Does the system use cloud technology? If so, what cloud model is being utilized?

If so, Does the system have a FedRAMP provisional or agency authorization? If the system does use cloud technology, but does not have FedRAMP authorization, explain how the Cloud Service Provider (CSP) solution was assessed and what FedRAMP documents and processes were used for the assessment in order to comply with VA Handbook 6517. Types of cloud models include: Software as a Service (SaaS), Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Commercial off the Shelf (COTS), Desktop as a Service (DaaS), Mobile Backend as a Service (MBaaS), Information Technology Management as a Service (ITMaaS). This question is related to privacy control UL-1, Information Sharing with Third Parties.

Note: For systems utilizing the VA Enterprise Cloud (VAEC), no further responses are required after 9.1. (Refer to question 3.3.1 of the PTA)

Yes, the IBM IAP/VBAAP system uses Cloud technology and is hosted on AWS GovCloud. The AWS GovCloud Cloud services provider (CSP) has a FedRAMP agency authorization. And the VBAAP Managed Services has FISMA Moderate agency ATO that adheres to NIST and VA Handbook 6500 controls.

The AWS GovCloud is an IaaS model while the IBM IAP managed service is a PaaS and SaaS model.

9.2 Does the contract with the Cloud Service Provider, Contractors and VA customers establish who has ownership rights over data including PII? (Provide contract number and supporting information about PII/PHI from the contract). (Refer to question 3.3.2 of the PTA) This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.
9.3 Will the CSP collect any ancillary data and if so, who has ownership over the ancillary data?

_Per NIST 800-144, cloud providers hold significant details about the accounts of cloud consumers that could be compromised and used in subsequent attacks. Ancillary data also involves information the cloud provider collects or produces about customer-related activity in the cloud. It includes data collected to meter and charge for consumption of resources, logs and audit trails, and other such metadata that is generated and accumulated within the cloud environment._

_This question is related to privacy control DI-1, Data Quality._

Yes. AWS GovCloud, as a CSP has access and ownership to ancillary data.

9.4 NIST 800-144 states, “Organizations are ultimately accountable for the security and privacy of data held by a cloud provider on their behalf.” Is this principle described in contracts with customers? Why or why not?

_What are the roles and responsibilities involved between the organization and cloud provider, particularly with respect to managing risks and ensuring organizational requirements are met? This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers._

AWS is a CSP. AWS would be able to provide more details about the CSP responsibility matrix, data collected and controls information. The CSP contract/account abides with FedRAMP High security, privacy, compliance and accountability requirements as a condition to maintain their FedRAMP High certification. As a business owner of the data that is hosted in this environment, VA has the ultimate responsibility and accountability towards safeguarding veterans’ data.

9.5 If the system is utilizing Robotics Process Automation (RPA), please describe the role of the bots.

_Robotic Process Automation is the use of software scripts to perform tasks as an automated process that executes in parallel with or in place of human input. For example, will the automation move or touch PII/PHI information. RPA may also be referred to as “Bots” or Artificial Intelligence (AI)._ 

Yes, the IBM IAP/VBAAP is utilizing Robotic Process Automation (RPA) tools to automate VBA processes by integrating with VA systems.
