Abstract

The abstract provides the simplest explanation for “what does the system do?”.

Used to support the analysis/audits of the VBA automated disability compensation benefits claims. The tool is used by VA staff to capture claim information during secondary reviews.

Overview

The overview is the most important section of the PIA. A thorough and clear overview gives the reader the appropriate context to understand the responses in the PIA. The overview should contain the following elements:

1 General Description
   A. What is the IT system name and the name of the program office that owns the IT system?
      Salesforce - Automation Validation Review Tool (SF-AVRT) is owned by the Office of Automation Benefits Delivery (OABD). The Salesforce platform is owned by Office of Information Technology (OIT) as it is a Software as a Service (SaaS) system.
   
      B. What is the business purpose of the program, IT system, or technology and how it relates to the program office and agency mission?
      SF-AVRT supports quality analysis/audits on Veteran disability claims that have been processed using tools developed by OABD that automate the delivery of disability compensation benefits.
      The purpose of the information created is to associate audit results to determine the consistency of automation decision support (ADS) tools in the processing of benefit claims.
      The VA Veterans Benefits Administration (VBA) Office of Automation Benefits Delivery (ABD) has developed several major programs aimed at automating disability compensation benefits delivery, the SF-AVRT tool is complimentary to its portfolio.
     
   C. Who is the owner or control of the IT system or project?
      Salesforce Government Cloud Plus (SFGCP) is a cloud platform. Data in the platform is controlled by VA but non-VA owned and operated.
      The SF-AVRT is owned by the VA Veterans Benefits Administration (VBA) Office of Automation Benefits Delivery (ABD).

2. Information Collection and Sharing
   D. What is the expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual?
      Information for approximately 500,000 Veterans is expected to be stored. The information results from initial assessments. This may increase over time as review needs expand.
E. What is a general description of the information in the IT system and the purpose for collecting this information?

SF-AVRT will be utilized by the VBA OABD to support quality analysis/audits on Veteran disability claims that have been processed using tools developed by OABD that automate the delivery of disability compensation benefits. One such tool is the ABD system.

The SF-AVRT module will include an engagement form containing claimant information that is used for multiple levels of review performed by VA employees and contractors. The personally identifiable information included could include the Veteran’s name, diagnostic code, and condition name. Additional information can include employee and contractor names and business emails.

A key feature in SF-AVRT is the ability for designated Quality Control Team managers to create new or modify existing assessment checklists without the need of a full development engagement. The tool will provide employee performance metrics with automated and increased reporting and dashboards for leadership review and decision making.

F. What information sharing conducted by the IT system? A general description of the modules and subsystems, where relevant, and their functions.

SF-AVRT does not share information with other sources.

G. Is the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites?

SF-AVRT is not operated at multiple sites. The system is hosted on Salesforce Government Cloud servers in located on VA owned Salesforce’s servers in Herndon, VA and Chicago, IL.

3. Legal Authority and SORN

H. What is the citation of the legal authority to operate the IT system?

The Privacy Act is the legal authority to utilize this information. The Privacy Act of 1974, set forth at 5 U.S.C. 552a, states the legal authority to utilize this information. As per the SORN, The U.S. government is authorized to ask for this information under Executive Orders 9397, 10450, 10865, 12333, and 12356; sections 3301 and 9101 of title 5, U.S. Code; sections 2165 and 2201 of title 42, U.S. Code; sections 781 to 887 of title 50, U.S. Code; parts 5, 732, and 736 of title 5, Code of Federal Regulations; and Homeland Security Presidential Directive 12.

The SORN for this system is Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records-VA 58VA21/22/28 / 86 FR 61858 (https://www.govinfo.gov/content/pkg/FR-2021-11-08/pdf/2021-24372.pdf) provides the authority for maintenance of the system under, Title 10 U.S.C. chapters 106a, 510, 1606 and 1607 and title 38, U.S.C. §501(a) and Chapters 3, 11, 13, 15, 18, 19, 21, 23, 30, 31, 32, 33, 34, 35, 36, 37, 39, 51, 53, 55 and 77. Title 5 U.S.C. 5514
I. If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval? If the system is using cloud technology, does the SORN for the system cover cloud usage or storage?

The SORN does not require amendment or revision. SF-AVRT uses cloud technology and the SORN covers cloud usage and storage: Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records-VA 58VA21/22/28 / 86 FR 61858 (https://www.govinfo.gov/content/pkg/FR-2021-11-08/pdf/2021-24372.pdf)

4. System Changes

J. Will the completion of this PIA will result in circumstances that require changes to business processes?

No business processes will be changed as a result of the completion of this PIA. SF-AVRT is a new tool that will be used to replace manually documented audit results and reports.

K. Will the completion of this PIA could potentially result in technology changes?

No, there will not be any technology changes.

Section 1. Characterization of the Information

The following questions are intended to define the scope of the information requested and collected as well as the reasons for its collection as part of the program, IT system, or technology being developed.

1.1 What information is collected, used, disseminated, created, or maintained in the system?

Identify and list all Sensitive Personal Information (SPI) that is collected and stored in the system, including Individually Identifiable Information (III), Individually Identifiable Health Information (IIHI), Protected Health Information (PHI), and Privacy-Protected Information. For additional information on these information types and definitions, please see VA Directives and Handbooks in the 6500 series (https://vaww.va.gov/vapubs/). If the system creates information (for example, a score, analysis, or report), list the information the system is responsible for creating.

If a requesting system receives information from another system, such as a response to a background check, describe what information is returned to the requesting system.
This question is related to privacy control AP-1, Authority To Collect, and AP-2, Purpose Specification.

The information selected below must match the information provided in question 2.1 as well as the data elements columns in 4.1 and 5.1. It must also match the information provided in question 3.4 of the PTA.

Please check any information listed below that your system collects, uses, disseminates, creates, or maintains. If additional SPI is collected, used, disseminated, created, or maintained, please list those in the text box below:

- [ ] Name
- [ ] Social Security Number
- [ ] Date of Birth
- [ ] Mother’s Maiden Name
- [ ] Personal Mailing Address
Other PII/PHI data elements: Diagnostic Code, Condition Name, Employee Name, Employee Business Email, Contractor Name, Contractor Business Email

**PII Mapping of Components (Servers/Database)**

There is no information source because the Salesforce SF-AVRT is the primary source. Information is entered when the automated benefits process is audited.

Salesforce SF-AVRT has no (zero) key components (servers/databases). The area does not map to any components; therefore, no component PII is collected.

Note: Due to the PIA being a public facing document, please do not include server names in the table. The first table of 3.9 in the PTA should be used to answer this question.

**Internal Components Table**

<table>
<thead>
<tr>
<th>Component Name (Database, Instances, Application, Software, Application Program Interface (API) etc.) that contains PII/PHI</th>
<th>Does this system collect PII? (Yes/No)</th>
<th>Does this system store PII? (Yes/No)</th>
<th>Type of PII (SSN, DOB, etc.)</th>
<th>Reason for Collection/Storage of PII</th>
<th>Safeguards</th>
</tr>
</thead>
<tbody>
<tr>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

1.2 What are the sources of the information in the system?
These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.2a List the individual, entity, or entities providing the specific information identified above. For example, is the information collected directly from the individual as part of an application for a benefit, or is it collected from other sources such as commercial data aggregators?

---

1 *Specify type of Certificate or License Number (e.g., Occupational, Education, Medical)
Salesforce SF-AVRT information is created by VA the Office of Automation Benefits Delivery (OABD) team while performing audits on ADS tools. The audit is an assessment of the automated tool used to process the disability benefits claim.

1.2b Describe why information from sources other than the individual is required? For example, if a program’s system is using data from a commercial aggregator of information or data taken from public Web sites, state the fact that this is where the information is coming from and then in question indicate why the system is using this source of data.

Information from sources other than the individual is not required.

1.2c Does the system create information (for example, a score, analysis, or report), list the system as a source of information?

SF-AVRT combines audit results/information in the form of reports and dashboards.

1.3 How is the information collected?

These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.3a This question is directed at the means of collection from the sources listed in question 1.2. Information may be collected directly from an individual, received via electronic transmission from another system, or created by the system itself. Specifically, is information collected through technologies or other technologies used in the storage or transmission of information in identifiable form?

SF-AVRT information is manually created in the tool by quality auditors. The information being audited is stored in other systems (e.g., VBMS and CAPRI). Data/Information from these systems is not housed in AVRT.

1.3b If the information is collected on a form and is subject to the Paperwork Reduction Act, what is the form’s OMB control number and the agency form number?

This is not applicable. Information is not collected on a form.

1.4 How will the information be checked for accuracy? How often will it be checked?

These questions are related to privacy controls DI-1, Data Quality, and DI-2, Data Integrity and Integrity Board.

1.4a Discuss whether and how often information stored in the system is checked for accuracy. Is information in the system checked against any other source of information (within or outside your organization) before the information is used to make decisions about an individual? For example, is there a computer matching agreement in place with another government agency? For systems that receive data from internal data sources or VA IT systems, describe the system checks to ensure that data corruption has not occurred during transmission.

SF-AVRT data is an output of OABD and information validation & verification (IV&V) activities (analysis and auditing); hence, the data is a reporting of information accuracy. Therefore, there is no need to verify the analysis of data that has been analyzed.
1.4b Does the system check for accuracy by accessing a commercial aggregator of information, describe this process and the levels of accuracy required by the contract?

No, SF-AVRT does not access a commercial aggregator.

1.5 What specific legal authorities, arrangements, and agreements defined the collection of information?

List the full legal authority for operating the system, specifically the authority to collect the information listed in question 1.1. Provide the authorities in a manner understandable to any potential reader, i.e., do not simply provide a legal citation; use statute names or regulations in addition to citations. Legal authorities include Federal laws, regulations, statutes, and Executive Orders. This question is related to privacy control AP-1, Authority to Collect

1.6 PRIVACY IMPACT ASSESSMENT: Characterization of the information

Consider the specific data elements collected and discuss the potential privacy risks and what steps, if any are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete this section)

Consider the following Fair Information Practice Principles (FIPPs) when assessing the risk to individual privacy:

Principle of Purpose Specification: Explain how the collection ties with the purpose of the underlying mission of the organization and its enabling authority.

Principle of Minimization: Is the information directly relevant and necessary to accomplish the specific purposes of the program?

Principle of Individual Participation: Does the program, to the extent possible and practical, collect information directly from the individual?

Principle of Data Quality and Integrity: Are there policies and procedures for VA to ensure that personally identifiable information is accurate, complete, and current?
This question is related to privacy control AR-1, Governance and Privacy Program, and AR-2, Privacy Impact and Risk Assessment.

Follow the format below when entering your risk assessment:

Privacy Risk: Due to the sensitive nature of the data, there is a risk that if the data were accessed by an unauthorized individual or otherwise breached; personal, professional, or financial harm may result for the individuals affected.
Veteran name, benefit claim ID (BCID), diagnostic code, and condition name is included in the ABD assessment forms. SF-AVRT data is centered on validation of correctness (of ABD forms) for benefits awards to Veterans and Dependents which is a Moderate risk.

**Mitigation:** Data is encrypted by Salesforce Shield Platform which provides FIPS 140-2 certified encryption. Additionally, all data and content stored in Salesforce Government Cloud Plus (SFGCP) is encrypted.

Additionally, it would take a considerable amount of time for an individual to identify an individual using the diagnostic code and name.

### Section 2. Uses of the Information

The following questions are intended to clearly delineate the use of information and the accuracy of the data being used.

**2.1 Describe how the information in the system that will be used in support of the program’s business purpose.**

*Identify and list each use (both internal and external to VA) of the information collected or maintained. This question is related to privacy control AP-2, Purpose Specification.*

<table>
<thead>
<tr>
<th>PII/PHI Data Element</th>
<th>Internal Use</th>
<th>External Use</th>

</table>

**2.2 What types of tools are used to analyze data and what type of data may be produced?**

*These questions are related to privacy controls DI-1, Data Quality, DI-2, Data Integrity and Integrity Board, and SE-1, Inventory of Personally Identifiable Information.*

2.2a Many systems sift through large amounts of information in response to a user inquiry or programmed functions. Systems may help identify areas that were previously not obvious and need additional research by agents, analysts, or other employees. Some systems perform complex analytical tasks resulting in, among other types of data, matching, relational analysis, scoring,
reporting, or pattern analysis. Describe any type of analysis the system conducts and the data that is created from the analysis?

Auditors perform the analysis and document their findings in SF-AVRT. The data produced are findings from quality personnel’s manual review. AVRT will conduct calculations to aggregate audit scores and auditor performance metrics. This data is for internal use only and is used for reporting to VA leadership.

2.2b If the system creates or makes available new or previously unutilized information about an individual, explain what will be done with the newly derived information. Will it be placed in the individual’s existing record? Will a new record be created? Will any action be taken against or for the individual identified because of the newly derived data? If a new record is created, will the newly created information be accessible to Government employees who make determinations about the individual? If so, explain fully under which circumstances and by whom that information will be used.

The SF-AVRT system will not create or make available new or previously unutilized information about an individual.

2.3 How is the information in the system secured?
These questions are related to security and privacy controls SC-9, Transmission Confidentiality, and SC-28, Protection of Information at Rest.

2.3a What measures are in place to protect data in transit and at rest?
SF-AVRT is accessed via a secured webpage utilizing Single Sign-On (SSO) technology. SF-AVRT is housed in a vendor-owned AWS GovCloud, which is FedRAMP-certified and has security controls in place for safeguarding the data stored there. The data exchange will be through a site-to-site encryption having Transmission Layer Security. Salesforce Shield Product provides FIPS 140-2 certified encryption.

2.3b If the system is collecting, processing, or retaining Social Security Numbers, are there additional protections in place to protect SSNs?

The system is not collecting, processing, or retaining Social Security Numbers.

2.3c How is PII PHI safeguarded in accordance with OMB Memorandum M-06-15?
Salesforce Shield Platform provides FIPS 140-2 certified encryption. Additionally, all data and content stored in Salesforce Government Cloud Plus (SFGCP) is encrypted. SF-AVRT is accessed via a secured webpage utilizing SSO technology. SF-AVRT is implemented with the required security and privacy controls for Federal information systems and organizations according to NIST SP 800-53 and VA Handbook 6500, Risk Management Framework for VA Information Systems. Employees such as analysts who are completing reviews have each undergone extensive background checks and has taken the required annual privacy training, as well as signed off on Rules of Behavior document.

2.4 PRIVACY IMPACT ASSESSMENT: Use of the information.
Describe any types of controls that may be in place to ensure that information is handled in accordance with the uses described above. Example: Describe if training for users of the project
covers how to appropriately use information. Describe the disciplinary programs or system controls (i.e. denial of access) that are in place if an individual is inappropriately using the information.

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Is the PIA and SORN, if applicable, clear about the uses of the information?

**Principle of Use Limitation:** Is the use of information contained in the system relevant to the mission of the project?

This question is related to privacy control AR-4, Privacy Monitoring and Auditing, AR-5, Privacy Awareness and Training, and SE-2, Privacy Incident response.

2.4a How is access to the PII determined?

Access will be controlled by the Quality Chief and individuals will access the system using SSO. Access to PII is limited to VA users of the AVRT system, authenticated through SSO, who are working as auditors of AVRT records. Additionally, the SORN defines the use of the information and how the information is accessed, contained, and stored in the system.

2.4b Are criteria, procedures, controls, and responsibilities regarding access documented?

SF-AVRT is accessed via a secured webpage utilizing SSO technology. SF-AVRT is housed in a vendor-owned AWS GovCloud, which is FedRAMP-certified and has security controls in place for safeguarding the data stored there. The data exchange will be through a site-to-site encryption having Transmission Layer Security. Salesforce Shield Product provides FIPS 140-2 certified encryption.

A change management plan will outline the process for users to gain access to the system.

2.4c Does access require manager approval?

Yes, Lead Administrator approval is required for new users accessing the SF-AVRT tool.

2.4d Is access to the PII being monitored, tracked, or recorded?

Profile-based setting available in Salesforce is leveraged for users access in application. User have limited access to PII information captured in the tool and access is monitored using logging details available through Salesforce cloud technology.

2.4e Who is responsible for assuring safeguards for the PII?

SF-AVRT is accessed via a secured webpage utilizing SSO technology. SF-AVRT is housed in a vendor-owned AWS GovCloud, which is FedRAMP-certified and has security controls in place for safeguarding the data stored there. Accessibility to data is granted based on the permission sets and profile-based settings is applied based on FedRAMP Salesforce Gov Cloud Plus platform. Account creation is managed and offered through VA via two factor authentication (2FA) Personal Identity Verification (PIV) card and/or Access VA. Single Sign-On external (SSOe) is used to provide credential access to VA modules/communities residing in the Salesforce application, the determinant of access is organizational affiliation rather than personal identity. For some module(s) the required organizational e-mail confirmation and multi-factor authentication (MFA) will be enforced (IAL1), but no identity proofing (IAL2) and vice
versa. The managers will reject any applications from individuals who do not work with them, do not require access, or are not using the correct e-mail address.

Additionally, The SF-AVRT Privacy Officer, Information System Security Officer, and Information System Owner will be responsible for maintaining all safeguards are put in place to protect PII and other sensitive information.

Section 3. Retention of Information

The following questions are intended to outline how long information will be retained after the initial collection.

3.1 What information is retained?

*Identify and list all information collected from question 1.1 that is retained by the system. This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal*

SF-AVRT collects the following information, which is manually uploaded to the system from a flat file (e.g., Excel)

- Veteran Name
- Diagnostic Code
- Condition Name
- Employee Name
- Employee Business Email
- Contractor Name
- Contractor Business Email

3.2 How long is information retained?

*In some cases, VA may choose to retain files in active status and archive them after a certain period of time. State active file retention periods, as well as archived records, in number of years, for the information and record types. For example, financial data held within your system may have a different retention period than medical records or education records held within your system, please be sure to list each of these retention periods. The VA records officer should be consulted early in the development process to ensure that appropriate retention and destruction schedules are implemented. If the system is using cloud technology, will it be following the NARA approved retention length and schedule? This question is related to privacy control DM-2, Data Retention and Disposal.*

Records management within the Department of Veterans Affairs is governed by VA Directive 6300, Records and Information Management with specific records management procedures documented in VA Handbook 6300.1. The information is retained following the policies and schedules of VA’s Records management Service and NARA in “Department of Veterans Affairs Records Control Schedule 10-1”. Record Control Schedule 10-1 can be found at the following link: https://www.va.gov/vhapublications/RCS10/rcs10-1.pdf.
The SORN provides the retention time for the system: Records Control Schedule VB–1, Part 1 Section XIII, Item 13–052.100 as authorized by NARA.

3.3 Has the retention schedule been approved by the VA records office and the National Archives and Records Administration (NARA)?

An approved records schedule must be obtained for any IT system that allows the retrieval of a record via a personal identifier. The VA records officer will assist in providing a proposed schedule. The schedule must be formally offered to NARA for official approval. Once NARA approves the proposed schedule, the VA records officer will notify the system owner. Please work with the system Privacy Officer and VA Records Officer to answer these questions.

This question is related to privacy control DM-2, Data Retention and Disposal.

3.3a Are all records stored within the system of record indicated on an approved disposition authority?

The retention schedule for SFGCP also applies to SF-AVRT.

SF-AVRT complies with all VA retention and disposal procedures specified in VA Handbook 6300 and VA Directive 6300. Records contained in the SF-AVRT instance will be retained as long as the information is needed in accordance with the specific retention periods located in the VB-1 document at https://www.benefits.va.gov/WARMS/21guides.asp and the Retention Control Schedule (RCS 10-1) document at https://www.va.gov/vhapublications/RCS10/rcs10-1.pdf

3.3b Please indicate each records retention schedule, series, and disposition authority?

Records will be maintained and disposed of in accordance with VA Directive 6300. VA will use NARA regulations mentioned as follows:

- VB-1 Part 1
  - Item # 13-052.100, Title - Duplicate Material, Disposition - destroy after determining that the official record copy or original is in file.

- RCS 10-1
  - Item # 1180.17, Title - Veteran Benefits, Disposition - N1-15-06-2, item 18 (Instructions: PERMANENT. Cutoff after receipt of last relevant correspondence. Transfer to NARA 50 years after cutoff.)

3.4 What are the procedures for the elimination or transfer of SPI?

Explain how records are destroyed, eliminated or transferred to NARA at the end of their mandatory retention period. Please give the details of the process. For example, are paper records shredded on site, or by a shredding company and accompanied by a certificate of destruction, etc.? This question is related to privacy control DM-2, Data Retention and Disposal.

The SF-AVRT tool adheres to the VA RC Schedule 10-1. All electronic storage media used to store, process, or access records will be disposed of in adherence with the VA Directive 6500. (https://www.va.gov/vapubs/search_action.cfm?dType=1).

3.5 Does the system, where feasible, use techniques to minimize the risk to privacy by using PII for research, testing, or training?
Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. These uses of PII increase the risks associated with the unauthorized disclosure or misuse of the information. Please explain what controls have been implemented to protect PII used for testing, training and research. This question is related to privacy control DM-3, Minimization of PII Used in Testing, Training and Research.

SF-AVRT does not use Veteran’s PII information for research, testing or training. SF-AVRT only uses test data (no real PII) for testing the system. VA Handbook 6500 mandates that systems under development should not process “live data” or do any real processing in which true business decisions will be based. Test data that is de-identified should be used to test systems and develop systems that have not yet undergone security A&A. Furthermore, systems that are in development (pilot, proof-of-concept, or prototype) should not be attached to VA networks without first being assessed and authorized. Additionally, VA wide Directive 6511 describes the responsibilities, requirements, and procedures for eliminating PII or information exempt from release under FOIA from presentations that may be seen by non-VA parties. This directive includes guidance for conducting privacy reviews of presentations, and the criteria for when presenters must self-certify that their presentations are devoid of PII or information exempt from release under FOIA.

3.6 PRIVACY IMPACT ASSESSMENT: Retention of information

Discuss the risks associated with the length of time data is retained and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

While we understand that establishing retention periods for records is a formal process, there are policy considerations behind how long a project keeps information. The longer a project retains information, the longer it needs to secure the information and assure its accuracy and integrity. The proposed schedule should match the requirements of the Privacy Act to keep the minimum amount of PII for the minimum amount of time, while meeting the Federal Records Act. The schedule should align with the stated purpose and mission of the system.

Consider the following FIPPs below to assist in providing a response:

**Principle of Minimization:** Does the project retain only the information necessary for its purpose? Is the PII retained only for as long as necessary and relevant to fulfill the specified purposes?

**Principle of Data Quality and Integrity:** Has the PIA described policies and procedures for how PII that is no longer relevant and necessary is purged?

This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

Follow the format below:

**Privacy Risk:** Veteran claim information (Veteran name, diagnostic code, and diagnostic/condition name) is stored in SF-AVRT.
Mitigation: All data is stored within the secure SFGCP system, utilizing Salesforce Shield with advanced encryption capability.

Section 4. Internal Sharing/Receiving/Transmitting and Disclosure

The following questions are intended to define the scope of information sharing/receiving/transmitting within VA.

4.1 With which internal organizations is information shared/received/transmitted? What information is shared/received/transmitted, and for what purpose? How is the information transmitted?

NOTE: Question 3.9 (second table) on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any program offices, contractor-supported IT systems, and any other organization or IT system within VA with which information is shared.

State the purpose for the internal sharing. If you have specific authority to share the information, provide a citation to the authority.

For each interface with a system outside your program office, state what specific data elements (PII/PHI) are shared with the specific program office, contractor-supported IT system, and any other organization or IT system within VA.

Describe how the information is transmitted. For example, is the information transmitted electronically, by paper, or by some other means? Is the information shared in bulk, on a case-by-case basis, or does the sharing partner have direct access to the information?

This question is related to privacy controls AP-2, Purpose Specification, AR-3, Privacy Requirements for Contractors and Service Providers, AR-8, Accounting of Disclosures, TR-1, Privacy Notice, and UL-1, Internal Use.

Data Shared with Internal Organizations

<table>
<thead>
<tr>
<th>List the Program Office or IT System information is shared/received with</th>
<th>List the purpose of the information being shared/received with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program Office or IT system</th>
<th>Describe the method of transmittal</th>
</tr>
</thead>
<tbody>
<tr>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

4.2 PRIVACY IMPACT ASSESSMENT: Internal sharing and disclosure

Discuss the privacy risks associated with the sharing of information within the Department and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

This question is related to privacy control UL-1, Internal Use.
Follow the format below:

**Privacy Risk:** There is a risk that SF-AVRT data may be shared with unauthorized individual(s), or that authorized users may share it with other unauthorized individuals. The risk might include end users who do not log out of SF-AVRT when away from their computers.

**Mitigation:** The VA requires single sign-on (SSO) or two-factor authentication (2FA) in order to access SF-AVRT. The following security control families are applicable (in addition to all NIST applicable RMF families):
- Audit and Accountability
- Awareness Training
- Security Assessment and Authorization
- Incident Response Personnel Security
- Identification and Authentication

The tool will have a definable “time-out” setting which will automatically log the user out after a period of inactivity.

**Section 5. External Sharing/Receiving and Disclosure**

The following questions are intended to define the content, scope, and authority for information sharing external to VA, which includes Federal, State, and local governments, and the private sector.

5.1 With which external organizations (outside VA) is information shared/received? What information is shared/received, and for what purpose? How is the information transmitted and what measures are taken to ensure it is secure?

Is the sharing of information outside the agency compatible with the original collection? If so, is it covered by an appropriate routine use in a SORN? If not, please describe under what legal mechanism the IT system is allowed to share the information in identifiable form or personally identifiable information outside of VA.

**NOTE:** Question 3.10 on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any Federal, State, or local government agency or private sector organization with which information is shared.

For each interface with a system outside VA, state what specific data elements (PII/PHI) are shared with each specific partner.

What legal mechanisms, authoritative agreements, documentation, or policies are in place detailing the extent of the sharing and the duties of each party? For example, is the sharing of data compatible with your SORN? Then list the SORN and the applicable routine use from the SORN. Is there a Memorandum of Understanding (MOU), Computer Matching Agreement (CMA), or law that mandates the sharing of this information?
Describe how the information is transmitted to entities external to VA and what security measures have been taken to protect it during transmission.
This question is related to privacy control UL-2, Information Sharing with Third Parties

Data Shared with External Organizations

<table>
<thead>
<tr>
<th>List External Program Office or IT System information is shared/received with</th>
<th>List the purpose of information being shared / received / transmitted with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program or IT system</th>
<th>List the legal authority, binding agreement, SORN routine use, etc. that permit external sharing (can be more than one)</th>
<th>List the method of transmission and the measures in place to secure data</th>
</tr>
</thead>
<tbody>
<tr>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

5.2 PRIVACY IMPACT ASSESSMENT: External sharing and disclosure
Discuss the privacy risks associated with the sharing of information outside the Department and what steps, if any, are currently being taken to mitigate those identified risks.

If no External Sharing listed on the table above, (State there is no external sharing in both the risk and mitigation fields).

Discuss whether access controls have been implemented and whether audit logs are regularly reviewed to ensure appropriate sharing outside of the Department. For example, is there a Memorandum of Understanding (MOU), contract, or agreement in place with outside agencies or foreign governments.

Discuss how the sharing of information outside of the Department is compatible with the stated purpose and use of the original collection.

This question is related to privacy control AR-2, Privacy Impact and Risk Assessment, AR-3, Privacy Requirements for Contractors and Service Providers, and AR-4, Privacy Monitoring and Auditing

Follow the format below:

**Privacy Risk:** SF-AVRT does not share or disclose information externally; therefore, there is no privacy risk.

**Mitigation:** N/A
Section 6. Notice

The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information.

6.1 Was notice provided to the individual before collection of the information? If yes, please provide a copy of the notice as an Appendix-A 6.1 on the last page of the document. Also provide notice given to individuals by the source system (A notice may include a posted privacy policy, a Privacy Act notice on forms, or a system of records notice published in the Federal Register.) If notice was not provided, why not?

These questions are related to privacy control TR-1, Privacy Notice, and TR-2, System of Records Notices and Privacy Act Statements, and TR-3, Dissemination of Privacy Program Information.

6.1a This question is directed at the notice provided before collection of the information. This refers to whether the person is aware that his or her information is going to be collected. A notice may include a posted privacy policy, a Privacy Act statement on forms, or a SORN published in the Federal Register, Notice of Privacy Practice provided to individuals for VHA systems. If notice was provided in the Federal Register, provide the citation.

Notice of information collection is provided in several additional ways. The initial method of notification is in person during individual interviews or in writing via the Privacy Act statement on forms and applications completed by the individual. The Privacy Act Statement is also displayed on all VBA public facing sites. Additionally, the Department of Veterans Affairs also provides notice by publishing the following VA System of Record Notices (VA SORN) in the Federal Register and online.

Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records-VA, SOR 58VA21/22/28

The following Written notice is on all VA forms: PRIVACY ACT INFORMATION: No allowance of compensation or pension may be granted unless this form is completed fully as required by law (38 U.S.C. 5101). The responses you submit are considered confidential (38 U.S.C. 5701). VA may disclose the information that you provide, including Social Security numbers, outside VA if the disclosure is authorized under the Privacy Act, including the routine uses identified in the VA system of records, 58VA21/22 Compensation, Pension, Education, and Rehabilitation Records - VA. The requested information is considered relevant and necessary to determine maximum benefits under the law. Information submitted is subject to verification through computer matching.

Employees and contractors are required to review, sign, and abide by the National Rules of Behavior on an annual basis.

6.1b If notice was not provided, explain why. If it was provided, attach a copy of the current notice.

All VA claims forms include the Privacy Act Notice. Here are two examples:

1. Application for Disability Compensation and Related Compensation Benefits VA Form 21-526
2. Supplemental Claim VA Form 20-0995.

6.1c Describe how the notice provided for the collection of information is adequate to inform those affected by the system that their information has been collected and is being used appropriately. Provide information on any notice provided on forms or on Web sites associated with the collection.
The notice provided for the collection of information is adequate to inform those affected that their information has been collected as all VA Forms used to initiate a claim for VBA benefits includes a Privacy Act Notice that details how their information will be used, if/how that information will be disclosed, and for what purposes. The claimant must sign the form in order to provide consent their consent to VA’s use of this information.

6.2 Do individuals have the opportunity and right to decline to provide information? If so, is a penalty or denial of service attached?

This question is directed at whether the person from or about whom information is collected can decline to provide the information and if so, whether a penalty or denial of service is attached. This question is related to privacy control IP-1, Consent, IP-2, Individual Access, and IP-3, Redress.

VBA only requests information necessary to administer benefits to Veterans and other potential beneficiaries. While an individual may choose not to provide information, this may prevent them from obtaining the benefits necessary to them.

Employees and VA contractors are also required to provide the requested information to maintain employment or their contract.

Responding to collection is voluntary however, if information is not provided, then benefits may be denied.

6.3 Do individuals have the right to consent to particular uses of the information? If so, how does the individual exercise the right?

This question is directed at whether an individual may provide consent for specific uses, or the consent is given to cover all uses (current or potential) of his or her information. If specific consent is required, how would the individual consent to each use? This question is related to privacy control IP-1, Consent.

Once information is provided to VBA, the records are used, as necessary, to ensure the administration of statutory benefits to all eligible Veterans, Service members, reservists, and their spouses, surviving spouses and dependents. As such, individuals are not provided with the direct opportunity to consent to uses of information. However, if an individual wishes to remove consent for a particular use of their information, they should contact the nearest VA regional office, a list of which can be found on the VBA website.

6.4 PRIVACY IMPACT ASSESSMENT: Notice

Describe the potential risks associated with potentially insufficient notice and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Has sufficient notice been provided to the individual?

**Principle of Use Limitation:** Is the information used only for the purpose for which notice was provided either directly to the individual or through a public notice? What procedures are in place to ensure that information is used only for the purpose articulated in the notice?
This question is related to privacy control TR-1, Privacy Notice, AR-2, Privacy Impact and Risk Assessment, and UL-1, Internal Use.

Follow the format below:

**Privacy Risk:** There is a risk that veterans and other members of the public will not know that the VBA system exists or that it collects, maintains, and/or disseminates PII, PHI or PII/PHI about them.

**Mitigation:** This risk is mitigated by the common practice of providing the Notice of Privacy Practice (NOPP) when Veterans are enrolled for health care. Employees and contractors are required to review, sign, and abide by the National Rules of Behavior on a yearly basis as required by VA Handbook 6500 as well as complete annual mandatory Information Security and Privacy Awareness training. Additional mitigation is provided by making the System of Record Notices (SORN) and Privacy Impact Assessment (PIA) available for review online, as discussed in question 6.1 and the Overview section of this PIA.

### Section 7. Access, Redress, and Correction

The following questions are directed at an individual’s ability to ensure the accuracy of the information collected about him or her.

#### 7.1 What are the procedures that allow individuals to gain access to their information?

These questions are related to privacy control IP-2, Individual Access, and AR-8, Accounting of Disclosures.

7.1a Cite any procedures or regulations your program has in place that allow access to information. These procedures, at a minimum, should include the agency’s FOIA/Privacy Act practices, but may also include additional access provisions. For example, if your program has a customer satisfaction unit, that information, along with phone and email contact information, should be listed in this section in addition to the agency’s procedures. See 5 CFR 294 and the VA FOIA Web page at [http://www.foia.va.gov/](http://www.foia.va.gov/) to obtain information about FOIA points of contact and information about agency FOIA processes.

Individuals’ information in SF-AVRT is limited. SF-AVRT stores the audit results from the VA Automated Benefits Delivery (ABD) claims process. Any requests for information relating to SF-AVRT audit results would be obtained using a FOIA request.

- Veterans and authorized parties have a statutory right to request a copy of or an amendment to a record in VA’s possession at any time under the Freedom of Information Act (FOIA) and the privacy Act (PA). VA has a decentralized system for fulfilling FOIA and PA requests. The type of information or records an individual is seeking will determine the location to which a request should be submitted. For records contained within a VA claims folder (Compensation and Pension claims), or military service medical records in VA’s possession, the request will be fulfilled by the VA Records Management Center. Authorized requestors should mail their Privacy Act or FOIA requests to: Department of Veterans Affairs, Claims Intake Center, P.O. Box 4444, Janesville, WI 53547–4444, DID: 608–373–6690.
• For other benefits records maintained by VA (to include Vocational Rehabilitation & Employment, Insurance, Loan Guaranty or Education Service) submit requests to the FOIA/Privacy Act Officer at the VA Regional Office serving the individual’s jurisdiction. Address locations for the nearest VA Regional Office are listed at VA Locations Link.

• Any individuals who have questions about access to records may also call 1-800-327-1000. Information about how to contact Fiduciary services can be found here: https://www.benefits.va.gov/FIDUCIARY/contact-us.asp

7.1b If the system is exempt from the access provisions of the Privacy Act, please explain the basis for the exemption or cite the source where this explanation may be found, for example, a Final Rule published in the Code of Federal Regulations (CFR)?

This system is not exempt from the Privacy Act.

7.1c If the system is not a Privacy Act system, please explain what procedures and regulations are in place that covers an individual gaining access to his or her information?

SF-AVRT is a Privacy Act system.

7.2 What are the procedures for correcting inaccurate or erroneous information?

Describe the procedures and provide contact information for the appropriate person to whom such issues should be addressed? If the correction procedures are the same as those given in question 7.1, state as much. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

SF-AVRT is used to audit ABD automation programs for quality assessments. Therefore, any inaccurate or erroneous claim information will have to be updated in the source system(s) that supply ABD.

7.3 How are individuals notified of the procedures for correcting their information?

How are individuals made aware of the procedures for correcting his or her information? This may be through notice at collection or other similar means. This question is meant to address the risk that even if procedures exist to correct information, if an individual is not made fully aware of the existence of those procedures, then the benefits of the procedures are significantly weakened. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

The information stored in SF-AVRT are audit results that will be corrected by the auditors with access to SF-AVRT. Information about individuals may be documented on audit checklists. Information about individuals will continue to be maintained in the source systems (e.g., VBMS, CAPRI) and the correction procedures should be followed for each respective source system.

7.4 If no formal redress is provided, what alternatives are available to the individual?
Redress is the process by which an individual gains access to his or her records and seeks corrections or amendments to those records. Redress may be provided through the Privacy Act and Freedom of Information Act (FOIA), and also by other processes specific to a program, system, or group of systems. **Example: Some projects allow users to directly access and correct/update their information online. This helps ensure data accuracy.**

This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

Information can be supplied through FOIA and Privacy Act as described above in 7.1.

### 7.5 PRIVACY IMPACT ASSESSMENT: Access, redress, and correction

Discuss what risks there currently are related to the Department’s access, redress, and correction policies and procedures for this system and what, if any, steps have been taken to mitigate those risks. **For example, if a project does not allow individual access, the risk of inaccurate data needs to be discussed in light of the purpose of the project. For example, providing access to ongoing law enforcement activities could negatively impact the program’s effectiveness because the individuals involved might change their behavior.** (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

**Principle of Individual Participation:** Is the individual provided with the ability to find out whether a project maintains a record relating to him?

**Principle of Individual Participation:** If access and/or correction is denied, then is the individual provided notice as to why the denial was made and how to challenge such a denial?

**Principle of Individual Participation:** Is there a mechanism by which an individual is able to prevent information about him obtained for one purpose from being used for other purposes without his knowledge?

This question is related to privacy control IP-3, Redress.

Follow the format below:

**Privacy Risk:** There is a risk that individuals may seek to access or redress records in the SF-AVRT.

**Mitigation:** If applicable, erroneous information is self-corrected by VA employees. Otherwise, by publishing this PIA and the applicable SORN, the VA makes the public aware of the unique status of applications and evidence files. Furthermore, this document and the SORN provide the point of contact (POC) for members of the public who have questions or concerns about applications and evidence files. All access and redress issues are utilizing the same POC.

### Section 8. Technical Access and Security

The following questions are intended to describe technical safeguards and security measures.

8.1 **What procedures are in place to determine which users may access the system, and are they documented?**
These questions are related to privacy control AR-7, Privacy-Enhanced System Design and Development.

8.1a Describe the process by which an individual receives access to the system?

All VA employees and contractors require Lead Administrator approval to access SF-AVRT. Users will access SF-AVRT using single sign-on (SSO) utilizing a PIV card.

8.1b Identify users from other agencies who may have access to the system and under what roles these individuals have access to the system. Who establishes the criteria for what PII can be shared?

This does not apply to SF-AVRT because it is not for external use by other agencies.

8.1c Describe the different roles in general terms that have been created to provide access to the system? For example, certain users may have "read-only" access while others may be permitted to make certain amendments or changes to the information.

Users are categorized as:

- Auditors: Conduct reviews to assess the quality of ADS tools and actions taken by automation functionality.
- Supervisors: Use performance data for all review levels to evaluate and document employee production and quality.
- Data Specialists: This role provides audit sample data for both OBA and IV&V reviews as well as runs regular and ad hoc reports.
- Read-Only: Assigned to users who have a need and purpose as designated by the business to view the application.
- Administrators: Maintain user access, upload audit sample sets, maintain and update audit checklists, and provide system oversight.

8.2 Will VA contractor have access to the system and the PII? If yes, what involvement will contractors have with the design and maintenance of the system? Has a contractor confidentiality agreement, Business Associate Agreement (BAA), or a Non-Disclosure Agreement (NDA) been developed for contractors who work on the system?

If so, how frequently are contracts reviewed and by whom? Describe the necessity of the access provided to contractors to the system and whether clearance is required. If Privacy Roles and Responsibilities have been established to restrict certain users to different access levels, please describe the roles and associated access levels. Explain the need for VA contractors to have access to the PII. This question is related to privacy control AR-3, Privacy Requirements for Contractors, and Service Providers.

Yes, VA quality auditor contractors will have access to SF-AVRT. Contractors will also be involved in the design, development, and maintenance of the system. The Lead Administrator (Chief of Quality) will have constant oversite of contractors’ activities while utilizing AVRT. All contractors who will utilize AVRT have signed NDAs.

8.3 Describe what privacy training is provided to users either generally or specifically relevant to the program or system?
VA offers privacy and security training. Each program or system may offer training specific to the program or system that touches on information handling procedures and sensitivity of information. Please describe how individuals who have access to PII are trained to handle it appropriately. This question is related to privacy control AR-5, Privacy Awareness and Training.

General Training includes: VA Privacy Rules of Behavior, Privacy awareness training, HIPPA and VA on-boarding enterprise-wide training.

Users must read and acknowledge their receipt and acceptance of the VA National Rules of Behavior (ROB) or VA Contractor's ROB prior to gaining access to any VA information system or sensitive information. The rules are included as part of the security awareness training that all personnel must complete via VA’s Talent Management System 2.0 (TMS). After the user’s initial acceptance of the Rules, the user must re-affirm their acceptance annually as part of the privacy and security awareness training. Acceptance is obtained via electronic acknowledgment and is tracked through the TMS 2.0 system.

8.4 Has Authorization and Accreditation (A&A) been completed for the system?

8.4a If Yes, provide:

1. The Security Plan Status: Not Yet Approved
2. The System Security Plan Status Date: Not Yet assessed.
4. The Authorization Date: Not yet assessed.
5. The Authorization Termination Date: Not yet assessed.
6. The Risk Review Completion Date: Not yet assessed.
7. The FIPS 199 classification of the system (LOW/MODERATE/HIGH): Moderate

Please note that all systems containing SPI are categorized at a minimum level of “moderate” under Federal Information Processing Standards Publication 199.

8.4b If No or In Process, provide your Initial Operating Capability (IOC) date.

The Initial Operating Capability date for SF-AVRT is February 12, 2024.

Section 9 – Technology Usage

The following questions are used to identify the technologies being used by the IT system or project.

9.1 Does the system use cloud technology? If so, what cloud model is being utilized?

If so, Does the system have a FedRAMP provisional or agency authorization? If the system does use cloud technology, but does not have FedRAMP authorization, explain how the Cloud Service Provider (CSP) solution was assessed and what FedRAMP documents and processes were used for the assessment in order to comply with VA Handbook 6517. Types of cloud models include: Software as a Service (SaaS), Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Commercial off the Shelf (COTS), Desktop as a Service (DaaS), Mobile Backend as a Service (MBaaS), Information Technology Management as a Service (ITMaaS). This question is related to privacy control UL-1, Information Sharing with Third Parties.
Note: For systems utilizing the VA Enterprise Cloud (VAEC), no further responses are required after 9.1. (Refer to question 3.3.1 of the PTA)

Yes, SF-AVRT utilizes Salesforce Government Cloud Plus Platform. Salesforce Government Cloud Plus is hosted in the AWS GovCloud. The Salesforce Government Cloud Plus (SFGCP-E) is built on the underlying Salesforce.com platform that is hosted in a FedRAMP Certified FISMA High environment which is in the Amazon Web Services (AWS) GovCloud West. This software utilizes the PaaS Service of Salesforce Gov Cloud Plus.

9.2 Does the contract with the Cloud Service Provider, Contractors and VA customers establish who has ownership rights over data including PII? (Provide contract number and supporting information about PII/PHI from the contract). (Refer to question 3.3.2 of the PTA) This question is related to privacy control AR-3, Privacy Requirements for Contractors, and Service Providers.

Yes, VA has full ownership of the PII that will be used by the SF-AVRT module. Contract agreement “Salesforce Subscription Licenses, Maintenance and Support”, Contract Number: NNG15SD27B.

9.3 Will the CSP collect any ancillary data and if so, who has ownership over the ancillary data?

Per NIST 800-144, cloud providers hold significant details about the accounts of cloud consumers that could be compromised and used in subsequent attacks. Ancillary data also involves information the cloud provider collects or produces about customer-related activity in the cloud. It includes data collected to meter and charge for consumption of resources, logs and audit trails, and other such metadata that is generated and accumulated within the cloud environment.

This question is related to privacy control DI-1, Data Quality.

Ancillary data is not collected by Salesforce. VA has full ownership over the data stored in SF-AVRT.

9.4 NIST 800-144 states, “Organizations are ultimately accountable for the security and privacy of data held by a cloud provider on their behalf.” Is this principle described in contracts with customers? Why or why not?

What are the roles and responsibilities involved between the organization and cloud provider, particularly with respect to managing risks and ensuring organizational requirements are met? This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

VA has full authority over data stored in SF-AVRT.

9.5 If the system is utilizing Robotics Process Automation (RPA), please describe the role of the bots.

Robotic Process Automation is the use of software scripts to perform tasks as an automated process that executes in parallel with or in place of human input. For example, will the automation move or touch PII/PHI information. RPA may also be referred to as “Bots” or Artificial Intelligence (AI).

No robotic process automation (RPA) is used in this system.
