Abstract
Veterans Claim Intake Program Conversion Services Assessing (VCIP-CS) converts benefits application source materials to searchable pdf format. The system generates the images, indices and extracted metadata from the source materials and uploads same to VBA via VBMS to achieve deliver, a term that refers to the upload of data to the upload service and confirmation that the transaction was successful. It also has the Source Materials Tracking System (SMTS) which aids the tracking of materials from storage (origin) to process facilities, through the conversion and return to long term storage. Additionally, the Centralized Benefits Communication Management (CBCM), also a component of VCIP-CS allows Regional Offices to send mails to veterans through a centralized service. CBCM conducts document retrieval, batch communication receipt and document preparation/packaging services for outbound communications to veterans.

Overview

The overview is the most important section of the PIA. A thorough and clear overview gives the reader the appropriate context to understand the responses in the PIA. The overview should contain the following elements:

1 General Description
   A. The IT system name and the name of the program office that owns the IT system.
      Veterans Claim Intake Program Conversion Services Assessing (VCIP-CS) owned by GDIT and controlled by VBA OIT
   
      B. The business purpose of the program, IT system, or technology and how it relates to the program office and agency mission.
      Veterans Claim Intake Program Conversion Service Assessing (VCIP-CS) takes scanned images of Veterans benefits-related records and uploads them to the Veterans Benefits Management System. It also tracks the source material from receipt at the processing site through scanning, upload, and de-preparation for long-term storage. The system is hosted on AWS GovCloud. The system also has a component that manages printing and mailing of letters to Veterans. The users include VBA internal personnel as well as GDIT personnel with specific responsibilities and role based access
   
      C. Indicate the ownership or control of the IT system or project.
      Vendor owned (GDIT) and VA Controlled (VBA)

2. Information Collection and Sharing
   D. The expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual.
      About 2.5 million veterans
   
      E. A general description of the information in the IT system and the purpose for collecting this information.
The source materials could contain PII/PHI including Social Security Number, Date of birth, mailing address. These are not collected directly from veterans but are extracted from source materials.

F. Any information sharing conducted by the IT system. A general description of the modules and subsystems, where relevant, and their functions.

VCIP-CS component applications (FCS and CBCM) has a site-to-site connection with VBMS for the purpose of transmitting data to VBA though VBMS

G. Whether the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites.

The system components are hosted on AWS GovCloud instance. Users access the system from Regional Offices. The associated database is encrypted at rest and in transit. Users, (role-based) are also required to complete VA clearance prior to having access. The system are only accessed from facilities with approved PE controls in place.

3. Legal Authority and SORN
H. A citation of the legal authority to operate the IT system.

The issuance of the Performance Work Statement (PWS) and the GDIT contract with VA conveyed the legal authority to operate VCIP-CS. The legal authority is supported by;

Privacy Act of 1974, 5 U.SC. § 552a • Confidential Nature of Claims, 38 U.S.C § 5701
• HIPAA Privacy Rule, 45 C.F.R. Part 164
• Confidentiality of Certain Medical Records, 38 U.S.C. § 7332
• Confidentiality of healthcare Quality Assurance Review Records, 38 U.S.C. § 5705
• Freedom of Information Act, 5 U.S.C. § 552

SORN Information;

58VA21/22/28 86FR 61858 Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records-VA, 11/8/2021
https://www.govinfo.gov/content/pkg/FR-2021-11-08/pdf/2021-24372.pdf

I. If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval? If the system is using cloud technology, does the SORN for the system cover cloud usage or storage?
SORN changes not required

D. System Changes
J. Whether the completion of this PIA will result in circumstances that require changes to business processes
This update will not necessitate a process change

K. Whether the completion of this PIA could potentially result in technology changes
This update will not result in technology changes
Section 1. Characterization of the Information

The following questions are intended to define the scope of the information requested and collected as well as the reasons for its collection as part of the program, IT system, or technology being developed.

1.1 What information is collected, used, disseminated, created, or maintained in the system?

Identify and list all Sensitive Personal Information (SPI) that is collected and stored in the system, including Individually Identifiable Information (III), Individually Identifiable Health Information (IIHI), Protected Health Information (PHI), and Privacy-Protected Information. For additional information on these information types and definitions, please see VA Directives and Handbooks in the 6500 series (https://www.va.gov/vapubs/). If the system creates information (for example, a score, analysis, or report), list the information the system is responsible for creating.

If a requesting system receives information from another system, such as a response to a background check, describe what information is returned to the requesting system. This question is related to privacy control AP-1, Authority To Collect, and AP-2, Purpose Specification.

The information selected below must match the information provided in question 2.1 as well as the data elements columns in 4.1 and 5.1.

Please check any information listed below that your system collects, uses, disseminates, creates, or maintains. If additional SPI is collected, used, disseminated, created, or maintained, please list those in the text box below:

- Name
- Social Security Number
- Date of Birth
- Mother’s Maiden Name
- Personal Mailing Address
- Personal Phone Number(s)
- Personal Fax Number
- Personal Email Address
- Emergency Contact Information (Name, Phone Number, etc. of a different individual)
- Financial Information

- Health Insurance Beneficiary Numbers
- Account numbers
- Certificate/License numbers*
- Vehicle License Plate Number
- Internet Protocol (IP) Address Numbers
- Medications
- Medical Records
- Race/Ethnicity
- Tax Identification Number
- Integrated Control Number (ICN)
- Military History/Service Connection
- Next of Kin
- Other Data Elements (list below)

<<Add Additional Information Collected But Not Listed Above Here (For Example, A Personal Phone Number That Is Used As A Business Number)>>

*Specify type of Certificate or License Number (e.g. Occupational, Education, Medical)
PII Mapping of Components (Servers/Database)

Veterans Claim Intake Program Conversion Services Assessing consists of 2 key components (servers/databases). Each component has been analyzed to determine if any elements of that component collect PII. The type of PII collected by Veterans Claim Intake Program Conversion Services Assessing and the reasons for the collection of the PII are in the table below.

**Note:** Due to the PIA being a public facing document, please do not include the server names in the table. The first table of 3.9 in the PTA should be used to answer this question.

<table>
<thead>
<tr>
<th>Database Name of the information system collecting/storing PII</th>
<th>Does this system collect PII? (Yes/No)</th>
<th>Does this system store PII? (Yes/No)</th>
<th>Type of PII (SSN, DOB, etc.)</th>
<th>Reason for Collection/Storage of PII</th>
<th>Safeguards</th>
</tr>
</thead>
<tbody>
<tr>
<td>VCIP-CS-DB</td>
<td>Yes</td>
<td>Yes</td>
<td>SSN, DOB, Mailing address, Full names</td>
<td>Extracted from source material</td>
<td>DB is encrypted at rest, in transit and in process</td>
</tr>
<tr>
<td>CBCM</td>
<td>Yes</td>
<td>Yes</td>
<td>SSN, DOB, Mailing address, Full names</td>
<td>This is contained in the mails processed for veterans.</td>
<td>DB is encrypted at rest, in transit and in process</td>
</tr>
</tbody>
</table>

1.2 What are the sources of the information in the system?

*These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.*

1.2a List the individual, entity, or entities providing the specific information identified above. For example, is the information collected directly from the individual as part of an application for a benefit, or is it collected from other sources such as commercial data aggregators?

The source materials are shipped from VA storage locations to the processing sites. The information are extracted from scanned images and documents (source materials). The system does not directly collect PII/PHI from individuals.

1.2b Describe why information from sources other than the individual is required. For example, if a program’s system is using data from a commercial aggregator of information or data taken from public Web sites, state the fact that this is where the information is coming from and then in question indicate why the system is using this source of data.

The system function is to scan hard copy benefits application documents and store those images in searchable PDF, as well as extract metadata from the documents. This is to make the documents/data readily available for VBA benefits processing.
1.2c If the system creates information (for example, a score, analysis, or report), list the system as a source of information.

FCS, a component VCIP-CS can be listed as the source of information for the reports pulled from FCS.

1.3 How is the information collected?
These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.3a This question is directed at the means of collection from the sources listed in question 1.2. Information may be collected directly from an individual, received via electronic transmission from another system, or created by the system itself. Specifically, is information collected through technologies or other technologies used in the storage or transmission of information in identifiable form?

Information is generated from source materials. These are not collected directly from individuals.

1.3b If the information is collected on a form and is subject to the Paperwork Reduction Act, give the form’s OMB control number and the agency form number.

This is not applicable.

1.4 How will the information be checked for accuracy? How often will it be checked?
These questions are related to privacy controls DI-1, Data Quality, and DI-2, Data Integrity and Integrity Board.

1.4a Discuss whether and how often information stored in the system is checked for accuracy. Is information in the system checked against any other source of information (within or outside your organization) before the information is used to make decisions about an individual? For example, is there a computer matching agreement in place with another government agency? For systems that receive data from internal data sources or VA IT systems, describe the system checks to ensure that data corruption has not occurred during transmission.

The information in the scanned images cannot be changed. The extracted information from the source materials go through QA and is parsed by the system for accuracy.

1.4b If the system checks for accuracy by accessing a commercial aggregator of information, describe this process and the levels of accuracy required by the contract.

N/A
1.5 What specific legal authorities, arrangements, and agreements defined the collection of information?

List the full legal authority for operating the system, specifically the authority to collect the information listed in question 1.1. Provide the authorities in a manner understandable to any potential reader, i.e., do not simply provide a legal citation; use statute names or regulations in addition to citations. Legal authorities include Federal laws, regulations, statutes, and Executive Orders. This question is related to privacy control AP-1, Authority to Collect

The issuance of the Performance Work Statement (PWS) and the GDIT contract with VA conveyed the legal authority to operate VCIP-CS. The legal authority is supported by:
Privacy Act of 1974, 5 U.SC. § 552a • Confidential Nature of Claims, 38 U.S.C § 5701
• HIPAA Privacy Rule, 45 C.F.R. Part 164
• Confidentiality of Certain Medical Records, 38 U.S.C. § 7332
• Confidentiality of healthcare Quality Assurance Review Records, 38 U.S.C. § 5705

SORN Information;

1.6 PRIVACY IMPACT ASSESSMENT: Characterization of the information

Consider the specific data elements collected and discuss the potential privacy risks and what steps, if any are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete this section)

Consider the following Fair Information Practice Principles (FIPPs) when assessing the risk to individual privacy:

Principle of Purpose Specification: Explain how the collection ties with the purpose of the underlying mission of the organization and its enabling authority.

Principle of Minimization: Is the information directly relevant and necessary to accomplish the specific purposes of the program?

Principle of Individual Participation: Does the program, to the extent possible and practical, collect information directly from the individual?

Principle of Data Quality and Integrity: Are there policies and procedures for VA to ensure that personally identifiable information is accurate, complete, and current?
This question is related to privacy control AR-1, Governance and Privacy Program, and AR-2, Privacy Impact and Risk Assessment.
Follow the format below when entering your risk assessment:

**Privacy Risk:**

The major existent privacy risk with the information and data associated with the program/system is data loss and inadvertent disclosure

**Mitigation:**

PHI and PII are contained in the sourced material, FCS does not use PHI or PII as metadata. FCS limits the access to source materials and converted data by automating the conversion process, using FIPS 140-3 compliant encryption for data at rest and data in transit. FIPS 140-3 protocols are used to transmit data as outlined in the system description. All FCS personnel require a minimum NACI background investigation. Based on role and level of access a SAC may be required. Personnel security requirements for SAC are outlined in the MOU with VBA.

**Section 2. Uses of the Information**

The following questions are intended to clearly delineate the use of information and the accuracy of the data being used.

2.1 Describe how the information in the system will be used in support of the program’s business purpose.

*Identify and list each use (both internal and external to VA) of the information collected or maintained. This question is related to privacy control AP-2, Purpose Specification.*

Please provide response here

- Full name: Full names is used for the purpose of identifying a veteran
- SSN: This is used to identify and associate a veteran to their record.
- DOB: This is used to identify veteran’s age.
- Gender: Use to identify the gender of the veteran.
- Full Address: This is used for the purpose of sending mails to the veteran

2.2 What types of tools are used to analyze data and what type of data may be produced?

*These questions are related to privacy controls DI-1, Data Quality, DI-2, Data Integrity and Integrity Board, and SE-1, Inventory of Personally Identifiable Information.*

FCS as well as CBCM (both components of VCIP-CS) have capability to generate reports and performance analysis. Reports analysis and presentation are done using Tableau plugin.
2.2a Many systems sift through large amounts of information in response to a user inquiry or programmed functions. Systems may help identify areas that were previously not obvious and need additional research by agents, analysts, or other employees. Some systems perform complex analytical tasks resulting in, among other types of data, matching, relational analysis, scoring, reporting, or pattern analysis. Describe any type of analysis the system conducts and the data that is created from the analysis.

The system mostly aggregates the number of scanned images or source materials processed and keeps track of the processing timeline.

2.2b If the system creates or makes available new or previously unutilized information about an individual, explain what will be done with the newly derived information. Will it be placed in the individual’s existing record? Will a new record be created? Will any action be taken against or for the individual identified because of the newly derived data? If a new record is created, will the newly created information be accessible to Government employees who make determinations about the individual? If so, explain fully under which circumstances and by whom that information will be used.

The system does not create or add any new information about an individual. However, for the purpose of searching and identifying individual records, the system creates a unique RMN (Records Management Number) for individuals. This number is used to search and identify an individual’s record.

2.3 How is the information in the system secured?
These questions are related to security and privacy controls SC-9, Transmission Confidentiality, and SC-28, Protection of Information at Rest.

2.3a What measures are in place to protect data in transit and at rest?

FCS limits the access to source materials and converted data by automating the conversion process, using FIPS 140-3 compliant encryption for data at rest and data in transit. FIPS 140-3 protocols are used to transmit data as outlined in the system description. All FCS personnel require a minimum National Agency Check and Inquiry (NACI) background investigation. Based on role and level of access a Special Agreement Check (SAC) may be required. Personnel security requirements for SAC are outlined in the MOU with VBA.

2.3b If the system is collecting, processing, or retaining Social Security Numbers, are there additional protections in place to protect SSNs?

While FCS/CBCM do not directly collect SSN and other PII/PHI, there are measures in place to protect these sensitive information extracted from source materials. The data is encrypted at rest and in transit. Also, physical access to the processing area as well as source materials is strictly restricted to ONLY VA-cleared personnel (SAC) with approved business and functional need.

2.3c How is PII/PHI safeguarded in accordance with OMB Memorandum M-06-15?
While FCS/CBCM do not directly collect SSN and other PII/PHI, there are measures in place to protect these sensitive information extracted from source materials. The data is encrypted at rest and in transit. Also, physical access to the processing area as well as source materials is strictly restricted to ONLY VA-cleared personnel (SAC) with approved business and functional need. This information is not shared with any entity other than VBA through VBMS.

2.4 PRIVACY IMPACT ASSESSMENT: Use of the information.

Describe any types of controls that may be in place to ensure that information is handled in accordance with the uses described above. Example: Describe if training for users of the project covers how to appropriately use information. Describe the disciplinary programs or system controls (i.e. denial of access) that are in place if an individual is inappropriately using the information.

Consider the following FIPPs below to assist in providing a response:

Principle of Transparency: Is the PIA and SORN, if applicable, clear about the uses of the information?

Principle of Use Limitation: Is the use of information contained in the system relevant to the mission of the project?
This question is related to privacy control AR-4, Privacy Monitoring and Auditing, AR-5, Privacy Awareness and Training, and SE-2, Privacy Incident response.

2.4a How is access to the PII determined?

Access to PII is determined based on Role/function. Role-Based Access Control (RBAC) is strictly implemented to ensure only persons with business need to know have access. Prior to provisioning access, personnel must complete requisite Information Security training and User Acceptable Policy. They must also complete SAC level clearance prior to getting access to work with PII.

2.4b Are criteria, procedures, controls, and responsibilities regarding access documented?

Yes. There is record of all personnel on the project and the record identifies those who have completed the requirements for having access to sensitive information. There is also a continuous monitoring process to ensure the conditions for granting access is maintained.

2.4c Does access require manager approval?

Every access request goes through Manager review and approval.

2.4d Is access to the PII being monitored, tracked, or recorded?

This is in place and strictly monitored
2.4e Who is responsible for assuring safeguards for the PII?

There is a Program Information Security Officer who works with project management team at the facilities to ensure the safeguards put in place for PII remain efficient. The Program ISO reports to the VA system ISSO.

Section 3. Retention of Information

The following questions are intended to outline how long information will be retained after the initial collection.

3.1 What information is retained?

*Identify and list all information collected from question 1.1 that is retained by the system.*

*This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal*

The system extract and retains the following information for period determined by VBA

- Full Names
- Date of Birth
- Personal Mailing Address
- Gender

3.2 How long is information retained?

*In some cases VA may choose to retain files in active status and archive them after a certain period of time. State active file retention periods, as well as archived records, in number of years, for the information and record types. For example, financial data held within your system may have a different retention period than medical records or education records held within your system, please be sure to list each of these retention periods.*

*The VA records officer should be consulted early in the development process to ensure that appropriate retention and destruction schedules are implemented. If the system is using cloud technology, will it be following the NARA approved retention length and schedule? This question is related to privacy control DM-2, Data Retention and Disposal.*

FCS retains source materials, images, and image metadata for a period determined by VBA (60 days for source materials) following confirmation of successful upload to VBMS. After successful upload, the images are archived in encrypted DB for the length of the project. FCS shall store source materials onsite where document conversion occurred in conditions and security consistent to source material awaiting scanning. At the conclusion of processing, FCS shall ship source materials to VA’s Records Management Services vendor for storage awaiting disposition.

3.3 Has the retention schedule been approved by the VA records office and the National Archives and Records Administration (NARA)?
An approved records schedule must be obtained for any IT system that allows the retrieval of a record via a personal identifier. The VA records officer will assist in providing a proposed schedule. The schedule must be formally offered to NARA for official approval. Once NARA approves the proposed schedule, the VA records officer will notify the system owner. Please work with the system Privacy Officer and VA Records Officer to answer these questions. This question is related to privacy control DM-2, Data Retention and Disposal.

3.3a Are all records stored within the system of record indicated on an approved disposition authority?

Yes

3.3b Please indicate each records retention schedule, series, and disposition authority.

The retention period and disposition is determined and effected by VBA. Per the program Performance Work Statement (PWS), data is retained in encrypted DB for the life of the contract.

3.4 What are the procedures for the elimination or transfer of SPI?

Explain how records are destroyed, eliminated or transferred to NARA at the end of their mandatory retention period. Please give the details of the process. For example, are paper records shredded on site, or by a shredding company and accompanied by a certificate of destruction, etc.? This question is related to privacy control DM-2, Data Retention and Disposal.

FCS limits the use for SPI to the converted documents as outlined in the specifications in the PWS and the MOU with VBA. The system does not directly use SPI for processing the scanned images or documents. Files are mapped to unique Records Management Number (RMN) generated for the records. The RMN is also used for locating a record, eliminating the need to pull records with SSN or other PII. The system and associated database reside on Amazon AWS GovCloud. Records are transmitted to VBA through VBMS and the server decommissioned when no longer required.

3.5 Does the system, where feasible, use techniques to minimize the risk to privacy by using PII for research, testing, or training?

Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. These uses of PII increase the risks associated with the unauthorized disclosure or misuse of the information. Please explain what controls have been implemented to protect PII used for testing, training and research. This question is related to privacy control DM-3, Minimization of PII Used in Testing, Training and Research.

FCS does not use PII/PHI nor SPI for research, testing and training purposes. The environment, designed to have a production and preproduction environments uses dummy data for testing and training purposes. This is intended to preserve the privacy and reduce potential risks associated with the unauthorized disclosure of the information.
3.6 PRIVACY IMPACT ASSESSMENT: Retention of information

Discuss the risks associated with the length of time data is retained and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

While we understand that establishing retention periods for records is a formal process, there are policy considerations behind how long a project keeps information. The longer a project retains information, the longer it needs to secure the information and assure its accuracy and integrity. The proposed schedule should match the requirements of the Privacy Act to keep the minimum amount of PII for the minimum amount of time, while meeting the Federal Records Act. The schedule should align with the stated purpose and mission of the system.

Consider the following FIPPs below to assist in providing a response:

**Principle of Minimization:** Does the project retain only the information necessary for its purpose? Is the PII retained only for as long as necessary and relevant to fulfill the specified purposes?

**Principle of Data Quality and Integrity:** Has the PIA described policies and procedures for how PII that is no longer relevant and necessary is purged? This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

Follow the format below:

**Privacy Risk:** Unauthorized or inadvertent disclosure of information

**Mitigation:** Scanned images are stored in a database and encrypted both at rest, in transit and in process. The SPI management is in line with the PWS specifications as well as approved VA guidelines and the ISA MOU with VBMS. All personnel are trained on Sensitive information management procedure as well as complete related VA TMS training and User Acceptance Policy acknowledgement.

Section 4. Internal Sharing/Receiving/Transmitting and Disclosure

The following questions are intended to define the scope of information sharing/receiving/transmitting within VA.

4.1 With which internal organizations is information shared/received/transmitted? What information is shared/received/transmitted, and for what purpose? How is the information transmitted? 

**NOTE:** Question 3.9 (second table) on Privacy Threshold Analysis should be used to answer this question.
Identify and list the names of any program offices, contractor-supported IT systems, and any other organization or IT system within VA with which information is shared.

State the purpose for the internal sharing. If you have specific authority to share the information, provide a citation to the authority.

For each interface with a system outside your program office, state what specific data elements (PII/PHI) are shared with the specific program office, contractor-supported IT system, and any other organization or IT system within VA.

Describe how the information is transmitted. For example, is the information transmitted electronically, by paper, or by some other means? Is the information shared in bulk, on a case-by-case basis, or does the sharing partner have direct access to the information? This question is related to privacy controls AP-2, Purpose Specification, AR-3, Privacy Requirements for Contractors and Service Providers, AR-8, Accounting of Disclosures, TR-1, Privacy Notice, and UL-1, Internal Use.

Data Shared with Internal Organizations

<table>
<thead>
<tr>
<th>List the Program Office or IT System information is shared/received with</th>
<th>List the purpose of the information being shared/received with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program Office or IT system</th>
<th>Describe the method of transmittal</th>
</tr>
</thead>
</table>
| VBA through VBMS | VA owns the data the system generates. VBA retains the digitized data/images in VBMS. The purpose is for the data/information to be used in making benefits applications decisions. | - Date of Birth  
- Full names  
- Personal mailing address  
- SSN | FIPS 140-3 compliant protocols, HTTPS and SFTP over VA MPLS network |
| DAS | A part of VBA, data aids in making benefits applications processing decisions faster. | Operational data, analysis reports and record that may include  
- Date of Birth  
- Full names  
- Personal mailing address  
- SSN | FIPS 140-3 compliant protocols, They aSFTP. |

4.2 PRIVACY IMPACT ASSESSMENT: Internal sharing and disclosure

Discuss the privacy risks associated with the sharing of information within the Department and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System IS ISO to complete all Privacy Risk questions inside the document this section).

This question is related to privacy control UL-1, Internal Use.
Follow the format below:

**Privacy Risk:** Unauthorized or inadvertent disclosure of information

**Mitigation:**
Scanned images are stored in a database and encrypted both at rest, in transit and in process using FIPS 140-3 compliant standard. Access to system is restricted to only approved FIPS 140-3 devices. Authentication method is also set up to use PIV cards for PIV-issued personnel and MFA for non-PIV users. The SPI management is in line with the PWS specifications as well as approved VA guidelines and the ISA MOU with VBMS. All personnel are trained on Sensitive information management procedure as well as complete related VA TMS training and User Acceptance Policy acknowledgement.

Section 5. External Sharing/Receiving and Disclosure

The following questions are intended to define the content, scope, and authority for information sharing external to VA, which includes Federal, State, and local governments, and the private sector.

5.1 With which external organizations (outside VA) is information shared/received? What information is shared/received, and for what purpose? How is the information transmitted and what measures are taken to ensure it is secure?

Is the sharing of information outside the agency compatible with the original collection? If so, is it covered by an appropriate routine use in a SORN? If not, please describe under what legal mechanism the IT system is allowed to share the information in identifiable form or personally identifiable information outside of VA.

NOTE: Question 3.10 on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any Federal, State, or local government agency or private sector organization with which information is shared.

For each interface with a system outside VA, state what specific data elements (PII/PHI) are shared with each specific partner.

What legal mechanisms, authoritative agreements, documentation, or policies are in place detailing the extent of the sharing and the duties of each party? For example, is the sharing of data compatible with your SORN? Then list the SORN and the applicable routine use from the SORN. Is there a Memorandum of Understanding (MOU), Computer Matching Agreement (CMA), or law that mandates the sharing of this information?

Describe how the information is transmitted to entities external to VA and what security measures have been taken to protect it during transmission.

This question is related to privacy control UL-2, Information Sharing with Third Parties.
### Data Shared with External Organizations

<table>
<thead>
<tr>
<th>List External Program Office or IT System information is shared/received with</th>
<th>List the purpose of information being shared / received / transmitted with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program or IT system</th>
<th>List the legal authority, binding agreement, SORN routine use, etc. that permit external sharing (can be more than one)</th>
<th>List the method of transmission and the measures in place to secure data</th>
</tr>
</thead>
<tbody>
<tr>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

#### 5.2 PRIVACY IMPACT ASSESSMENT: External sharing and disclosure

Discuss the privacy risks associated with the sharing of information outside the Department and what steps, if any, are currently being taken to mitigate those identified risks.

Discuss whether access controls have been implemented and whether audit logs are regularly reviewed to ensure appropriate sharing outside of the Department. For example, is there a Memorandum Of Understanding (MOU), contract, or agreement in place with outside agencies or foreign governments.

Discuss how the sharing of information outside of the Department is compatible with the stated purpose and use of the original collection.

This question is related to privacy control AR-2, Privacy Impact and Risk Assessment, AR-3, Privacy Requirements for Contractors and Service Providers, and AR-4, Privacy Monitoring and Auditing

Follow the format below:

**Privacy Risk:** N/A, FCS and CBCM does not share data with external organizations as referenced below in the mitigation

**Mitigation:**

Data is not shared with external third parties. Access to the FCS and CBCM portals for users require PIV authentication or MFA means on a provisioned account. MOU with VBA outline requirements of internal users that have access to source materials.

#### Section 6. Notice

The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information.
6.1 Was notice provided to the individual before collection of the information? If yes, please provide a copy of the notice as an Appendix-A 6.1 on the last page of the document. Also provide notice given to individuals by the source system (A notice may include a posted privacy policy, a Privacy Act notice on forms, or a system of records notice published in the Federal Register.) If notice was not provided, why not?

These questions are related to privacy control TR-1, Privacy Notice, and TR-2, System of Records Notices and Privacy Act Statements, and TR-3, Dissemination of Privacy Program Information.

6.1a This question is directed at the notice provided before collection of the information. This refers to whether the person is aware that his or her information is going to be collected. A notice may include a posted privacy policy, a Privacy Act statement on forms, or a SORN published in the Federal Register, Notice of Privacy Practice provided to individuals for VHA systems. If notice was provided in the Federal Register, provide the citation.

FCS and CBCM does not directly collect personal or personal health information nor SPI from individuals. However, as mentioned earlier, benefits application documents, which are the source materials being converted, extracted and transmitted to VBA through VBMS may contain PII and/or PHI. The requisite notice is provided by VBA which is responsible for collecting the information from individuals. The project PWS empowers the system to receive the source materials from the VA or the storage facilities.

6.1b If notice was not provided, explain why. If it was provided, attach a copy of the current notice.

Please provide response here

6.1c Describe how the notice provided for the collection of information is adequate to inform those affected by the system that their information has been collected and is being used appropriately. Provide information on any notice provided on forms or on Web sites associated with the collection.

FCS and CBCM does not directly collect personal or personal health information nor SPI from individuals. However, as mentioned earlier, benefits application documents, which are the source materials being converted, extracted and transmitted to VBA through VBMS may contain PII and/or PHI. The requisite notice is provided by VBA which is responsible for collecting the information from individuals. The project PWS empowers the system to receive the source materials from the VA or the storage facilities.

6.2 Do individuals have the opportunity and right to decline to provide information? If so, is a penalty or denial of service attached?

This question is directed at whether the person from or about whom information is collected can decline to provide the information and if so, whether a penalty or denial of service is attached. This question is related to privacy control IP-1, Consent, IP-2, Individual Access, and IP-3, Redress.

FCS and CBCM does not directly receive nor collect SPI from individuals. They are sent to VBA directly. The discretion to either provide or decline to provide PII/PHI is resides between the veteran and VBA.
6.3 Do individuals have the right to consent to particular uses of the information? If so, how does the individual exercise the right?

This question is directed at whether an individual may provide consent for specific uses or the consent is given to cover all uses (current or potential) of his or her information. If specific consent is required, how would the individual consent to each use? This question is related to privacy control IP-1, Consent.

The component systems function is limited to document conversion and image data transfer, benefits related mail handling and tracking of source materials. There is no direct interaction or exchange with individuals or public. The right to consent to any use of information is determined by VA (VBA) and retains the responsibility to notify the individuals or information owners.

6.4 PRIVACY IMPACT ASSESSMENT: Notice

Describe the potential risks associated with potentially insufficient notice and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Has sufficient notice been provided to the individual?

**Principle of Use Limitation:** Is the information used only for the purpose for which notice was provided either directly to the individual or through a public notice? What procedures are in place to ensure that information is used only for the purpose articulated in the notice?

This question is related to privacy control TR-1, Privacy Notice, AR-2, Privacy Impact and Risk Assessment, and UL-1, Internal Use.

Follow the format below:

**Privacy Risk:**
Possible unauthorized access, use or inadvertent disclosure of personal information

**Mitigation:**
The system does not directly collect personal information from veterans. The system only scans, converts and extracts information from source materials as well as receive, batch and print and send benefits related mails to veterans. The source materials however might contain personal information. The responsibility for notice issuance lies with VBA. The system does not make use of, nor share individuals’ information for any purpose. A unique Records Management Number (RMN) is generated by the system and assigned to individual records for the purpose of records searching.

Section 7. Access, Redress, and Correction

The following questions are directed at an individual’s ability to ensure the accuracy of the information collected about him or her.
7.1 What are the procedures that allow individuals to gain access to their information?

These questions are related to privacy control IP-2, Individual Access, and AR-8, Accounting of Disclosures.

7.1a Cite any procedures or regulations your program has in place that allow access to information. These procedures, at a minimum, should include the agency’s FOIA/Privacy Act practices, but may also include additional access provisions. For example, if your program has a customer satisfaction unit, that information, along with phone and email contact information, should be listed in this section in addition to the agency’s procedures. See 5 CFR 294 and the VA FOIA Web page at http://www.foia.va.gov/ to obtain information about FOIA points of contact and information about agency FOIA processes.

FCS and CBCM, both components of VCIP-CS system are not public facing application or system. Access is role based, for business need purposes only. Individuals’ access to their information will be directly channeled to VBA systems.

7.1b If the system is exempt from the access provisions of the Privacy Act, please explain the basis for the exemption or cite the source where this explanation may be found, for example, a Final Rule published in the Code of Federal Regulations (CFR).

Individuals seeking access to their information contained in the system will route the request directly to VBA.

7.1c If the system is not a Privacy Act system, please explain what procedures and regulations are in place that covers an individual gaining access to his or her information.

Individuals seeking access to their information contained in the system will route the request directly to VBA.

7.2 What are the procedures for correcting inaccurate or erroneous information?

Describe the procedures and provide contact information for the appropriate person to whom such issues should be addressed. If the correction procedures are the same as those given in question 7.1, state as much. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

FCS and CBCM does not collect veterans’ information, Source materials and Benefits mails often contain these information and are scanned or mailed as is/received. If there is need for individuals to correct their information, that request or process is managed by VBA.

7.3 How are individuals notified of the procedures for correcting their information?

How are individuals made aware of the procedures for correcting his or her information? This may be through notice at collection or other similar means. This question is meant to address the risk that even if procedures exist to correct information, if an individual is not made fully aware of the existence of those procedures, then the benefits of the procedures are significantly weakened.
This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

Since the VBA collects these information, there will also be a means of notifying individuals of any need make corrections in their information. This is outside the scope of the system.

7.4 If no formal redress is provided, what alternatives are available to the individual?

Redress is the process by which an individual gains access to his or her records and seeks corrections or amendments to those records. Redress may be provided through the Privacy Act and Freedom of Information Act (FOIA), and also by other processes specific to a program, system, or group of systems. Example: Some projects allow users to directly access and correct/update their information online. This helps ensures data accuracy.
This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

This is outside the scope of the system. VBA would have a means of letting individuals/veterans correct or update their information.

7.5 PRIVACY IMPACT ASSESSMENT: Access, redress, and correction

Discuss what risks there currently are related to the Department’s access, redress, and correction policies and procedures for this system and what, if any, steps have been taken to mitigate those risks. For example, if a project does not allow individual access, the risk of inaccurate data needs to be discussed in light of the purpose of the project. For example, providing access to ongoing law enforcement activities could negatively impact the program’s effectiveness because the individuals involved might change their behavior. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

Principle of Individual Participation: Is the individual provided with the ability to find out whether a project maintains a record relating to him?

Principle of Individual Participation: If access and/or correction is denied, then is the individual provided notice as to why the denial was made and how to challenge such a denial?

Principle of Individual Participation: Is there a mechanism by which an individual is able to prevent information about him obtained for one purpose from being used for other purposes without his knowledge?

This question is related to privacy control IP-3, Redress.

Follow the format below:

Privacy Risk: This is not applicable to the system, for the reasons stated in the mitigation statement below.

Mitigation:
This is not directly applicable to the system in review. The circumstances and need for correcting, updating, or removing any information is determined by VBA.

Version Date: October 1, 2022
Page 20 of 29
Section 8. Technical Access and Security

The following questions are intended to describe technical safeguards and security measures.

8.1 What procedures are in place to determine which users may access the system, and are they documented?

These questions are related to privacy control AR-7, Privacy-Enhanced System Design and Development.

8.1a Describe the process by which an individual receives access to the system.

Access to the FCS and CBCM is strictly role based on need to know. Access is granted to VA-cleared, with valid business or functional need to know. PIV issued personnel with role-based need access applications using PIV as means of authentication while non-PIV users access via MFA. In both cases, accounts are pre-provisioned on request and approval.

8.1b Identify users from other agencies who may have access to the system and under what roles these individuals have access to the system. Who establishes the criteria for what PII can be shared?

This is not applicable. Only VA users have access. The other users will be GDIT personnel cleared by VA to work on the program.

8.1c Describe the different roles in general terms that have been created to provide access to the system. For example, certain users may have "read-only" access while others may be permitted to make certain amendments or changes to the information.

The system has Admin users, Super User Account, Test accounts with access to complete testing, read-only account.

8.2 Will VA contractors have access to the system and the PII? If yes, what involvement will contractors have with the design and maintenance of the system? Has a contractor confidentiality agreement, Business Associate Agreement (BAA), or a Non-Disclosure Agreement (NDA) been developed for contractors who work on the system?

If so, how frequently are contracts reviewed and by whom? Describe the necessity of the access provided to contractors to the system and whether clearance is required. If Privacy Roles and Responsibilities have been established to restrict certain users to different access levels, please describe the roles and associated access levels. Explain the need for VA contractors to have access to the PII. This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

FCS and CBCM is developed, owned and managed by GDIT, a VA contractor as a SaaS offering thus, system is GDIT-owned and VA-Controlled. GDIT developers and admins including testers go through VA SAC clearance in order to be on the program. Other GDIT personnel on the project all have VA sponsored SAC clearance prior to getting access. There is a BAA, NDA and User acceptable policy in place.
8.3 Describe what privacy training is provided to users either generally or specifically relevant to the program or system?

VA offers privacy and security training. Each program or system may offer training specific to the program or system that touches on information handling procedures and sensitivity of information. Please describe how individuals who have access to PII are trained to handle it appropriately. This question is related to privacy control AR-5, Privacy Awareness and Training.

Users are required to complete the VA Privacy and Information Security Awareness and Rules of Behavior training on VA TMS platform. There is also a GDIT provided recurrent training for system users.

8.4 Has Authorization and Accreditation (A&A) been completed for the system?

8.4a If Yes, provide:

1. The Security Plan Status: Approved
2. The System Security Plan Status Date: 5/5/2022
3. The Authorization Status: Valid ATO
4. The Authorization Date: 6/16/2022
5. The Authorization Termination Date: 6/15/2025
6. The Risk Review Completion Date: 6/2/2022
7. The FIPS 199 classification of the system (LOW/MODERATE/HIGH): Moderate

Please note that all systems containing SPI are categorized at a minimum level of “moderate” under Federal Information Processing Standards Publication 199.

8.4b If No or In Process, provide your Initial Operating Capability (IOC) date.

Please provide response here

Section 9 – Technology Usage

The following questions are used to identify the technologies being used by the IT system or project.

9.1 Does the system use cloud technology? If so, what cloud model is being utilized?

If so, Does the system have a FedRAMP provisional or agency authorization? If the system does use cloud technology, but does not have FedRAMP authorization, explain how the Cloud Service Provider (CSP) solution was assessed and what FedRAMP documents and processes were used for the assessment in order to comply with VA Handbook 6517. Types of cloud models include: Software as a Service (SaaS), Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Commercial off the Shelf (COTS), Desktop as a Service (DaaS), Mobile Backend as a Service (MBaaS), Information Technology Management as a Service (ITMaaS). This question is related to privacy control UL-1, Information Sharing with Third Parties.
Note: For systems utilizing the VA Enterprise Cloud (VAEC), no further responses are required after 9.1. (Refer to question 3.3.1 of the PTA)

The system is cloud-based and it is a SaaS model.

9.2 Does the contract with the Cloud Service Provider, Contractors and VA customers establish who has ownership rights over data including PII? (Provide contract number and supporting information about PII/PHI from the contract). (Refer to question 3.3.2 of the PTA) This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

Per contract (VA 20-00081754) terms, VA has full ownership of all data relating to the system, both system and transactional data. The Cloud service provider is Amazon AWS GovCloud.

9.3 Will the CSP collect any ancillary data and if so, who has ownership over the ancillary data?

Per NIST 800-144, cloud providers hold significant details about the accounts of cloud consumers that could be compromised and used in subsequent attacks. Ancillary data also involves information the cloud provider collects or produces about customer-related activity in the cloud. It includes data collected to meter and charge for consumption of resources, logs and audit trails, and other such metadata that is generated and accumulated within the cloud environment.

This question is related to privacy control DI-1, Data Quality.

All data generated in the course of the system’s operations is owned by VA.

9.4 NIST 800-144 states, “Organizations are ultimately accountable for the security and privacy of data held by a cloud provider on their behalf.” Is this principle described in contracts with customers? Why or why not?

What are the roles and responsibilities involved between the organization and cloud provider, particularly with respect to managing risks and ensuring organizational requirements are met?
This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

VA works with GDIT to ensure requisite security controls are in place to secure, protect and preserve the privacy of information and data relating to the VCIP-CS system and components.

9.5 If the system is utilizing Robotics Process Automation (RPA), please describe the role of the bots.
Robotic Process Automation is the use of software scripts to perform tasks as an automated process that executes in parallel with or in place of human input. For example, will the automation move or touch PII/PHI information. RPA may also be referred to as “Bots” or Artificial Intelligence (AI).

Not applicable
