Abstract

The abstract provides the simplest explanation for “what does the system do?” and will be published online to accompany the PIA link.

Symantec Clearwell (SCW) is a COTS eDiscovery tool procured for the VA Office of General Counsel (OGC) to effectively preserve, collect, process, review, analyze, and produce Electronically Stored Information (ESI) in compliance with legal obligations under the Federal Rules of Civil Procedure (FRCP). SCW is also necessary for VA to perform its duties in response to Congressional inquiries and other information requests. SCW will be used in the VA by OGC or other legally responsible parties to objectively search emails and other ESI, based on case-specific parameters, and then make applicable ESI available as legal evidence. SCW resides on dedicated servers at the DCO AITC facility; will only be accessible to an extremely limited number of users; and does not have interconnections outside of VA networks. SCW eDiscovery software will not affect any existing VA program or application. Software access is required by OGC and necessary OIT personnel, in the VA Central Office and nationally - allowing attorneys, custodians of relevant information, chief information officers (CIO), information security officers (ISO), and other OIT personnel to accomplish the required eDiscovery tasks more efficiently and effectively. SCW eDiscovery software/platform is designed for litigation support, and primarily assists the preservation, processing (i.e., decryption and de-duplication), search, review, analysis, and production of ESI. Should VA's eDiscovery methods be challenged, SCW software is legally defensible, whereas manual discovery of ESI is not. Unless an eDiscovery tool is operational, VA is vulnerable to a number of penalties, including: Sanctions for spoliation (i.e., the destruction, material alteration, or failure to preserve relevant information); An adverse inference (i.e., allowing an interpretation of a document that is adverse to the Department); Monetary fines; Attorneys' fees; Litigation costs; Dismissals and judgments against the VA; Contempt of court or of Congress.

Overview

The overview is the most important section of the PIA. A thorough and clear overview gives the reader the appropriate context to understand the responses in the PIA. The overview should contain the following elements:

1 General Description
   A. The IT system name and the name of the program office that owns the IT system.
      e-Discovery Clearwell (SCW), VA Office of General Counsel (OGC)
   
   B. The business purpose of the program, IT system, or technology and how it relates to the program office and agency mission.
      Symantec Clearwell (SCW) is a COTS eDiscovery tool procured for the VA Office of General Counsel (OGC) to effectively preserve, collect, process, review, analyze, and produce Electronically Stored Information (ESI) in compliance with legal obligations under the Federal Rules of Civil Procedure (FRCP). SCW is also necessary for VA to perform its duties in response to Congressional inquiries and other information requests. SCW will be used in the VA by OGC or other legally responsible parties to objectively search emails and other ESI, based on case-specific parameters, and then make applicable ESI available as legal evidence.
   
   C. Indicate the ownership or control of the IT system or project.
      SCW is a COTS eDiscovery tool procured for the VA Office of General Counsel (OGC)
2. Information Collection and Sharing

D. The expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual.

SCW will be used by approximately 911 users in the VA by OGC or other legally responsible parties to objectively search emails and other ESI, based on case-specific parameters, and then make applicable ESI available as legal evidence.

E. A general description of the information in the IT system and the purpose for collecting this information.

The number of individuals with information in the system will be determined on case-by-case basis. Any relevant information involving pending or reasonably anticipated litigation stored in VA IT systems can become a part of the data stored in this system. Information in the VA IT systems may be in any form of digital media such as email, word processing, spreadsheets, databases, audio and images and may contain all forms of PII/PHI. It may be collected from VA exchange servers, file shares, voice mail, tablets, phones or any storage devices hosting digital data now or in the future. The system will produce reports generated by OGC staff as needed to support litigation.

F. Any information sharing conducted by the IT system. A general description of the modules and subsystems, where relevant, and their functions.

SCW resides on dedicated servers at the DCO AITC facility; will only be accessible to an extremely limited number of users; and does not have interconnections outside of VA networks. SCW eDiscovery software will not affect any existing VA program or application. Software access is required by OGC and necessary OIT personnel, in the VA Central Office and nationally - allowing attorneys, custodians of relevant information, chief information officers (CIO), information security officers (ISO), and other OIT personnel to accomplish the required eDiscovery tasks more efficiently and effectively. SCW eDiscovery software/platform is designed for litigation support, and primarily assists the preservation, processing (i.e., decryption and de-duplication), search, review, analysis, and production of ESI. Should VA's eDiscovery methods be challenged, SCW software is legally defensible, whereas manual discovery of ESI is not. Unless an eDiscovery tool is operational, VA is vulnerable to a number of penalties, including: Sanctions for spoliation (i.e., the destruction, material alteration, or failure to preserve relevant information); An adverse inference (i.e., allowing an interpretation of a document that is adverse to the Department); Monetary fines; Attorneys' fees; Litigation costs; Dismissals and judgments against the VA; Contempt of court or of Congress.

G. Whether the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites.

The system is stand-alone and will not share information with other IT systems; however, the system will contain information that is collected from other IT systems. Additionally, information collected, processed, reviewed and produced may be shared with the Department of Justice (DOJ) and any parties to a lawsuit, who, under federal law, have a right to the information.

3. Legal Authority and SORN

H. A citation of the legal authority to operate the IT system.

As described in section 1.4, the Federal Rules of Civil Procedure and other federal laws require the preservation and production of ESI. If VA fails to maintain ESI in pending or reasonably anticipated litigation it may be liable for spoliation of evidence and face court-imposed penalties, including a judgment and monetary damages against the VA. SORN 16VA026 states: 42 U.S.C. 2651 et seq.; 31...

I. If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval? If the system is using cloud technology, does the SORN for the system cover cloud usage or storage?

The completion of this PIA will not result in a change of business operations/processes, technology changes or amendment to the SORN.

D. System Changes
   J. Whether the completion of this PIA will result in circumstances that require changes to business processes
      N/A

K. Whether the completion of this PIA could potentially result in technology changes
   N/A

Section 1. Characterization of the Information

The following questions are intended to define the scope of the information requested and collected as well as the reasons for its collection as part of the program, IT system, or technology being developed.

1.1 What information is collected, used, disseminated, created, or maintained in the system?

Identify and list all Sensitive Personal Information (SPI) that is collected and stored in the system, including Individually Identifiable Information (III), Individually Identifiable Health Information (IIHI), Protected Health Information (PHI), and Privacy-Protected Information. For additional information on these information types and definitions, please see VA Directives and Handbooks in the 6500 series (https://www.va.gov/vapubs/). If the system creates information (for example, a score, analysis, or report), list the information the system is responsible for creating.

If a requesting system receives information from another system, such as a response to a background check, describe what information is returned to the requesting system. This question is related to privacy control AP-1, Authority To Collect, and AP-2, Purpose Specification.

The information selected below must match the information provided in question 2.1 as well as the data elements columns in 4.1 and 5.1.
Please check any information listed below that your system collects, uses, disseminates, creates, or maintains. If additional SPI is collected, used, disseminated, created, or maintained, please list those in the text box below:

- Name
- Social Security Number
- Date of Birth
- Mother’s Maiden Name
- Personal Mailing Address
- Personal Phone Number(s)
- Personal Fax Number
- Personal Email Address
- Emergency Contact Information (Name, Phone Number, etc. of a different individual)
- Financial Information
- Health Insurance Beneficiary Numbers
- Account numbers
- Certificate/License numbers*
- Vehicle License Plate Number
- Internet Protocol (IP) Address Numbers
- Medications
- Medical Records
- Race/Ethnicity
- Tax Identification Number
- Medical Record Number
- Gender
- Integrated Control Number (ICN)
- Military History/Service Connection
- Next of Kin
- Other Data Elements (list below)

The system will not automatically collect any of the above information. In most cases, email is collected and would not contain most of the above types of data, however, since a lawsuit can involve any allegation related to any of VA’s employees, veterans or its mission, duties and programs, it is possible that any type of ESI that VA maintains could be collected and stored in SCW.

Should it be in a collected document, the following information may be collected but not required:

- Name: Confirm Veteran’s identification
- Social Security Number: Confirm Veteran identity, create file number for Veteran
- Date of Birth: Confirm Veteran identity and benefits
- Mailing Address: Contact and correspondence with Veteran
- Zip Code: Part of mailing address
- Phone numbers: Contact Veteran
- Email Address: Contact Veteran
- Health Insurance Beneficiary – Person who receives the benefits in case of death
- Numbers Account numbers - Coincidentally collected when received in electronic documents but not required.
- Certificate/License numbers Vehicle License Plate Number - Confirms license numbers and vehicle plate
- Internet Protocol (IP) Address - Coincidentally collected when received in electronic documents but not required.
- Current Medications - Coincidentally collected when received in electronic documents but not required.
- Previous Medical Records - Coincidentally collected when received in electronic documents but not required.
- Race/Ethnicity - Coincidentally collected when received in electronic documents but not required.
PII Mapping of Components (Servers/Database)

eDiscovery Clearwell (SCW) consists of no key components (servers/databases). Each component has been analyzed to determine if any elements of that component collect PII. The type of PII collected by eDiscovery Clearwell (SCW) and the reasons for the collection of the PII are in the table below.

Note: Due to the PIA being a public facing document, please do not include the server names in the table. The first table of 3.9 in the PTA should be used to answer this question.

### Internal Database Connections

**1.2 What are the sources of the information in the system?**

These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

**1.2a List the individual, entity, or entities providing the specific information identified above. For example, is the information collected directly from the individual as part of an application for a benefit, or is it collected from other sources such as commercial data aggregators?**

A case originates when VA knows or should know that information in any VA record or IT system is relevant to pending or reasonably anticipated litigation. At that time, a duty arises pursuant to federal law to preserve all VA ESI that is relevant to the litigation or that may lead to the production of relevant information.

**1.2b Describe why information from sources other than the individual is required. For example, if a program’s system is using data from a commercial aggregator of information or data taken from public Web sites, state the fact that this is where the information is coming from and then in question indicate why the system is using this source of data.**

The system is designed so that VA personnel may electronically collect ESI from “custodians” (the VA employees that have the relevant information) and transfer it to SCW for processing, review and production in litigation.

**1.2c If the system creates information (for example, a score, analysis, or report), list the system as a source of information.**
Information in the SCW platform may be in any form of digital media such as email, word processing, spreadsheets, databases, audio and images and may contain all forms of SPI/III/IIHI/PHI. It may be collected from VA exchange servers, file shares, voice mail, tablets, phones or any storage devices hosting digital data now or in the future. The data pulled from the VA IT system and imported into the eDiscovery Clearwell system will be searched by OGC employees for information relevant to pending or reasonably anticipated litigation. Reports may be generated by OGC staff as needed to support litigation. Information on any individuals or any relevant

1.3 How is the information collected?

These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.3a This question is directed at the means of collection from the sources listed in question 1.2. Information may be collected directly from an individual, received via electronic transmission from another system, or created by the system itself. Specifically, is information collected through technologies or other technologies used in the storage or transmission of information in identifiable form?

Information will be collected by local VA Office of Information & Technology (OIT) staff pulling it from the native VA IT systems and delivered electronically to Enterprise Program Management Office (EPMO) to be imported in to SCW. For example, a custodian’s email account would be copied from the Exchange server by local OIT, and then sent encrypted to EPMO to be imported into SCW.

1.3b If the information is collected on a form and is subject to the Paperwork Reduction Act, give the form’s OMB control number and the agency form number.

All data is retrieved directly from VA devices to support litigation evidence. Individuals do receive notice or provide consent about data collected for litigation purposes.

1.4 How will the information be checked for accuracy? How often will it be checked?

These questions are related to privacy controls DI-1, Data Quality, and DI-2, Data Integrity and Integrity Board.

1.4a Discuss whether and how often information stored in the system is checked for accuracy. Is information in the system checked against any other source of information (within or outside your organization) before the information is used to make decisions about an individual? For example, is there a computer matching agreement in place with another government agency? For systems that receive data from internal data sources or VA IT systems, describe the system checks to ensure that data corruption has not occurred during transmission.

The SCW system does not communicate with any outside systems to check data for accuracy. The purpose of the SCW system is to collect ESI in the state that it is maintained. This is because the parties involved in litigation must be able to review the ESI in the form that it existed at the time the duty to preserve arisen. Wrongful alteration of evidence, including ESI, is improper under the rules of law.
1.4b If the system checks for accuracy by accessing a commercial aggregator of information, describe this process and the levels of accuracy required by the contract.

N/A

1.5 What specific legal authorities, arrangements, and agreements defined the collection of information?

List the full legal authority for operating the system, specifically the authority to collect the information listed in question 1.1. Provide the authorities in a manner understandable to any potential reader, i.e., do not simply provide a legal citation; use statute names or regulations in addition to citations. Legal authorities include Federal laws, regulations, statutes, and Executive Orders. This question is related to privacy control AP-1, Authority to Collect.

As stated above, the preservation, collection and production of ESI is required by:

-- The FRCP, which explicitly require parties in litigation to preserve and produce ESI.
-- The Constitution, which empowers Congress to obtain information from federal agencies.
-- The Freedom of Information Act (FOIA), which requires agencies to disclose information in electronic form; and
-- The Privacy Act of 1974 and the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule, both of which require that an individual be provided access to his/her own records, including electronic information.

Additionally, this system currently has full Authority to Operate. This PIA is completed to address system name change and request for a new ATO based on major system upgrade.

1.6 PRIVACY IMPACT ASSESSMENT: Characterization of the information

Consider the specific data elements collected and discuss the potential privacy risks and what steps, if any are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete this section)

Consider the following Fair Information Practice Principles (FIPPs) when assessing the risk to individual privacy:

Principle of Purpose Specification: Explain how the collection ties with the purpose of the underlying mission of the organization and its enabling authority.

Principle of Minimization: Is the information directly relevant and necessary to accomplish the specific purposes of the program?

Principle of Individual Participation: Does the program, to the extent possible and practical, collect information directly from the individual?
Principle of Data Quality and Integrity: Are there policies and procedures for VA to ensure that personally identifiable information is accurate, complete, and current?

This question is related to privacy control AR-1, Governance and Privacy Program, and AR-2, Privacy Impact and Risk Assessment.

Follow the format below when entering your risk assessment:

**Privacy Risk:** As a cabinet-level agency of the U.S. Government, the VA is required by law to preserve ESI, as stated previously. Moreover, in litigation, the VA is required to search all possible locations where evidence may be found. The privacy risk is mitigated by the attorneys working directly with relevant custodians to assess what information may be in the VA’s possession, and then collecting that information.

**Mitigation:** Information is collected directly from VA IT systems and transferred to the SCW platform electronically. Redaction of some information is required by law and further protects the privacy interests of any SPI that may appear in the data.

The information may not be shared with anyone who is not a party to the litigation. Additionally, federal statutes require the redaction of certain information so that even when information is produced, it is redacted when required by law. Other federal laws allow for the withholding of information subject to privileges, such as the attorney-client privilege and attorney work product rule. Federal Rule of Evidence 501 describes the law of privilege in general.

**Section 2. Uses of the Information**

The following questions are intended to clearly delineate the use of information and the accuracy of the data being used.

**2.1 Describe how the information in the system will be used in support of the program’s business purpose.**

*Identify and list each use (both internal and external to VA) of the information collected or maintained. This question is related to privacy control AP-2, Purpose Specification.*

OGC is responsible for representing the VA in all legal matters. To accomplish this purpose, VA must collect ESI relevant to any pending or reasonably anticipated litigation. ESI stored in VA IT systems is collected by the OIT, it is processed through SCW and then it is reviewed for relevancy by OGC attorneys or staff. If a lawsuit has been filed, then the ESI will be shared with DOJ attorneys (see Section 5). ESI is then produced to opposing parties in litigation as required under the FRCP. Thus, ESI collected and stored in SCW may be disclosed to parties in litigation; however, ESI stored in SCW may only be produced to a party with a claim relevant to that ESI. For example, if Party A files an EEO claim against VA, then OGC may collect ESI relevant to Party A’s claim, and VA may be required to produce relevant, unprivileged ESI to Party A and her attorney. However, nobody else will be given that information unless a judge orders its release. Moreover, as stated above, information is redacted before it is released when required by law.
Should it be in a collected document, the following information may be collected:

Name: Confirm Veteran’s identification-internal
Social Security Number: Confirm Veteran identity, create file number for Veteran - internal
Security Administration benefits -internal
Date of Birth: Confirm Veteran identity and benefits -internal
Mailing Address: Contact and correspondence with Veteran-internal
Zip Code: Part of mailing address-internal
Phone numbers: Contact Veteran-internal
Email Address: Contact Veteran-internal
Health Insurance Beneficiary – Person who receives the benefits in case of death
Numbers Account numbers - Coincidentally collected when received in electronic documents but not required.
Certificate/License numbers Vehicle License Plate Number-Confirms license numbers and vehicle plate
Internet Protocol (IP) Address- Coincidentally collected when received in electronic documents but not required.
Current Medications- Coincidentally collected when received in electronic documents but not required.
Previous Medical Records- Coincidentally collected when received in electronic documents but not required.
Race/Ethnicity- Coincidentally collected when received in electronic documents but not required.

2.2 What types of tools are used to analyze data and what type of data may be produced?
These questions are related to privacy controls DI-1, Data Quality, DI-2, Data Integrity and Integrity Board, and SE-1, Inventory of Personally Identifiable Information.

2.2a Many systems sift through large amounts of information in response to a user inquiry or programmed functions. Systems may help identify areas that were previously not obvious and need additional research by agents, analysts, or other employees. Some systems perform complex analytical tasks resulting in, among other types of data, matching, relational analysis, scoring, reporting, or pattern analysis. Describe any type of analysis the system conducts and the data that is created from the analysis.

SCW sifts through large amounts of collected ESI to find documents, usually emails, MS Office or similar files. Those documents can then be searched for keywords or information relevant to litigation, which can be marked for future reference, collected into groups, etc. The system includes functionality for masking or redacting data as required by law. Once the information is organized and searched, it is reviewed by an attorney for relevance to the litigation and then may be redacted (if required by law) and produced to other parties in the litigation pursuant to the FRCP.

2.2b If the system creates or makes available new or previously unutilized information about an individual, explain what will be done with the newly derived information. Will it be placed in the individual’s existing record? Will a new record be created? Will any action be taken against or for the individual identified because of the newly derived data? If a new record is created, will the newly created information be accessible to Government employees who make determinations about the individual? If so, explain fully under which circumstances and by whom that information will be used.
(SCW) eDiscovery Clearwell does not create new information, nor does it make new information available. eDiscovery Clearwell is a tool that indexes data on a secured storage device and is only accessible by authorized users and authenticated through Active Directory.

2.3 How is the information in the system secured?
These questions are related to security and privacy controls SC-9, Transmission Confidentiality, and SC-28, Protection of Information at Rest.

2.3a What measures are in place to protect data in transit and at rest?

Encryption of data is Data in Transit; Data at Rest is stored on secured servers that are only accessible through VA Strong Authorization and authenticated through Active Directory.

2.3b If the system is collecting, processing, or retaining Social Security Numbers, are there additional protections in place to protect SSNs?

Social Security numbers are not required information. Clearwell indexes electronic documents indiscriminately. Any PII collected is purely coincidental and are covered by the previously stated security.

2.3c How is PII/PHI safeguarded in accordance with OMB Memorandum M-06-15?

Clearwell indexes electronic documents indiscriminately. Any PII collected is purely coincidental and are covered by the previously stated security. System access, case access, user roles are all subject to specific authorization and permission.

2.4 PRIVACY IMPACT ASSESSMENT: Use of the information.

Describe any types of controls that may be in place to ensure that information is handled in accordance with the uses described above. Example: Describe if training for users of the project covers how to appropriately use information. Describe the disciplinary programs or system controls (i.e. denial of access) that are in place if an individual is inappropriately using the information.

Consider the following FIPPs below to assist in providing a response:

Principle of Transparency: Is the PIA and SORN, if applicable, clear about the uses of the information?

Principle of Use Limitation: Is the use of information contained in the system relevant to the mission of the project?
This question is related to privacy control AR-4, Privacy Monitoring and Auditing, AR-5, Privacy Awareness and Training, and SE-2, Privacy Incident response.
2.4a How is access to the PII determined?

All attorneys have a legal obligation as officers of the court licensed to practice law in one of the fifty states to preserve the confidentiality of ESI. Attorneys may be subject to discipline by their state bar association and may lose their license to practice law if they improperly disclose information learned in the course of practicing law. Additionally, attorneys have an obligation to supervise staff working under their control to verify that staff is following the same confidentiality standards that attorneys must follow.

Use limitation is also controlled by the litigation. No party may access ESI stored in the SCW system unless they have a right under the FRCP and other federal privacy laws. Also, SCW has administrator-controlled permissions that can be set for each user to control what type of access they have to the system.

Accounts are approved, created and granted using the Access Request Form (VA Form 9957) additionally, the form gathers appropriate level of approval for requested access. System Administrators manage all accounts using this form and a Service Desk Manager (SDM) ticket. Termination and transfer are also handled with VA Form 9957. This procedure is documented in the system security plan as follows:

Application:

VBA information systems employ automated mechanisms to support information systems account management. The use of automated mechanisms ensures that account creation, modification, disabling, and termination are auditable and that appropriate personnel are notified of these occurrences. VBA information systems utilize Group Policy Objects (GPO) to manage accounts. GPO is a set of rules which control the working environment of user accounts and computer accounts. Group policy Objects provides the centralized management and configuration of operating Systems, applications and users' settings in an Active Directory environment. Group policy objects restrict certain actions that may pose potential security risks. Infrastructure Operations (IO) manages information system accounts, including establishing, activating, modifying, reviewing, disabling, and removing accounts for hardware components (application server, web server, database server, policy server) that reside at the IO. IO does not establish access control requirements for users. IO reviews information system accounts every 90 days.

Windows System Administration:

Accounts are created manually. Manual monthly reports are done to identify inactive accounts. Accounts are manually disabled if the account has not been active for over 90 days.

Linux System Administration:

Accounts are created manually. A cron job checks for accounts that have been inactive for 90 days and locks those accounts.

As an account approaches expiration, notifications are sent by the cron job to users. The cron job creates a ticket for system admins to remove an account after it has been inactive for over 180 days.
Accounts are created manually. A script runs daily looking for accounts that have been inactive over 90 days. For any account that is found, a notification is sent out for manual removal.

Oracle Application Server, Database Server and OBIEE include features that are designed to permit only authorized access to or within the system, to restrict users to authorized transactions and functions, and to detect unauthorized activities. Only authenticated user IDs are permitted to have access to VD2 and its interfaces. Austin CFD accounts are enforced at the database level. User access has been restricted (least privilege) to data files and processing capability (i.e., read, write, execute, delete) to the minimum necessary to perform the job.

a) Account types individual accounts (admins only), global groups and service accounts. The guest account is disabled and there is no anonymous access. There should be no local accounts; the exception to this is the Technical Security scanning account for DMZ servers.

b) Group accounts are created through the VA form 9957 processes.

c) VA form 9957 are used when creating accounts and granting appropriate access.

d) VA form 9957 are used to gather appropriate approvals for access.

e) Infrastructure admins manage all active directory accounts. Accounts are provisioned only upon a VA form 9957 or appropriate USD ticket.

f) Guest/anonymous and temporary accounts are not allowed.

g) Temporary accounts and “need-to-know” changes aren’t applicable. For terminations and transfers, the VA form 9957 process makes sure all access changes are handled.

h) Account deletions are done SDM ticket or VA form 9957.

i) The VA form 9957 process covers expected usage, necessary access, etc.

j) Account reviews are not performed.

Linux:

a) Guest/anonymous and temporary accounts don’t exist. There are individual accounts, service accounts for monitoring and applications (WebLogic, Patrol, Nagios and Oracle) and group accounts users can run commands as.

b) Group accounts are built in as part of the install routine; there are open VA form 9957 tickets for those accounts. Individual users are later defined as a member of the group.

c) VA form 9957 are used when creating accounts and granting appropriate access.

2.4b Are criteria, procedures, controls, and responsibilities regarding access documented?

Yes the SCW application procedures, controls, and responsibilities are documented in eMass and the Authorization Requirements SOP Guide

2.4c Does access require manager approval?

Yes, Manager approval is required for VA9957 approval.

2.4d Is access to the PII being monitored, tracked, or recorded?

Clearwell sits on the VA network behind multiple firewalls and is not accessible outside of the VA Network. Access is monitored and logged by A.D., and Clearwell.

2.4e Who is responsible for assuring safeguards for the PII?
The Windows (Wintel) and Legal Hold teams that support the storage devices that hold data maintain safeguards for all case data.

**Section 3. Retention of Information**

The following questions are intended to outline how long information will be retained after the initial collection.

**3.1 What information is retained?**

*Identify and list all information collected from question 1.1 that is retained by the system.*

This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

All information that is collected is not retained on the eDiscovery Clearwell servers. Through a process called “pre-processing” and “processing,” systems files and other irrelevant files are deleted from the case file to prevent unnecessary use of server storage space and inadvertent disclosure of sensitive data not relevant to the case. The information that is retained is the emails, MS Office files and other relevant ESI.

**3.2 How long is information retained?**

*In some cases, VA may choose to retain files in active status and archive them after a certain period of time. State active file retention periods, as well as archived records, in number of years, for the information and record types. For example, financial data held within your system may have a different retention period than medical records or education records held within your system, please be sure to list each of these retention periods. The VA records officer should be consulted early in the development process to ensure that appropriate retention and destruction schedules are implemented. If the system is using cloud technology, will it be following the NARA approved retention length and schedule? This question is related to privacy control DM-2, Data Retention and Disposal.*

All information that is collected becomes a part of the Office of General Counsel’s litigation case records. OGC’s official system of records for litigation cases is 16VA026. The retention period will vary on a case-by-case basis. The retention periods are explained further in the OGC Version Date: May 1, 2021Page 15 of 37Records Control Schedule. For example, Equal Employment Opportunity (EEO) cases must be preserved for four years after resolution of the case.

**3.3 Has the retention schedule been approved by the VA records office and the National Archives and Records Administration (NARA)?**

*An approved records schedule must be obtained for any IT system that allows the retrieval of a record via a personal identifier. The VA Records Officer will assist in providing a proposed schedule. The schedule must be formally offered to NARA for official approval. Once NARA approves the proposed schedule, the VA records officer will notify the system owner. This question is related to privacy control DM-2, Data Retention and Disposal.*
3.3a Are all records stored within the system of record indicated on an approved disposition authority?

The VA Office of General Counsel Records Control Schedule (N1-15-06-2) has been approved by NARA. ESI in the SCW system will become a part of official litigation case file, as described in section 3.2. SCW temporarily retains data for litigation cases involving the VA. Once the case is closed, ESI in the SCW system will become part of the official litigation case file record. The data will be moved to ITOPS to be archived and will be retained in accordance with OGC records control schedule (RCS). It will also be retained in accordance with the OGC Records Control Schedule 10-1 March 2017 [Records Control Schedules | National Archives]

3.3b Please indicate each records retention schedule, series, and disposition authority.

Retention schedule and disposition authority are determined by the VA customer. Currently, they are OGC and OAWP.

3.4 What are the procedures for the elimination or transfer of SPI?

Explain how records are destroyed, eliminated or transferred to NARA at the end of their mandatory retention period. Please give the details of the process. For example, are paper records shredded on site, or by a shredding company and accompanied by a certificate of destruction, etc.? This question is related to privacy control DM-2, Data Retention and Disposal.

Disposition of Printed Data: Forms and other types of printed output produced by any computer systems and related peripherals will be evaluated by the responsible staff member for data sensitivity. Printed output containing sensitive data will be stored in locked cabinets or desks and disposed of properly (when the approved records schedule permits destruction) by shredding or similar VA approved methods in accordance with VA Directive 6371. Program listings and documentation relating to the use of or access to a computer system require special handling if the listings or documentation provide information about a system which processes sensitive data. VA personnel are responsible for retrieving/removing all printed outputs they request from printers. VBA Records Management, Records Control Schedule VB-1, Part 1, Section VII as authorized by NARAVB-1 Part II can be found at: [https://www.benefits.va.gov/WARMS/docs/regs/RCS_IL.doc](https://www.benefits.va.gov/WARMS/docs/regs/RCS_IL.doc) and [http://www.benefits.va.gov/WARMS/21guides.asp](http://www.benefits.va.gov/WARMS/21guides.asp) Additional information can be found at: [https://www.archives.gov/files/records-mgmt/rcs/schedules/departments/department-of-veterans-affairs/rg-0015/n1-015-90-001_sf115.pdf](https://www.archives.gov/files/records-mgmt/rcs/schedules/departments/department-of-veterans-affairs/rg-0015/n1-015-90-001_sf115.pdf)

3.5 Does the system, where feasible, use techniques to minimize the risk to privacy by using PII for research, testing, or training?

Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. These uses of PII increase the risks associated with the unauthorized disclosure or misuse of the information. Please explain what controls have been implemented to protect PII used for testing, training and research. This question is related to privacy control DM-3, Minimization of PII Used in Testing, Training and Research.
Yes. The SCW application is designed to be deployed behind the Firewall and other network security
devices and is not “Web” facing. Clearwell utilizes password protection for local accounts and user roles
limiting case access to only those accounts with express permissions.
In addition, eDiscovery Clearwell in conjunction with Windows Local and Active Directory security to
limit access to system files and case information.
The data used in test and development is standard data used in eDiscovery industry. The data does not
contain any real PII.

3.6 PRIVACY IMPACT ASSESSMENT: Retention of information
Discuss the risks associated with the length of time data is retained and what steps, if any, are
currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all
Privacy Risk questions inside the document this section).

While we understand that establishing retention periods for records is a formal process, there are
policy considerations behind how long a project keeps information. The longer a project retains
information, the longer it needs to secure the information and assure its accuracy and integrity. The
proposed schedule should match the requirements of the Privacy Act to keep the minimum amount of
PII for the minimum amount of time, while meeting the Federal Records Act. The schedule should
align with the stated purpose and mission of the system.

Consider the following FIPPs below to assist in providing a response:

**Principle of Minimization:** Does the project retain only the information necessary for its purpose? Is
the PII retained only for as long as necessary and relevant to fulfill the specified purposes?

**Principle of Data Quality and Integrity:** Has the PIA described policies and procedures for how PII
that is no longer relevant and necessary is purged?
This question is related to privacy controls DM-1, Minimization of Personally Identifiable
Information, and DM-2, Data Retention and Disposal.

Follow the format below:

**Privacy Risk:** As described herein, information is pulled from VA IT systems into SCW in response
to legal requirements. Information may not be deleted until the legal need for the collection and
preservation of ESI has passed. Cost to use the system increases as the amount of data collected
increases. Additionally, the personnel and time required to review data in SCW increases as the
amount of data increases.

There is a risk that the information maintained by SCW could be retained for longer than is necessary
to fulfill the VA mission. Records held longer than required are at greater risk of being
unintentionally released or breached.

**Mitigation:** Redaction of some information is required by law which reduces the risk and protects
the privacy interest of any individual who may have SPI, PII or PHI which may appear in the data
and files collected.
All users must be authenticated on the VA network, have a PIV card and be approved by VA for
access.
Data is received and sent using encrypted methods. The EDW is a working repository of electronically copied business line data. It is kept as needed per RCS, VB-1 Part II, Section 1-6.2 (Non-record sensitive material extracted from a system of storage). Destroy when no longer needed.

Section 4. Internal Sharing/Receiving/Transmitting and Disclosure

The following questions are intended to define the scope of information sharing/receiving/transmitting within VA.

4.1 With which internal organizations is information shared/received/transmitted? What information is shared/received/transmitted, and for what purpose? How is the information transmitted?

NOTE: Question 3.9 (second table) on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any program offices, contractor-supported IT systems, and any other organization or IT system within VA with which information is shared.

State the purpose for the internal sharing. If you have specific authority to share the information, provide a citation to the authority.

For each interface with a system outside your program office, state what specific data elements (PHI/PII) are shared with the specific program office, contractor-supported IT system, and any other organization or IT system within VA.

Describe how the information is transmitted. For example, is the information transmitted electronically, by paper, or by some other means? Is the information shared in bulk, on a case-by-case basis, or does the sharing partner have direct access to the information?

This question is related to privacy controls AP-2, Purpose Specification, AR-3, Privacy Requirements for Contractors and Service Providers, AR-8, Accounting of Disclosures, TR-1, Privacy Notice, and UL-1, Internal Use.

Data Shared with Internal Organizations

<td></td>
<td></td>
</tr>
</tbody>
</table>

OGC does not intend to share information in SCW with any other VA offices. When OIT collects and processes data, the information is used to defend or prosecute lawsuits filed against or by the United States. In such cases, the information is used by the attorneys (VA and DOJ) who are assigned to the case. The attorney may discuss emails or MS Office files, for example, with the VA employees or other persons who are involved in the litigation. That is done through interviews and depositions with the persons who are relevant to the litigation.

4.2 PRIVACY IMPACT ASSESSMENT: Internal sharing and disclosure

Discuss the privacy risks associated with the sharing of information within the Department and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

This question is related to privacy control UL-1, Internal Use.

Follow the format below:

**Privacy Risk:** Access to the application is restricted to OGC employees and to two application administrators from Infrastructure Operations.

The privacy risk associated with transmitting SPI within the Department of Veterans’ Affairs is that the data may be disclosed to individuals who do not require access or have a need to know. Inappropriate/unauthorized disclosure heightens the threat of the information being misused.

**Mitigation:** During the review process all privacy protected information that is protected by federal and state law that is not material to the litigation, such as SPI of a person not relevant to the litigation, would be redacted.
Access to the application is restricted to authorized VA employees and contractors which may include, but are not limited to: OGC, FOIA, and to application administrators from EPMO.

**Section 5. External Sharing/Receiving and Disclosure**

The following questions are intended to define the content, scope, and authority for information sharing external to VA, which includes Federal, State, and local governments, and the private sector.

5.1 With which external organizations (outside VA) is information shared/received? What information is shared/received, and for what purpose? How is the information transmitted and what measures are taken to ensure it is secure?

Is the sharing of information outside the agency compatible with the original collection? If so, is it covered by an appropriate routine use in a SORN? If not, please describe under what legal mechanism the IT system is allowed to share the information in identifiable form or personally identifiable information outside of VA.

**NOTE:** Question 3.10 on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any Federal, State, or local government agency or private sector organization with which information is shared.

For each interface with a system outside VA, state what specific data elements (PII/PHI) are shared with each specific partner.

What legal mechanisms, authoritative agreements, documentation, or policies are in place detailing the extent of the sharing and the duties of each party? For example, is the sharing of data compatible with your SORN? Then list the SORN and the applicable routine use from the SORN. Is there a Memorandum of Understanding (MOU), Computer Matching Agreement (CMA), or law that mandates the sharing of this information?

Describe how the information is transmitted to entities external to VA and what security measures have been taken to protect it during transmission.

This question is related to privacy control UL-2, Information Sharing with Third Parties

**Data Shared with External Organizations**

<table>

5.2 PRIVACY IMPACT ASSESSMENT: External sharing and disclosure

Discuss the privacy risks associated with the sharing of information outside the Department and what steps, if any, are currently being taken to mitigate those identified risks.

Discuss whether access controls have been implemented and whether audit logs are regularly reviewed to ensure appropriate sharing outside of the Department. For example, is there a Memorandum Of Understanding (MOU), contract, or agreement in place with outside agencies or foreign governments.

Discuss how the sharing of information outside of the Department is compatible with the stated purpose and use of the original collection.

This question is related to privacy control AR-2, Privacy Impact and Risk Assessment, AR-3, Privacy Requirements for Contractors and Service Providers, and AR-4, Privacy Monitoring and Auditing.

Follow the format below:

Privacy Risk: Access to the application is restricted to OGC employees and to two application administrators from Infrastructure Operations.

The privacy risk associated with transmitting SPI within the Department of Veterans’ Affairs is that the data may be disclosed to individuals who do not require access or have a need to know. Inappropriate/unauthorized disclosure heightens the threat of the information being misused.

Mitigation: As stated above, the Department of Justice represents the Department of Veterans Affairs in all litigation matters. All ESI collected and processed through SCW is collected for an actual case being litigated in federal court must be given to DOJ so that its attorneys can review the information for relevancy to the litigation. Additionally, as stated previously, ESI is collected because it is required by law when one party files a lawsuit against another. Thus, DOJ or OGC is required by law to disclose relevant, unprivileged ESI to the parties to the lawsuit. Information is transferred in secure, encrypted hard drives. Additionally, there are no electronic connections to external organizations or systems.

Section 6. Notice

The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information.

6.1 Was notice provided to the individual before collection of the information? If yes, please provide a copy of the notice as an Appendix-A 6.1 on the last page of the document. Also provide notice given to individuals by the source system (A notice may include a posted privacy policy, a Privacy Act notice on forms, or a system of records notice published in the Federal Register.) If notice was not provided, why not?

These questions are related to privacy control TR-1, Privacy Notice, and TR-2, System of Records Notices and Privacy Act Statements, and TR-3, Dissemination of Privacy Program Information.
6.1a This question is directed at the notice provided before collection of the information. This refers to whether the person is aware that his or her information is going to be collected. A notice may include a posted privacy policy, a Privacy Act statement on forms, or a SORN published in the Federal Register, Notice of Privacy Practice provided to individuals for VHA systems. If notice was provided in the Federal Register, provide the citation.

Specific notice of a collection is not required, however, “custodians” (anyone who may have relevant information) would normally receive notice of the possibility that ESI may be collected from computers and accounts that they use. For example, in most OGC cases, the first step is to use SCW to send a custodian a “litigation hold notice,” which is a document that describes the pending or anticipated litigation and the information that the custodian must retain that is relevant to the litigation. Not all litigation hold notices will result in the collection of ESI from each custodian. If it is determined that ESI must be collected from a custodian that is achieved through coordination with OIT. The custodian may be aware of the collection because of their involvement in the pending or anticipated litigation, but notice is not required.

6.1b If notice was not provided, explain why. If it was provided, attach a copy of the current notice.

6.1c Describe how the notice provided for the collection of information is adequate to inform those affected by the system that their information has been collected and is being used appropriately. Provide information on any notice provided on forms or on Web sites associated with the collection.

Most data is collected from users that are no longer employed at the VA. Any data collected from currently employed users are notified by the Legal Hold team that provides the requested data for processing.

6.2 Do individuals have the opportunity and right to decline to provide information? If so, is a penalty or denial of service attached?

This question is directed at whether the person from or about whom information is collected can decline to provide the information and if so, whether a penalty or denial of service is attached. This question is related to privacy control IP-1, Consent, IP-2, Individual Access, and IP-3, Redress.

A custodian may not decline to provide information, as all information is pulled from VA IT systems and devices. All VA employees consent to the collection of their data on VA systems and devices.

6.3 Do individuals have the right to consent to particular uses of the information? If so, how does the individual exercise the right?

This question is directed at whether an individual may provide consent for specific uses or the consent is given to cover all uses (current or potential) of his or her information. If specific consent is required, how would the individual consent to each use? This question is related to privacy control IP-1, Consent.
Consent to particular uses is not applicable. All data collected by SCW is used for litigation.

6.4 PRIVACY IMPACT ASSESSMENT: Notice

Describe the potential risks associated with potentially insufficient notice and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Has sufficient notice been provided to the individual?

**Principle of Use Limitation:** Is the information used only for the purpose for which notice was provided either directly to the individual or through a public notice? What procedures are in place to ensure that information is used only for the purpose articulated in the notice?

This question is related to privacy control TR-1, Privacy Notice, AR-2, Privacy Impact and Risk Assessment, and UL-1, Internal Use.

Follow the format below:

**Privacy Risk:** Not applicable, as notice is not required when collecting data for litigation. A custodian may not decline to provide information, as all information is pulled from VA IT systems and devices.

**Mitigation:** Not applicable, as notice is not required when collecting data for litigation. All ESI collected and processed through SCW is collected for an actual case being litigated in court.

Section 7. Access, Redress, and Correction

The following questions are directed at an individual’s ability to ensure the accuracy of the information collected about him or her.

**7.1 What are the procedures that allow individuals to gain access to their information?**

These questions are related to privacy control IP-2, Individual Access, and AR-8, Accounting of Disclosures.

7.1a Cite any procedures or regulations your program has in place that allow access to information. These procedures, at a minimum, should include the agency’s FOIA/Privacy Act practices, but may also include additional access provisions. For example, if your program has a customer satisfaction unit, that information, along with phone and email contact information, should be listed in this section in addition to the agency’s procedures. See 5 CFR 294 and the VA FOIA Web page at http://www.foia.va.gov/ to obtain information about FOIA points of contact and information about agency FOIA processes.

There is no requirement for users to be permitted to gain access to the information once it is imported into the eDiscovery Clearwell system. The attorney-client privilege and attorney work-product rule allow for
the confidentiality of attorney case files. As the information in SCW is considered part of the case file, it is exempt from disclosure.

7.1b If the system is exempt from the access provisions of the Privacy Act, please explain the basis for the exemption or cite the source where this explanation may be found, for example, a Final Rule published in the Code of Federal Regulations (CFR).

N/A

7.1c If the system is not a Privacy Act system, please explain what procedures and regulations are in place that covers an individual gaining access to his or her information.

Data access is controlled at the network, system, and case level. Users are not granted access to cases that may have their information.

7.2 What are the procedures for correcting inaccurate or erroneous information?

Describe the procedures and provide contact information for the appropriate person to whom such issues should be addressed. If the correction procedures are the same as those given in question 7.1, state as much. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

There is no requirement for the application or individuals to correct the information for accuracy. As stated previously, the purpose of the SCW system is actually to preserve information exactly as it was kept in the normal course of VA operations, to review it and potentially to share it in its native format with other parties and the court, as required by law.

7.3 How are individuals notified of the procedures for correcting their information?

How are individuals made aware of the procedures for correcting his or her information? This may be through notice at collection or other similar means. This question is meant to address the risk that even if procedures exist to correct information, if an individual is not made fully aware of the existence of those procedures, then the benefits of the procedures are significantly weakened. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

Not applicable. As stated above, data is to be collected and preserved in the exact state that it was maintained. In fact, if custodians were allowed to change the data that would be a violation of law for which the United States and VA could be sanctioned by a federal judge.

7.4 If no formal redress is provided, what alternatives are available to the individual?

Redress is the process by which an individual gains access to his or her records and seeks corrections or amendments to those records. Redress may be provided through the Privacy Act and Freedom of Information Act (FOIA), and also by other processes specific to a program, system, or
group of systems. **Example: Some projects allow users to directly access and correct/update their information online. This helps ensure data accuracy.**

This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

Not applicable. As stated above, data is to be collected and preserved in the exact state that it was maintained. In fact, if custodians were allowed to change the data that would be a violation of law for which the United States and VA could be sanctioned by a federal judge.

### 7.5 PRIVACY IMPACT ASSESSMENT: Access, redress, and correction

Discuss what risks there currently are related to the Department’s access, redress, and correction policies and procedures for this system and what, if any, steps have been taken to mitigate those risks. **For example, if a project does not allow individual access, the risk of inaccurate data needs to be discussed in light of the purpose of the project. For example, providing access to ongoing law enforcement activities could negatively impact the program’s effectiveness because the individuals involved might change their behavior.** (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

**Principle of Individual Participation:** Is the individual provided with the ability to find out whether a project maintains a record relating to him?

**Principle of Individual Participation:** If access and/or correction is denied, then is the individual provided notice as to why the denial was made and how to challenge such a denial?

**Principle of Individual Participation:** Is there a mechanism by which an individual is able to prevent information about him obtained for one purpose from being used for other purposes without his knowledge?

This question is related to privacy control IP-3, Redress.

Follow the format below:

**Privacy Risk:** Not applicable. As stated above, data is to be collected and preserved in the exact state that it was maintained.

**Mitigation:** Not applicable. As stated above, data is to be collected and preserved in the exact state that it was maintained.

### Section 8. Technical Access and Security

The following questions are intended to describe technical safeguards and security measures.

**8.1 What procedures are in place to determine which users may access the system, and are they documented?**

These questions are related to privacy control AR-7, Privacy-Enhanced System Design and Development.

8.1a Describe the process by which an individual receives access to the system.
Per VA Directive and Handbook 6330, every 5 years the Office of Information Technology (OIT) develops, disseminates, and reviews/updates a formal, documented policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; along with formal, documented procedures to facilitate the implementation of the control policy and associated controls.

OIT documents and monitors individual information system security training activities including basic security awareness training and specific information system security training; This documentation and monitoring is performed through the use of TMS.

The access to the system in granted per request by OGC Information Law Group Chief Council. Both a supervisor of the employee requesting to open a case and an OGC E-discovery Program Manager (OEPM) must approve a request to open a new case. The access is granted to an individual attorney to the data scope identified by the OEPM.

The roles in the system are as follows:
- System administrator – complete access to the system and data
- Case Administrator’s, Case Manager’s, and Case Users can be customized. Options below can be granted or removed:
  - General Rights:
    - Allow integrated analytics access
    - Allow analysis tags dashboard access
    - Allow access to management charts
    - Allow reports access
    - Allow mobile access
  - Document Access Rights:
    - Allow viewing
    - Allow tagging
    - Allow move or removing from folders
    - Allow bulk tagging
    - Allow smart tagging
    - Allow viewing of prediction ranks
    - Allow predictive coding actions
    - Allow access to tag event comments
    - Allow access to item notes
    - Allow redacting
    - Prompt for reason code
    - Allow tag history viewing
    - Allow tag history searching
    - Allow exporting
    - Allow printing
    - Allow native download
    - Allow media streaming
    - Allow caching for review
    - Allow searching and filtering by processing flags
  - Case Administration Rights:
    - Allow case status access
    - Allow case processing source setup
Allow user management
Allow activity report access
Allow group and topic management
Allow tag definition
Allow folder setup
Allow folder check-out management
Allow production folder management
Allow unlocking of production folders after export
Allow custodian management
Allow participant management
Allow viewing exceptions
Allow managing exceptions
Allow OCR processing
Allow image management

Additionally, access can be further modified per folder, per document and per identification tag group basis.

8.1b Identify users from other agencies who may have access to the system and under what roles these individuals have access to the system. Who establishes the criteria for what PII can be shared?

Only VA users have access to eDiscovery Clearwell.

8.1c Describe the different roles in general terms that have been created to provide access to the system. For example, certain users may have "read-only" access while others may be permitted to make certain amendments or changes to the information.

See table below:

<table>
<thead>
<tr>
<th>Role</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Case Admin</td>
<td>Administrator-level access to one or more cases (includes case admin capabilities plus all case user rights)</td>
</tr>
<tr>
<td>Case Manager</td>
<td>Manager-level access to one or more cases (includes case admin capabilities (except source setup rights) plus all case user rights)</td>
</tr>
<tr>
<td>Case User</td>
<td>Search, tagging, and print dashboard rights to one or more cases</td>
</tr>
<tr>
<td>Collection Admin</td>
<td>Administrator-level collection set management</td>
</tr>
<tr>
<td>eDiscovery Admin</td>
<td>Administrator-level access to one or more cases as well as well as collection set</td>
</tr>
<tr>
<td>Role</td>
<td>Access and Responsibilities</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>---------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Group Admin</td>
<td>Administrator-level access to all entities within one or more group(s).</td>
</tr>
<tr>
<td>Legal Hold Admin</td>
<td>Administrator-level legal hold management</td>
</tr>
<tr>
<td>OGC Case Manager</td>
<td>Case Lead attorney / senior document reviewer</td>
</tr>
<tr>
<td>OGC Case User</td>
<td>User with limited access - reviewer; no bulk tagging/predictive coding</td>
</tr>
<tr>
<td>OGC eDiscovery Admin Staff</td>
<td>OGC Law group user with user management rights (lead) - Carmela</td>
</tr>
<tr>
<td>OGC eDiscovery Operations Staff</td>
<td>OGC eDiscovery Operations Staff members</td>
</tr>
<tr>
<td>System Manager</td>
<td>Unrestricted rights to manage entire Clearwell system, including administrator-level access to all cases</td>
</tr>
</tbody>
</table>

8.2 Will VA contractors have access to the system and the PII? If yes, what involvement will contractors have with the design and maintenance of the system? Has a contractor confidentiality agreement, Business Associate Agreement (BAA), or a Non-Disclosure Agreement (NDA) been developed for contractors who work on the system?

If so, how frequently are contracts reviewed and by whom? Describe the necessity of the access provided to contractors to the system and whether clearance is required. If Privacy Roles and Responsibilities have been established to restrict certain users to different access levels, please describe the roles and associated access levels. Explain the need for VA contractors to have access to the PII. This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

OIT provides basic security awareness training to all information system users (including managers, senior executives, and contractors) of VA information systems or VA sensitive information as part of initial training for new users, when required by system changes and annually thereafter.

8.3 Describe what privacy training is provided to users either generally or specifically relevant to the program or system?

VA offers privacy and security training. Each program or system may offer training specific to the program or system that touches on information handling procedures and sensitivity of information. Please describe how individuals who have access to PII are trained to handle it appropriately. This question is related to privacy control AR-5, Privacy Awareness and Training.
Personnel that will be accessing VA sensitive information and/or VA information systems must read and acknowledge their receipt and acceptance of the VA National Rules of Behavior (ROB) or VA Contractor’s ROB prior to gaining access to any VA information system or sensitive information. The rules are included as part of the security awareness training which all personnel must complete via the VA’s Talent Management System (TMS). After the user’s initial acceptance of the Rules, the user must re-affirm their acceptance annually as part of the security awareness training. Acceptance is obtained via electronic acknowledgment and is tracked through the TMS system. System administrators and elevated privileged users are required to complete additional role-based training.

8.4 Has Authorization and Accreditation (A&A) been completed for the system?

8.4a If Yes, provide:

1. The Security Plan Status: SSP is located in eMass on the artifacts tab (Active)
2. The System Security Plan Status Date: 04/13/2023
3. The Authorization Status: ATO (Active)
4. The Authorization Date: 06/19/2023
5. The Authorization Termination Date: 09/12/2023
6. The Risk Review Completion Date: 05/31/2023
7. The FIPS 199 classification of the system (LOW/MODERATE/HIGH): Moderate

Please note that all systems containing SPI are categorized at a minimum level of “moderate” under Federal Information Processing Standards Publication 199.

8.4b If No or In Process, provide your Initial Operating Capability (IOC) date.

Please provide response here

Section 9 – Technology Usage

The following questions are used to identify the technologies being used by the IT system or project.

9.1 Does the system use cloud technology? If so, what cloud model is being utilized?

If so, Does the system have a FedRAMP provisional or agency authorization? If the system does use cloud technology, but does not have FedRAMP authorization, explain how the Cloud Service Provider (CSP) solution was assessed and what FedRAMP documents and processes were used for the assessment in order to comply with VA Handbook 6517. Types of cloud models include: Software as a Service (SaaS), Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Commercial off the Shelf (COTS), Desktop as a Service (DaaS), Mobile Backend as a Service (MBaaS), Information Technology Management as a Service (ITMaaS). This question is related to privacy control UL-1, Information Sharing with Third Parties.

Note: For systems utilizing the VA Enterprise Cloud (VAEC), no further responses are required after 9.1. (Refer to question 3.3.1 of the PTA)

No
9.2 **Does the contract with the Cloud Service Provider, Contractors and VA customers establish who has ownership rights over data including PII?** (Provide contract number and supporting information about PII/PHI from the contract). *(Refer to question 3.3.2 of the PTA)* This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

N/A

9.3 **Will the CSP collect any ancillary data and if so, who has ownership over the ancillary data?**

*Per NIST 800-144, cloud providers hold significant details about the accounts of cloud consumers that could be compromised and used in subsequent attacks. Ancillary data also involves information the cloud provider collects or produces about customer-related activity in the cloud. It includes data collected to meter and charge for consumption of resources, logs and audit trails, and other such metadata that is generated and accumulated within the cloud environment.*

*This question is related to privacy control DI-1, Data Quality.*

No

9.4 **NIST 800-144 states, “Organizations are ultimately accountable for the security and privacy of data held by a cloud provider on their behalf.” Is this principle described in contracts with customers? Why or why not?**

*What are the roles and responsibilities involved between the organization and cloud provider, particularly with respect to managing risks and ensuring organizational requirements are met? This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.*

N/A

9.5 **If the system is utilizing Robotics Process Automation (RPA), please describe the role of the bots.**

*Robotic Process Automation is the use of software scripts to perform tasks as an automated process that executes in parallel with or in place of human input. For example, will the automation move or touch PII/PHI information. RPA may also be referred to as “Bots” or Artificial Intelligence (AI).*

N/A
