Version date: October 1, 2023
Page 1 of 37
Abstract

The abstract provides the simplest explanation for “what does the system do?”. HTH-MED Assessing (HT-MA).

The Veterans Affairs (VA) Home Telehealth Program is a national program sponsored by VHA Office of Connected Care/Telehealth Services, providing care management for Veterans with complex chronic conditions. This system is a collection of servers, each of which supports data sent from medical devices or other applications from patient homes transmitting electronic health information. This data is transmitted through a VA provided modem connection or Internet connection, using a vendor provided Internet Service Provider (ISP). Many of these devices automate the process, dialing in automatically to the centralized servers and transmitting data on a regular basis or connecting to a predetermined Uniform Resource Locator (URL). This HT-MA system utilizes a full suite of remote monitoring patient-facing platforms designed to collect patient biometrics and symptom data while educating patients in their own self-care.

Overview

The overview is the most important section of the PIA. A thorough and clear overview gives the reader the appropriate context to understand the responses in the PIA. The overview should contain the following elements:

1. General Description
   A. What is the IT system name and the name of the program office that owns the IT system?
      IT System Name: HTH-MED Assessing (HT-MA)
      Program Office: Office of Connected Care / Telehealth Services.

   B. What is the business purpose of the program, IT system, or technology and how it relates to the program office and agency mission?
      The HT-MA system is utilized by the VA to provide a home/remote telehealth monitoring program for Veterans. The system’s functions are, on a daily basis and in a secure manner, to remotely acquire specific Veteran health information. The information is then reviewed, categorized, prioritized, and presented to the VA Care Coordinator to monitor the health of a Veteran.

   C. Who is the owner or control of the IT system or project?
      VA Controlled / non-VA Owned and Operated

2. Information Collection and Sharing
   D. What is the expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual?
      Approximately 50,000 Veterans generally with comorbidities.

   E. What is a general description of the information in the IT system and the purpose for collecting this information?
      Personal Identifiable Information (PII) and Personnel Health Information (PHI) collected in order for VA Care Coordinators to monitor a Veteran’s health at home.
F. What information sharing conducted by the IT system? A general description of the modules and subsystems, where relevant, and their functions.
The HT-MA system acquires/maintains Veteran PHI and data through a Veteran’s completion of an electronic health status questionnaire via multiple proprietary modalities including Commander Flex (CD320/390), NetResponse Web, and TeleResponse. HT-MA also acquires/maintains Veteran and limited VA Care Coordinator PII data (for enrollment and patient management purposes) from the VA managed VistA and Oracle Health Cerner Electronic Health Record systems. HT-MA shares PII/PHI data with VA managed VistA and Oracle Health Cerner Electronic Health Record systems. See section 4.1 and 5.1 for more specific information.

G. Is the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites?
The information system resides within VA’s AITC/HITC. Continuity of Operations (COOPs) are performed on a quarterly basis to ensure business continuity.

3. Legal Authority and SORN

H. What is the citation of the legal authority to operate the IT system?
HT-MA has a FIPS 199 categorization of High, has the legal authority to operate under Title 38, United States Code, Sections 501(b) and 304, and collects information under VA SORN 24VA10A7 / 85 FR 62406 – Patient Medical Records –VA.

I. If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval? If the system is using cloud technology, does the SORN for the system cover cloud usage or storage?
The SORN does not require amendment or revision.

4. System Changes

J. Will the completion of this PIA will result in circumstances that require changes to business processes?
No.

K. Will the completion of this PIA could potentially result in technology changes?
No.

Section 1. Characterization of the Information

The following questions are intended to define the scope of the information requested and collected as well as the reasons for its collection as part of the program, IT system, or technology being developed.

1.1 What information is collected, used, disseminated, created, or maintained in the system?

Identify and list all Sensitive Personal Information (SPI) that is collected and stored in the system, including Individually Identifiable Information (III), Individually Identifiable Health Information (IIHI), Protected Health Information (PHI), and Privacy- Protected Information. For additional information on these information types and definitions, please see VA Directives and Handbooks in the 6500 series.
If the system creates information (for example, a score, analysis, or report), list the information the system is responsible for creating.

If a requesting system receives information from another system, such as a response to a background check, describe what information is returned to the requesting system. This question is related to privacy control AP-1, Authority To Collect, and AP-2, Purpose Specification.

The information selected below must match the information provided in question 2.1 as well as the data elements columns in 4.1 and 5.1. It must also match the information provided in question 3.4 of the PTA.

Please check any information listed below that your system collects, uses, disseminates, creates, or maintains. If additional SPI is collected, used, disseminated, created, or maintained, please list those in the text box below:

- Name
- Social Security Number
- Date of Birth
- Mother’s Maiden Name
- Personal Mailing Address
- Personal Phone Number(s)
- Personal Fax Number
- Personal Email Address
- Emergency Contact Information (Name, Phone Number, etc. of a different individual)
- Financial Information
- Health Insurance Beneficiary Numbers Account numbers
- Certificate/License numbers
- Vehicle License Plate Number
- Internet Protocol (IP) Address Numbers
- Medications
- Medical Records
- Race/Ethnicity
- Tax Identification Number
- Medical Record Number
- Gender
- Integrated Control Number (ICN)
- Military History/Service Connection
- Next of Kin
- Other Data Elements (list below)

Other PII/PHI data elements:

- All geographical subdivisions smaller than a State
  - Street address
  - City
  - Zip code
- All elements of dates
  - Admission date
  - Discharge date
  - Date of death
- Device identifiers and serial numbers
- Any other unique identifier:
  - Gender
  - Marital Status
  - Primary Language
  - Secondary Language
  - Occupation
  - Disability Status
  - Allergies
  - Data File Number (DFN)
  - Electronic Data Interchange Personal Identifier (EDIPI)
o Omnivisor Pro ID number
o Biometric Health data
  ▪ Blood pressure readings (systolic/diastolic)
  ▪ PulseOx Readings (blood oxygen)
  ▪ Heart Rate from both Blood Pressure and PulseOx
  ▪ Glucometer Readings (blood sugar)
  ▪ Weight Scale Readings
  ▪ Spirometer Readings (PEF/FEV1)
  ▪ Pedometer Readings (steps)
  ▪ Thermometer Readings (temperature)
  ▪ Medical Condition Question Responses
  ▪ Mood levels
  ▪ Pain levels

PII Mapping of Components (Servers/Database)

Home Telehealth - Medtronic Assessing consists of five key components (servers/databases/instances/applications/software/application programming interfaces (API)). Each component has been analyzed to determine if any elements of that component collect PII. The type of PII collected by Home Telehealth - Medtronic Assessing and the reasons for the collection of the PII are in the table below.

Note: Due to the PIA being a public facing document, please do not include server names in the table. The first table of 3.9 in the PTA should be used to answer this question.

Internal Components Table

<table>
<thead>
<tr>
<th>Component Name (Database, Instances, Application, Software, Application Program Interface (API) etc.) that contains PII/PHI</th>
<th>Does this system collect PII? (Yes/No)</th>
<th>Does this system store PII? (Yes/No)</th>

1.2 What are the sources of the information in the system?

These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.2a List the individual, entity, or entities providing the specific information identified above. For example, is the information collected directly from the individual as part of an application for a benefit, or is it collected from other sources such as commercial data aggregators?

Information received and maintained by the HT-MA system consists of identification and biometric data primarily gathered by electronic devices utilized by Veteran’s in their homes. The devices vary based on the type of medical condition being monitored. The sources of information are from a combination of devices and tools (i.e., pulse oximeter) which patients use to answer symptomatic questions (aka Disease Management Protocol or DMP) and generate biometric data readings to complete a health check (or status of health). The device and or tools read and record patient biometric data and is then transmitted to the Omnivisor Pro system which can be viewed by VA Client Care Coordinators. Two VA Care Coordinator data elements are also acquired and maintained. Additionally, the HT-MA system and the VA’s Electronic Health Records (EHR) system transmit specific Veteran’s data to one another as required.

1.2b Describe why information from sources other than the individual is required? For example, if a program’s system is using data from a commercial aggregator of information or data taken from public Web sites, state the fact that this is where the information is coming from and then in question indicate why the system is using this source of data.

Information is acquired from the VA Care Coordinator and the VA’s Electronic Health Records (EHR) for Veteran registration, identification, and monitoring.
1.2c Does the system create information (for example, a score, analysis, or report), list the system as a source of information?
The Omnivisor Pro system, per the data acquired from a Veteran, generates a value (and in some cases an alert) based on the parameters set by VA Care Coordinator.

1.3 How is the information collected?
These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.3a This question is directed at the means of collection from the sources listed in question 1.2. Information may be collected directly from an individual, received via electronic transmission from another system, or created by the system itself. Specifically, is information collected through technologies or other technologies used in the storage or transmission of information in identifiable form?
Information is primarily collected from both a Veteran via electronic devices, and in a very limited capacity, a VA Care Coordinator. To acquire Veteran health information, a Veteran, typically on a daily basis, answers/addresses a list of health questions (aka Disease Management Protocol or DMP) and vital signs by using one of three modalities noted below. Note-Communication methods include secure cellular, landline or Internet connection. 1-Commander Flex (CD320/390): A physical device, provided to patient, which connects with peripherals record vital type biometric data. 2-NetResponse Web; A web application. 3-TeleResponse: A telephone system whereby Veterans are able to use voice capabilities to record their biometric statistics. The Veteran health information data is securely transmitted through one of several methods including, cellular, landline, or a VA provided modem connection or internet connection. The information collected associated with a VA Care Coordinator is acquired as part of the Veteran enrollment process. Additionally, the HT-MA system and the VA’s Electronic Health Records (EHR) system transmit specific Veteran’s data to one another as required.

1.3b If the information is collected on a form and is subject to the Paperwork Reduction Act, what is the form’s OMB control number and the agency form number?
All information is collected electronically.

1.4 How will the information be checked for accuracy? How often will it be checked?
These questions are related to privacy controls DI-1, Data Quality, and DI-2, Data Integrity and Integrity Board.

1.4a Discuss whether and how often information stored in the system is checked for accuracy. Is information in the system checked against any other source of information (within or outside your organization) before the information is used to make decisions about an individual? For example, is there a computer matching agreement in place with another government agency? For systems that receive data from internal data sources or VA IT systems, describe the system checks to ensure that data corruption has not occurred during transmission.
Hashing algorithms and checksums are utilized when sending and verifying information integrity. The system verifies that data has been sent from an active device ID.

1.4b Does the system check for accuracy by accessing a commercial aggregator of information, describe this process and the levels of accuracy required by the contract?
HT-MA does not use a commercial aggregator of information.
1.5 What specific legal authorities, arrangements, and agreements defined the collection of information?

List the full legal authority for operating the system, specifically the authority to collect the information listed in question 1.1. Provide the authorities in a manner understandable to any potential reader, i.e., do not simply provide a legal citation; use statute names or regulations in addition to citations. Legal authorities include Federal laws, regulations, statutes, and Executive Orders. This question is related to privacy control AP-1, Authority to Collect.

HT-MA operates under the legal authority of Title 38, United States Code, Section 501(b) and 304 and collects information under the System of Record of VA SORN 24VA10A7 / 85 FR 62406 - Patient Medical Records - VA.

1.6 PRIVACY IMPACT ASSESSMENT: Characterization of the information

Consider the specific data elements collected and discuss the potential privacy risks and what steps, if any are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete this section)

Consider the following Fair Information Practice Principles (FIPPs) when assessing the risk to individual privacy:

**Principle of Purpose Specification:** Explain how the collection ties with the purpose of the underlying mission of the organization and its enabling authority.

**Principle of Minimization:** Is the information directly relevant and necessary to accomplish the specific purposes of the program?

**Principle of Individual Participation:** Does the program, to the extent possible and practical, collect information directly from the individual?

**Principle of Data Quality and Integrity:** Are there policies and procedures for VA to ensure that personally identifiable information is accurate, complete, and current? This question is related to privacy control AR-1, Governance and Privacy Program, and AR-2, Privacy Impact and Risk Assessment.

Follow the format below when entering your risk assessment:

**Privacy Risk:**
HTH-MA, to assist with a Veteran’s healthcare, collects and maintains only the required Personally Identifiable Information (PII) and Personal Health Information (PHI) information from both a Veteran and the VA’s Care Coordinator. If this data were accessed or inadvertently released to unauthorized parties or the public, it could result in personal, financial, and/or emotional harm to the individual.

**Mitigation:**
HT-MA implements a considerable number of security mechanisms and mitigations including, but not limited to, the following:
- Data is encrypted in transit and at rest.
• Servers are maintained behind VA firewalls.
• Administrative access is provisioned with least user privilege and reviewed at least quarterly.
• Annual security awareness training is required.
• Separate test, development, and production environments.
• Change Management process.
• Application and infrastructure vulnerability scanning and remediation management.
• Disaster Recovery and Incident Response plans in place and assessed annually.
• Anti-virus/malware prevention.
• Physical and environmental data center controls (managed by VA).
• Subject to the VA’s Authority-to-Operate (ATO) security management and control structure.

Section 2. Uses of the Information

The following questions are intended to clearly delineate the use of information and the accuracy of the data being used.

2.1 Describe how the information in the system that will be used in support of the program’s business purpose.

Identify and list each use (both internal and external to VA) of the information collected or maintained. This question is related to privacy control AP-2, Purpose Specification.

<table>

</tbody>
</table>
2.2 What types of tools are used to analyze data and what type of data may be produced?

These questions are related to privacy controls DI-1, Data Quality, DI-2, Data Integrity and Integrity Board, and SE-1, Inventory of Personally Identifiable Information.

2.2a Many systems sift through large amounts of information in response to a user inquiry or programmed functions. Systems may help identify areas that were previously not obvious and need additional research by agents, analysts, or other employees. Some systems perform complex analytical tasks resulting in, among other types of data, matching, relational analysis, scoring, reporting, or pattern analysis. Describe any type of analysis the system conducts and the data that is created from the analysis?

All HT-MA associated data collected is transmitted to and maintained within the Omnivisor Pro system. The Omnivisor Pro system does not utilize any tools to analyze data but rather generates alerts based on defined settings established by the VA Care Coordinator.

2.2b If the system creates or makes available new or previously unutilized information about an individual, explain what will be done with the newly derived information. Will it be placed in the individual's existing record? Will a new record be created? Will any action be taken against or for the individual identified because of the newly derived data? If a new record is created, will the newly created information be accessible to Government employees who make determinations about the individual? If so, explain fully under which circumstances and by whom that information will be used.

Veteran PHI and PII is acquired/maintained within the HT-MA system. This information is available to VA Care Coordinators via MCMS’s Omnivisor Pro application/database which also communicates some data elements with the VA managed VistA and Oracle Health Cerner Electronic Health Record systems.
2.3 How is the information in the system secured?
These questions are related to security and privacy controls SC-9, Transmission Confidentiality, and SC-28, Protection of Information at Rest.

2.3a What measures are in place to protect data in transit and at rest?
HT-MA encrypts data at rest and in transit, along with logical access (strong authentication) controls and a VA user/patient access provisioning process.

2.3b If the system is collecting, processing, or retaining Social Security Numbers, are there additional protections in place to protect SSNs?
HT-MA encrypts data at rest and in transit.

2.3c How is PHI/PHI safeguarded in accordance with OMB Memorandum M-06-15?
All personnel with access participate in annual privacy training and are required to sign the rules of behavior (ROB) which describes what behaviors are allowed and not allowed on a VA system. Access requires management approval and is based on the principal of least privilege.
Additionally, HT-MA implements a considerable number of security mechanisms and mitigations including, but not limited to, the following: Data is encrypted in transit and at rest. Servers are maintained behind VA firewalls. Administrative access is provisioned with least user privilege and reviewed at least quarterly. Annual security awareness training is required. Separate test, development, and production environments. Change Management process. Application and infrastructure vulnerability scanning and remediation management. Disaster Recovery and Incident Response plans in place and tested annually. Anti-virus/malware prevention. Physical and environmental data center controls (managed by VA). Subject to the VA's Authority-to-Operate (ATO) security management and control structure.

2.4 PRIVACY IMPACT ASSESSMENT: Use of the information.
Describe any types of controls that may be in place to ensure that information is handled in accordance with the uses described above. Example: Describe if training for users of the project covers how to appropriately use information. Describe the disciplinary programs or system controls (i.e. denial of access) that are in place if an individual is inappropriately using the information.

Consider the following FIPPs below to assist in providing a response:

Principle of Transparency: Is the PIA and SORN, if applicable, clear about the uses of the information?

Principle of Use Limitation: Is the use of information contained in the system relevant to the mission of the project?
This question is related to privacy control AR-4, Privacy Monitoring and Auditing, AR-5, Privacy Awareness and Training, and SE-2, Privacy Incident response.

2.4a How is access to the PII determined?
Data gathered and stored in the HT-MA system is used to by VA Clinical Care Coordinators to ascertain the current health status of a Veteran. System Administrative access requires management approval, is based on the principal of least privilege, and reviewed at least quarterly.
All personnel with access participate in annual privacy training and are required to sign the rules of behavior (ROB) which describes what behaviors are allowed and not allowed on a VA system. Any inappropriate use of information will be reported to the VA Program Manager.

2.4b Are criteria, procedures, controls, and responsibilities regarding access documented?
Yes, via the MCMS Access Control Standard Operating Procedure (SOP).

2.4c Does access require manager approval?
Yes, all MCMS Administrative access requires manager approval.

2.4d Is access to the PII being monitored, tracked, or recorded?
Yes. Administrative access is monitored through the Solarwinds Event Manager (SEM) auditing tool.

2.4e Who is responsible for assuring safeguards for the PII?
All HT-MA personnel.

Section 3. Retention of Information
The following questions are intended to outline how long information will be retained after the initial collection.

3.1 What information is retained?

*Identify and list all information collected from question 1.1 that is retained by the system. This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal*

<table>

|             | o Electronic Data Interchange Personal Identifier (EDIP)  

### 3.2 How long is information retained?

In some cases, VA may choose to retain files in active status and archive them after a certain period of time. State active file retention periods, as well as archived records, in number of years, for the information and record types. For example, financial data held within your system may have a different retention period than medical records or education records held within your system, please be sure to list each of these retention periods. **The VA records officer should be consulted early in the development process to ensure that appropriate retention and destruction schedules are implemented.** If the system is using cloud technology, will it be following the NARA approved retention length and schedule? This question is related to privacy control DM-2, Data Retention and Disposal.

Health information stored on electronic media is maintained for 75 years following its most recent update. The data is systematically and securely destroyed after this duration in strict adherence to the protocols outlined in the VA Handbook 6500.1 - Electronic Media Sanitization. This handbook mandates the destruction of all data assigned to a high-security categorization. Per the SORN, 24VA10A7 / 85 FR 62406, Policies and Practices for Retention and Disposal of Records, "In accordance with the records disposition authority approved by the Archivist of the United States, paper records and information stored on electronic storage media are maintained for seventy-five (75) years after the last episode of patient care and then destroyed/or deleted. VHA Records Control Schedule (RCS 10–1), Chapter 6." rcs10-1.pdf (va.gov).
3.3 Has the retention schedule been approved by the VA records office and the National Archives and Records Administration (NARA)?

An approved records schedule must be obtained for any IT system that allows the retrieval of a record via a personal identifier. The VA records officer will assist in providing a proposed schedule. The schedule must be formally offered to NARA for official approval. Once NARA approves the proposed schedule, the VA records officer will notify the system owner. Please work with the system Privacy Officer and VA Records Officer to answer these questions.

This question is related to privacy control DM-2, Data Retention and Disposal.

3.3a Are all records stored within the system of record indicated on an approved disposition authority?

Yes. HT-MA records are retained in accordance with the Department of Veterans Affairs Record Control Schedule 10-1, Item Number 6000.2 “Electronic Health Record”.

3.3b Please indicate each records retention schedule, series, and disposition authority?

Retention Schedule: Electronic Medical Records, (EHR) - 75-years
Series: VHA Records Control Schedule (RCS 10–1), Chapter 6, 6000.2b Disposition Authority: (N1–15–02–3, Item 3).

3.4 What are the procedures for the elimination or transfer of SPI?

Explain how records are destroyed, eliminated or transferred to NARA at the end of their mandatory retention period. Please give the details of the process. For example, are paper records shredded on site, or by a shredding company and accompanied by a certificate of destruction, etc.? This question is related to privacy control DM-2, Data Retention and Disposal.

Electronic data and files of any type, including Protected Health Information (PHI), Sensitive Personal Information (SPI), Human Resources records, and more are destroyed in accordance with VA Directive 6500 VA Cybersecurity Program (February 24, 2021) and VA Handbook 6500.1 Electronic Media Sanitization. When required, this data is deleted from their file location and then permanently deleted from the deleted items or Recycle bin. Magnetic media is wiped and sent out for destruction. Digital media is shredded or sent out for destruction.

https://www.va.gov/vapubs/search_action.cfm?dType=1

3.5 Does the system, where feasible, use techniques to minimize the risk to privacy by using PII for research, testing, or training?

Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. These uses of PII increase the risks associated with the unauthorized disclosure or misuse of the information. Please explain what controls have been implemented to protect PII used for testing, training and research. This question is related to privacy control DM-3, Minimization of PII Used in Testing, Training and Research.

The HT-MA system does not use PII or live data for research, testing, or training.
3.6 PRIVACY IMPACT ASSESSMENT: Retention of information

Discuss the risks associated with the length of time data is retained and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

While we understand that establishing retention periods for records is a formal process, there are policy considerations behind how long a project keeps information. The longer a project retains information, the longer it needs to secure the information and assure its accuracy and integrity. The proposed schedule should match the requirements of the Privacy Act to keep the minimum amount of PII for the minimum amount of time, while meeting the Federal Records Act. The schedule should align with the stated purpose and mission of the system.

Consider the following FIPPs below to assist in providing a response:

**Principle of Minimization:** Does the project retain only the information necessary for its purpose? Is the PII retained only for as long as necessary and relevant to fulfill the specified purposes?

**Principle of Data Quality and Integrity:** Has the PIA described policies and procedures for how PII that is no longer relevant and necessary is purged?

This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

Follow the format below:

**Privacy Risk:**
The longer the timeframe that HT-MA system data is kept increases the risk for potential compromise or breach.

**Mitigation:**
HT-MA strictly adheres to the Records Management Schedule in order to ensure that records are not maintained longer than necessary. System Administrative access requires management approval, is based on the principal of least privilege, and reviewed at least quarterly. All personnel with access participate in annual privacy training and are required to sign the rules of behavior (ROB) which describes what behaviors are allowed and not allowed on a VA system. The data is also stored in VA data centers where a layered security infrastructure exists that is complemented by physical and environmental safeguards.

Section 4. Internal Sharing/Receiving/Transmitting and Disclosure

The following questions are intended to define the scope of information sharing/receiving/transmitting within VA.

4.1 With which internal organizations is information shared/received/transmitted? What information is shared/received/transmitted, and for what purpose? How is the information transmitted?

NOTE: Question 3.9 (second table) on Privacy Threshold Analysis should be used to answer this question.
Identify and list the names of any program offices, contractor-supported IT systems, and any other organization or IT system within VA with which information is shared.

State the purpose for the internal sharing. If you have specific authority to share the information, provide a citation to the authority.

For each interface with a system outside your program office, state what specific data elements (PII/PHI) are shared with the specific program office, contractor-supported IT system, and any other organization or IT system within VA.

Describe how the information is transmitted. For example, is the information transmitted electronically, by paper, or by some other means? Is the information shared in bulk, on a case-by-case basis, or does the sharing partner have direct access to the information? This question is related to privacy controls AP-2, Purpose Specification, AR-3, Privacy Requirements for Contractors and Service Providers, AR-8, Accounting of Disclosures, TR-1, Privacy Notice, and UL-1, Internal Use.

**Data Shared with Internal Organizations**

|                  |                                 | • Any other unique identifier:  
|                  |                                 |   o Electronic Data Interchange Personal Identifier (EDIPI)  
|                  |                                 |   o Integrated Control Number (ICN)  
|                  |                                 |   o Omnivisor Pro ID number  
|                  |                                 | Transmitted securely over VA internal using HL7 |

4.2 PRIVACY IMPACT ASSESSMENT: Internal sharing and disclosure

Discuss the privacy risks associated with the sharing of information within the Department and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

This question is related to privacy control UL-1, Internal Use.

Follow the format below:

Privacy Risk:
HT-MA system data may be disclosed to unauthorized individuals which could result information being misused.

Mitigation:
The principle of need-to-know is strictly adhered to by HT-MA personnel. Only personnel with a business need are allowed access to the system.

Section 5. External Sharing/Receiving and Disclosure

The following questions are intended to define the content, scope, and authority for information sharing external to VA, which includes Federal, State, and local governments, and the private sector.

5.1 With which external organizations (outside VA) is information shared/received? What information is shared/received, and for what purpose? How is the information transmitted and what measures are taken to ensure it is secure?

Is the sharing of information outside the agency compatible with the original collection? If so, is it covered by an appropriate routine use in a SORN? If not, please describe under what legal
mechanism the IT system is allowed to share the information in identifiable form or personally identifiable information outside of VA.

NOTE: Question 3.10 on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any Federal, State, or local government agency or private sector organization with which information is shared.

For each interface with a system outside VA, state what specific data elements (PII/PHI) are shared with each specific partner.

What legal mechanisms, authoritative agreements, documentation, or policies are in place detailing the extent of the sharing and the duties of each party? For example, is the sharing of data compatible with your SORN? Then list the SORN and the applicable routine use from the SORN. Is there a Memorandum of Understanding (MOU), Computer Matching Agreement (CMA), or law that mandates the sharing of this information?

Describe how the information is transmitted to entities external to VA and what security measures have been taken to protect it during transmission.

This question is related to privacy control UL-2, Information Sharing with Third Parties

**Data Shared with External Organizations**

5.2 PRIVACY IMPACT ASSESSMENT: External sharing and disclosure

Discuss the privacy risks associated with the sharing of information outside the Department and what steps, if any, are currently being taken to mitigate those identified risks.

If no External Sharing listed on the table above, (State there is no external sharing in both the risk and mitigation fields).

Discuss whether access controls have been implemented and whether audit logs are regularly reviewed to ensure appropriate sharing outside of the Department. For example, is there a Memorandum of Understanding (MOU), contract, or agreement in place with outside agencies or foreign governments.

Discuss how the sharing of information outside of the Department is compatible with the stated purpose and use of the original collection.

This question is related to privacy control AR-2, Privacy Impact and Risk Assessment, AR-3, Privacy Requirements for Contractors and Service Providers, and AR-4, Privacy Monitoring and Auditing

Follow the format below:

**Privacy Risk:**
HT-MA system data may be inadvertently shared with external and/or unauthorized individuals which could result information being misused.

**Mitigation:**
Outside organizations are required to provide their own level of security controls such as access control, authentication, and user logs to prevent unauthorized access. Additional mitigations include:
• All personnel with access to HT-MA system data are required to complete the VA Privacy and Information Security Awareness training and Rules of Behavior (ROB) annually.
• HT-MA adheres to the information security requirements instituted by the VA Office of Information Technology (OIT).

**Section 6. Notice**

The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information.

6.1 Was notice provided to the individual before collection of the information? If yes, please provide a copy of the notice as an Appendix-A 6.1 on the last page of the document. Also provide notice given to individuals by the source system (A notice may include a posted privacy
policy, a Privacy Act notice on forms, or a system of records notice published in the Federal Register.) If notice was not provided, why not?

These questions are related to privacy control TR-1, Privacy Notice, and TR-2, System of Records Notices and Privacy Act Statements, and TR-3, Dissemination of Privacy Program Information.

6.1a This question is directed at the notice provided before collection of the information. This refers to whether the person is aware that his or her information is going to be collected. A notice may include a posted privacy policy, a Privacy Act statement on forms, or a SORN published in the Federal Register, Notice of Privacy Practice provided to individuals for VHA systems. If notice was provided in the Federal Register, provide the citation.

Veterans are asked if they want to enroll in the Home Telehealth Program by their VA Care Coordinator. Confirming they are willing to participate in the program justifies the gathering of the information for HT-MA system. In addition, a notice was provided via a system of records notice published in the Federal Register: Patient Medical Records-VA SORN (24VA10A7).

6.1b If notice was not provided, explain why. If it was provided, attach a copy of the current notice. See Appendix A-6.1, *Enrollment Agreement.

6.1c Describe how the notice provided for the collection of information is adequate to inform those affected by the system that their information has been collected and is being used appropriately. Provide information on any notice provided on forms or on Web sites associated with the collection. See RPM-HT Enrollment Agreement below.
5. RPM-HT Enrollment Agreement

This Enrollment Agreement documents RPM-HT Program information and other educational materials have been given to __________________________ (Name of Veteran patient and/or caregiver). It confirms the information below has been given and is understood and agreed to by the Veteran and/or Caregiver.

RPM-HT programs ensure that all relevant state and federal health-related privacy/confidentiality regulations are met to safeguard the protected health information of all RPM-HT Veterans.

The rights and responsibilities of participation in a VA RPM-HT program have been fully explained and are understood, including the right to refuse telehealth services at any time, and including the fact that refusal to participate in telehealth by a Veteran will not limit or adversely affect further access to VA health care services.

The Veteran and/or caregiver were fully informed about VHA complaint procedures.

Answers to the disease-specific questions and vital signs administered to the Veteran are required every day from the Veteran unless explicitly otherwise instructed, as charted in the Electronic Health Record (EHR). Lack of active participation may impact success in the program and may result in disenrollment from RPM-HT.

In the event of technology/equipment malfunction, the Veteran and/or caregiver should contact the RPM-HT staff.

Veterans will use the technology as directed in provided instructions. This includes, but is not limited to, using the power cord provided with the device and following directions for safe use of batteries as detailed in instructions provided with any devices.

Upon disenrollment from the RPM-HT program the telehealth In-Home Messaging Device (IHMD) will be returned to the Denver Logistics Center (DLC). The RPM-HT staff will order a replacement kit for the Veteran and the Veteran will use the kit with the postage-paid label to return the In-Home Messaging Device (IHMD), as well as cables and any other equipment indicated by the care coordinator. The Veteran can ask RPM-HT staff for assistance with returning their technology/equipment.

The RPM-HT program is provided with the sole intent of monitoring Veterans with stable chronic disease and cannot cover acute exacerbations (flare-ups) or deteriorations. Neither the equipment, nor the care coordinator can provide a route whereby emergency care can be provided. The Veteran and/or caregiver should call 911 if they need to access immediate emergency medical attention.

In the event of an emotional crisis associated with risk of self-harm, VHA has a 24-hour/7 day a week suicide prevention hotline that can be accessed by dialing or texting 988 and then Press 1, or you may call 1-800-273-TALK (8255) and Press 1 for Veterans. The Veteran and/or caregiver will be immediately connected to a qualified caring provider. You may also text 988295 or chat online at https://www.veteranscrisisline.net.

RPM-HT Local Number: ____________________________
Toll Free Number: ____________________________, ext. ______________
RPM-HT Hours of Operation: ____________________________
After hours (including weekends and federal holidays) call: ____________________________

I have reviewed the above items with the Veteran and/or caregiver. The Veteran and/or caregiver understands and agrees to participate in RPM-HT services.

RPM-HT Staff Signature: ____________________________ Date: ____________________________

6. Guidelines for Use of the Agreement

1. This agreement replaces written informed consent for patient enrollment in RPM-HT in VISNs where informed consent is no longer required.
2. This agreement provides a checklist for RPM-HT staff to ensure safety and quality care are provided to their patients following enrollment.
3. It is recommended that a copy of this agreement be given to the patient or caregiver as a record, and a reminder that can reinforce the rights and responsibilities of all parties.
6.2 Do individuals have the opportunity and right to decline to provide information? If so, is a penalty or denial of service attached?

This question is directed at whether the person from or about whom information is collected can decline to provide the information and if so, whether a penalty or denial of service is attached. This question is related to privacy control IP-1, Consent, IP-2, Individual Access, and IP-3, Redress.

Yes. Veteran’s do have the opportunity and right to decline to provide information. Veteran patients are asked if they want to enroll in the VA Home Telehealth Program by the VA Care Coordinators. Participating in the VA Home Telehealth Program requires Veterans to provide information directly to the HT-MA system by using medical devices or telephones located in their home. If a Veteran does not want to provide information, they only need to dis-enroll from the Home Telehealth program.

6.3 Do individuals have the right to consent to particular uses of the information? If so, how does the individual exercise the right?

This question is directed at whether an individual may provide consent for specific uses, or the consent is given to cover all uses (current or potential) of his or her information. If specific consent is required, how would the individual consent to each use? This question is related to privacy control IP-1, Consent.

Yes, Veteran’s do have the right to consent to particular uses of the information. Veterans are notified as part of the enrollment process how their information will be used. Enrollment constitutes consent. Participating in the VA Home Telehealth Program requires Veterans to provide information directly to the HT-MA system. If a Veteran does not want to provide information, they only need to dis-enroll from the program.

6.4 PRIVACY IMPACT ASSESSMENT: Notice

Describe the potential risks associated with potentially insufficient notice and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Has sufficient notice been provided to the individual?

**Principle of Use Limitation:** Is the information used only for the purpose for which notice was provided either directly to the individual or through a public notice? What procedures are in place to ensure that information is used only for the purpose articulated in the notice?

This question is related to privacy control TR-1, Privacy Notice, AR-2, Privacy Impact and Risk Assessment, and UL-1, Internal Use.

Follow the format below:

**Privacy Risk:**
Veterans who provide information to HT-MA system may not know how their information is being shared and used internal to the Department of Veterans Affairs and may be unaware that the HT-MA relays information through intermediary sites.
Mitigation:
This PIA and the VA Home Telehealth enrollment process serve to notify individuals of how information is handled by the HT-MA system.

Section 7. Access, Redress, and Correction

The following questions are directed at an individual’s ability to ensure the accuracy of the information collected about him or her.

7.1 What are the procedures that allow individuals to gain access to their information?

These questions are related to privacy control IP-2, Individual Access, and AR-8, Accounting of Disclosures.

7.1a Cite any procedures or regulations your program has in place that allow access to information. These procedures, at a minimum, should include the agency’s FOIA/Privacy Act practices, but may also include additional access provisions. For example, if your program has a customer satisfaction unit, that information, along with phone and email contact information, should be listed in this section in addition to the agency’s procedures. See 5 CFR 294 and the VA FOIA Web page at http://www.foia.va.gov/ to obtain information about FOIA points of contact and information about agency FOIA processes.

VHA Directive 1605.01 outlines the rights of the Veterans to request access to review their records. VA Form 10-5345a, Individual's Request for a Copy of Their Own Health Information, may be used as the written request requirement. All requests to review must be received by direct mail, fax, in person, or by mail referral from another agency or VA office. All requests for access must be delivered to and reviewed by the System Manager for the concerned VHA system of records, the facility Privacy Officer, or their designee. Each request must be date stamped and reviewed to determine whether the request for access should be granted.

7.1b If the system is exempt from the access provisions of the Privacy Act, please explain the basis for the exemption or cite the source where this explanation may be found, for example, a Final Rule published in the Code of Federal Regulations (CFR)?

The HT-MA system is not exempt from the access provisions of the Privacy Act.

7.1c If the system is not a Privacy Act system, please explain what procedures and regulations are in place that covers an individual gaining access to his or her information?

The HT-MA system is a Privacy Act system.

7.2 What are the procedures for correcting inaccurate or erroneous information?

Describe the procedures and provide contact information for the appropriate person to whom such issues should be addressed? If the correction procedures are the same as those given in question 7.1, state as much. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

VHA Directive 1605.01 outlines the rights of the Veterans to amend to their records. The request must be in writing and adequately describe the specific information the individual believes to be inaccurate, incomplete, irrelevant, or untimely and the reason for this belief. The written request needs to be mailed or delivered to the VA health care facility that maintains the record. A request
for amendment of information contained in a system of records must be delivered to the System Manager, or designee, for the concerned VHA system of records, and the facility Privacy Officer, or designee, to be date stamped; and be filed appropriately. In reviewing requests to amend or correct records, the System Manager must be guided by the criteria set forth in VA regulation 38 CFR 1. 579. The VHA Notice of Privacy Practices also informs individuals how to file an amendment request with VHA.

7.3 How are individuals notified of the procedures for correcting their information?

How are individuals made aware of the procedures for correcting his or her information? This may be through notice at collection or other similar means. This question is meant to address the risk that even if procedures exist to correct information, if an individual is not made fully aware of the existence of those procedures, then the benefits of the procedures are significantly weakened.

This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

The SORN 24VA10A7 and VHA Notice of Privacy Practices informs individuals how to file an amendment request with VHA.

7.4 If no formal redress is provided, what alternatives are available to the individual?

Redress is the process by which an individual gains access to his or her records and seeks corrections or amendments to those records. Redress may be provided through the Privacy Act and Freedom of Information Act (FOIA), and also by other processes specific to a program, system, or group of systems. Example: Some projects allow users to directly access and correct/update their information online. This helps ensure data accuracy.

This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

Formal redress is addressed in SORN 24VA10A7 and VHA Notice of Privacy Practices informs individuals how to file an amendment request with VHA.

7.5 PRIVACY IMPACT ASSESSMENT: Access, redress, and correction

Discuss what risks there currently are related to the Department’s access, redress, and correction policies and procedures for this system and what, if any, steps have been taken to mitigate those risks. For example, if a project does not allow individual access, the risk of inaccurate data needs to be discussed in light of the purpose of the project. For example, providing access to ongoing law enforcement activities could negatively impact the program’s effectiveness because the individuals involved might change their behavior. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

Principle of Individual Participation: Is the individual provided with the ability to find out whether a project maintains a record relating to him?

Principle of Individual Participation: If access and/or correction is denied, then is the individual provided notice as to why the denial was made and how to challenge such a denial?

Principle of Individual Participation: Is there a mechanism by which an individual is able to prevent information about him obtained for one purpose from being used for other purposes without his knowledge?

This question is related to privacy control IP-3, Redress.
Follow the format below:

**Privacy Risk:**
Information provided by the Veteran may be inadvertently inaccurate and the Veteran may not be aware and/or know how to correct the information.

**Mitigation:**
VA Care Coordinators review all information input into the HT-MA system. If a Veteran wants to access their information, they may ask their VA Clinical Care Coordinator to provide their information. They may also be directed to the Release of Information Department where they can request access to their information.

**Section 8. Technical Access and Security**

The following questions are intended to describe technical safeguards and security measures.

8.1 What procedures are in place to determine which users may access the system, and are they documented?
These questions are related to privacy control AR-7, Privacy-Enhanced System Design and Development.

8.1a Describe the process by which an individual receives access to the system?
Administrator procedures are in place for the two primary types of users that access the HT-MA system, MCMS System Administrators and VA Client Care Coordinators.

(1) MCMS System Administrators access the HT-MA system in order to maintain the functionality of the system, which requires elevated privileges and is associated with their position. This access is granted through the VA onboarding process via the ePAS (electronic Permission Access System) process. Only users with a need-to-know and a valid business need are granted access. Administrative access requires management approval, provided on a least privilege basis, and is reviewed quarterly.

(2) VA Client Care Coordinators are granted access to the system in order to review patient records and provide support to the Veterans. Access is granted and set up in the Omnivisor Pro system by VA Lead Care Coordinators.

8.1b Identify users from other agencies who may have access to the system and under what roles these individuals have access to the system. Who establishes the criteria for what PII can be shared?
No users from other agencies have access to the system.

8.1c Describe the different roles in general terms that have been created to provide access to the system? For example, certain users may have “read-only” access while others may be permitted to make certain amendments or changes to the information.

(1) MCMS System Administrators access the HT-MA system in order to maintain the functionality of the system, which requires elevated privileges and is associated with their
position. (2) VA Client Care Coordinators are granted access to the system in order to review patient records and provide support to the Veterans.

8.2 Will VA contractors have access to the system and the PII? If yes, what involvement will contractors have with the design and maintenance of the system? Has a contractor confidentiality agreement, Business Associate Agreement (BAA), or a Non-Disclosure Agreement (NDA) been developed for contractors who work on the system?

If so, how frequently are contracts reviewed and by whom? Describe the necessity of the access provided to contractors to the system and whether clearance is required. If Privacy Roles and Responsibilities have been established to restrict certain users to different access levels, please describe the roles and associated access levels. Explain the need for VA contractors to have access to the PII. This question is related to privacy control AR-3, Privacy Requirements for Contractors, and Service Providers.

The HT-MA system is maintained by Medtronic Care Management Services (MCMS) who are contracted by the VA Office of Connected Care/VHA Telehealth Services to provide support and assistance to the program. The contract award number is VA791-17-D-0004. The contract award was made for one year with the option for another 4 renewable years. The contract is reviewed each year and renewed by way of a contract amendment. All MCMS personnel involved in the operations of the HT-MA system complete the VA Security Clearance process. The following documents are reviewed and signed annually by each team member, (1) Non-Disclosure Agreement (2) Contractor Rules of Behavior. Additionally, team members must also complete, an annual basis the VHA Privacy and HIPAA Focused Training and VA Privacy and Information Security Awareness Training.

8.3 Describe what privacy training is provided to users either generally or specifically relevant to the program or system?

VA offers privacy and security training. Each program or system may offer training specific to the program or system that touches on information handling procedures and sensitivity of information. Please describe how individuals who have access to PII are trained to handle it appropriately. This question is related to privacy control AR-5, Privacy Awareness and Training.

All personnel involved in the operations of the HT-MA program have completed the initial and annual security and privacy training required by the contract. Users with elevated privileges have undergone training unique to their specific role. Team members must also complete the VA’s Talent Management System (TMS) Privacy and HIPAA Focused Training and Privacy and Information Security Awareness Training. Medtronic Care Management Services (MCMS) also requires all employees to complete annual MCMS based HIPAA and Security trainings.

8.4 Has Authorization and Accreditation (A&A) been completed for the system? Yes

8.4a If Yes, provide:

1. The Security Plan Status: Approved
2. The System Security Plan Status Date: 6.8.23
3. The Authorization Status: Authorization to Operate (ATO)
4. The Authorization Date: 8.28.22
5. The Authorization Termination Date: 8.28.25  
6. The Risk Review Completion Date: 8.7.23  
7. The FIPS 199 classification of the system (LOW/MODERATE/HIGH): HIGH

Please note that all systems containing SPI are categorized at a minimum level of “moderate” under Federal Information Processing Standards Publication 199.

8.4b If No or In Process, provide your Initial Operating Capability (IOC) date.

Section 9 – Technology Usage
The following questions are used to identify the technologies being used by the IT system or project.

9.1 Does the system use cloud technology? If so, what cloud model is being utilized?
   If so, Does the system have a FedRAMP provisional or agency authorization? If the system does use cloud technology, but does not have FedRAMP authorization, explain how the Cloud Service Provider (CSP) solution was assessed and what FedRAMP documents and processes were used for the assessment in order to comply with VA Handbook 6517. Types of cloud models include: Software as a Service (SaaS), Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Commercial off the Shelf (COTS), Desktop as a Service (DaaS), Mobile Backend as a Service (MBaaS), Information Technology Management as a Service (ITMaaS). This question is related to privacy control UL-1, Information Sharing with Third Parties. Note: For systems utilizing the VA Enterprise Cloud (VAEC), no further responses are required after 9.1. (Refer to question 3.3.1 of the PTA)
   No.

9.2 Does the contract with the Cloud Service Provider, Contractors and VA customers establish who has ownership rights over data including PII? (Provide contract number and supporting information about PII/PHI from the contract). (Refer to question 3.3.2 of the PTA) This question is related to privacy control AR-3, Privacy Requirements for Contractors, and Service Providers.
   <<ADD ANSWER HERE>>

9.3 Will the CSP collect any ancillary data and if so, who has ownership over the ancillary data?
   Per NIST 800-144, cloud providers hold significant details about the accounts of cloud consumers that could be compromised and used in subsequent attacks. Ancillary data also involves information the cloud provider collects or produces about customer-related activity in the cloud. It includes data collected to meter and charge for consumption of resources, logs and audit trails, and other such metadata that is generated and accumulated within the cloud environment. This question is related to privacy control DI-1, Data Quality.
   <<ADD ANSWER HERE>>
9.4 NIST 800-144 states, “Organizations are ultimately accountable for the security and privacy of data held by a cloud provider on their behalf.” Is this principle described in contracts with customers? Why or why not?
What are the roles and responsibilities involved between the organization and cloud provider, particularly with respect to managing risks and ensuring organizational requirements are met? This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

<<ADD ANSWER HERE>>

9.5 If the system is utilizing Robotics Process Automation (RPA), please describe the role of the bots.
Robotic Process Automation is the use of software scripts to perform tasks as an automated process that executes in parallel with or in place of human input. For example, will the automation move or touch PII/PHI information. RPA may also be referred to as “Bots” or Artificial Intelligence (AI).

<<ADD ANSWER HERE>>

5. RPM-HT Enrollment Agreement

This Enrollment Agreement documents RPM-HT Program information and other educational materials have been given to [Name of Veteran patient and/or caregiver]. It confirms the information below has been given and is understood and agreed to by the Veteran and/or Caregiver.

RPM-HT programs ensure that all relevant and federal health-related privacy/confidentiality regulations are met to safeguard the protected health information of all RPM-HT Veterans.

The rights and responsibilities of participation in a VHA RPM-HT program have been fully explained and are understood, including the right to refuse telehealth services at any time, and including the fact that refusal to participate in telehealth by a Veteran will not limit or adversely affect further access to VA health care services.

The Veteran and/or Caregiver were fully informed about VHA complaint procedures.

Answers to the disease-specific questions and vital signs administered to the Veteran are required every day from the Veteran unless explicitly otherwise instructed, as charted in the Electronic Health Record (EHR). Lack of active participation may impact success in the program and may result in discontinuation.

In the event of technology/equipment malfunction, the Veteran and/or Caregiver should contact the RPM-HT staff.

Veterans will use the technology as directed in provided instructions. This includes, but is not limited to, using the power cord provided with the device and following directions for safe use of batteries as detailed in instructions provided with any devices.

Upon discontinuation from the RPM-HT program the telehealth In-Home Messaging Device (HMID) will be returned to the Denver Logistics Center (DLC). The RPM-HT staff will order a Retrieval Kit for the Veteran and the Veteran will use the kit with the postage-paid label to return the In-Home Messaging Device (HMID), as well as cables and any other equipment indicated by the care coordinator. The Veteran can ask RPM-HT staff for assistance with returning the technology/equipment.

The RPM-HT program is provided with the sole intent of monitoring Veterans with stable chronic disease and cannot cover acute exacerbations (flare ups) or deteriorations. Neither the equipment, nor the care coordinator can provide a route whereby emergency care can be provided. The Veteran and/or Caregiver should call 911 if they need to access immediate emergency medical attention.

In the event of an emotional crisis associated with risk of self-harm, VHA has a 24 hour/7 day a week suicide prevention hotline that can be accessed by dialing or texting 988 and then Press 1, or you may call 1-800-273-TALK (8255) and Press 1 for Veterans. The Veteran and/or Caregiver should call 911 if they need to access immediate emergency medical attention.

Remote Patient Monitoring Home Telehealth Enrollment Agreement 3 Revision 1 July 2022
6. Guidelines for Use of the Agreement

1. This agreement replaces written informed consent for patient enrollment in RPM-HT in VISNs where informed consent is no longer required.
2. This agreement provides a checklist for RPM-HT staff to ensure safety and quality care are provided to their patients following enrollment.
3. It is recommended that a copy of this agreement be given to the patient or caregiver as a record, and a reminder that can reinforce the rights and responsibilities of all parties.
