Abstract

The abstract provides the simplest explanation for “what does the system do?”.

Cisco WebEx -E —Federal Risk and Authorization Management Program (FedRAMP) Authorized Cisco WebEx -E (the “Service” or WebEx”) is a cloud-based web and video conferencing solution made available by WebEx to companies or persons (“Customers,” “you,” or “your”) who purchase it for use by their authorized users (each, a “user”). The Service enables global employees and virtual teams to collaborate in real time from anywhere, anytime, on any mobile device or video system as though they were working in the same room. Solutions include meetings, events, training, and support services.

Overview

The overview is the most important section of the PIA. A thorough and clear overview gives the reader the appropriate context to understand the responses in the PIA. The overview should contain the following elements:

1 General Description
   A. What is the IT system name and the name of the program office that owns the IT system?
      Cisco WebEx -E is a FedRAMP Authorized collaboration platform that allows users to instantly connect in a way that is as personal as a face-to-face meeting. It falls within the Development Security Operations, Solutions Delivery, Office of Information Technology, IT Operations and Services. The meeting host has the option to record meetings and all users have the option to upload and preserve files shared during and outside of meetings, which may be discoverable in a legal matter. The meeting host should inform all meeting attendees prior to recording if the meeting host intends to record the meeting. If the meeting host opts not to preserve the meeting content, it disappears from the Webex Meetings platform immediately after the meeting concludes.

   B. What is the business purpose of the program, IT system, or technology and how it relates to the program office and agency mission?
      WebEx is a collaboration suite of tools designed for VA Employees to connect to others, (through the internet, equinox, or PSTN). WebEx allows VA users to communicate with audio, video, text chat, file sharing, whiteboard, and other features. - The WebEx service enables global employees and virtual teams to collaborate in real time from anywhere, anytime, on any mobile device or video system as though they were working in the same room. Solutions include meetings, events, training, and support services.

   C. Who is the owner or control of the IT system or project?
2. Information Collection and Sharing

D. What is the expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual?

100,000+, VA employees, Veteran’s, and their dependents

E. What is a general description of the information in the IT system and the purpose for collecting this information?

The type of information collected are Name, E-mail, Phone number, video, and audio. This information is collected to provide user Identity for meeting access.

F. What information sharing conducted by the IT system? A general description of the modules and subsystems, where relevant, and their functions.

Users email address is shared with VA Microsoft Active Directory Assessing for authentication. No external sharing of information is conducted.

G. Users email address is shared with VA Microsoft Active Directory Assessing for authentication. No external sharing of information is conducted. Is the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites?

This system is not operated in more than one site.

3. Legal Authority and SORN

H. What is the citation of the legal authority to operate the IT system?

Legal Authority: Privacy Act of 1974, 5 U.S.C 552a, as amended; Webex is covered under the SORN- 150VA10 - Enterprise Identity and Demographics Records-VA https://www.govinfo.gov/content/pkg/FR-2023-11-02/pdf/2023-24193.pdf146VA005Q3 - Department of Veterans Affairs Identity Management System (VAIDMS) E8-6120.pdf (govinfo.gov)

I. If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval? If the system is using cloud technology, does the SORN for the system cover cloud usage or storage?

The system is not in the process of being modified. 150VA10 - Enterprise Identity and Demographics Records covers using cloud technology.

4. System Changes

J. Will the completion of this PIA will result in circumstances that require changes to business processes?

No changes to business processes are required.

K. Will the completion of this PIA could potentially result in technology changes?

Completion of this PIA will not result in technology changes.
Section 1. Characterization of the Information

The following questions are intended to define the scope of the information requested and collected as well as the reasons for its collection as part of the program, IT system, or technology being developed.

1.1 What information is collected, used, disseminated, created, or maintained in the system?

Identify and list all Sensitive Personal Information (SPI) that is collected and stored in the system, including Individually Identifiable Information (III), Individually Identifiable Health Information (IIHI), Protected Health Information (PHI), and Privacy-Protected Information. For additional information on these information types and definitions, please see VA Directives and Handbooks in the 6500 series (https://vaww.va.gov/vapubs/). If the system creates information (for example, a score, analysis, or report), list the information the system is responsible for creating.

If a requesting system receives information from another system, such as a response to a background check, describe what information is returned to the requesting system. This question is related to privacy control AP-1, Authority To Collect, and AP-2, Purpose Specification.

The information selected below must match the information provided in question 2.1 as well as the data elements columns in 4.1 and 5.1. It must also match the information provided in question 3.4 of the PTA.

Please check any information listed below that your system collects, uses, disseminates, creates, or maintains. If additional SPI is collected, used, disseminated, created, or maintained, please list those in the text box below:

- [ ] Name
- [ ] Social Security Number
- [ ] Date of Birth
- [ ] Mother’s Maiden Name
- [ ] Personal Mailing Address
- [ ] Personal Phone Number(s)
- [ ] Personal Fax Number
- [ ] Personal Email Address
- [ ] Emergency Contact Information (Name, Phone Number, etc. of a different individual)
- [ ] Financial Information
- [ ] Health Insurance Beneficiary Numbers
- [ ] Certificate/License numbers¹
- [ ] Vehicle License Plate Number
- [ ] Internet Protocol (IP) Address Numbers
- [ ] Medications
- [ ] Medical Records
- [ ] Race/Ethnicity
- [ ] Tax Identification Number
- [ ] Medical Record Number
- [ ] Gender
- [ ] Integrated Control Number (ICN)
- [ ] Military History/Service Connection
- [ ] Next of Kin
- [x] Other Data Elements (list below)

Other PII/PHI data elements: Unsolicited PII/PHI voluntarily provided via recordings, VA email address,

PII Mapping of Components (Servers/Database)

¹*Specify type of Certificate or License Number (e.g., Occupational, Education, Medical)
WebEx consists of one key components (servers/databases/instances/applications/software/application programming interfaces (API)). Each component has been analyzed to determine if any elements of that component collect PII. The type of PII collected by WebEx and the reasons for the collection of the PII are in the table below.

**Note:** Due to the PIA being a public facing document, please do not include server names in the table. The first table of 3.9 in the PTA should be used to answer this question.

### Internal Components Table

<table>
<thead>
<tr>
<th>Component Name (Database, Instances, Application, Software, Application Program Interface (API) etc.) that contains PII/PHI</th>
<th>Does this system collect PII? (Yes/No)</th>
<th>Does this system store PII? (Yes/No)</th>
<th>Type of PII (SSN, DOB, etc.)</th>
<th>Reason for Collection/Storage of PII</th>
<th>Safeguards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco WebEx Database (Cluster-F)</td>
<td>Yes</td>
<td>Yes</td>
<td>Name, VA email address, and other unsolicited PII/PHI voluntarily provided via recordings,</td>
<td>Name and VA email address for user registration and authentication with SSOi. Unsolicited PII/PHI voluntarily provided via recordings are maintained for VA employee only access.</td>
<td>Information in transit - Virtual Private Network (VPN) tunnel that is FIPS 140-compliant. Information at rest - encrypts application data using FIPS 140-2 validated cryptography.</td>
</tr>
</tbody>
</table>

### 1.2 What are the sources of the information in the system?

These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.2a List the individual, entity, or entities providing the specific information identified above. For example, is the information collected directly from the individual as part of an application for a benefit, or is it collected from other sources such as commercial data aggregators?

All users provide their name and email address to gain access to Webex. In addition, authorized users will communicate with other users in Webex. Webex enables users that are provisioned access to the Veterans Affairs instance to communicate with all other provisioned users. Users can identify one another by searching for either the users first and last name or their Webex handle (a unique username specific to the Webex...
application for a given user). This communication happens in a variety of means:

- **Channels** – either public (any user in the instance can join them) or private (only invited users can join them) where messages, files, and integrations can interact and enable workflows.
- **Direct messages** – one to one format in which users can message other users on the Veterans Affairs instance without other users seeing their conversation.
- **Calls** – Webex enables VOIP calling for users within the Veterans Affairs instance. New employees onboarding to VA or reporting their incapacitation for work will provide information in a private channel or direct message as instructed by the VA supervisor or program.
- **Recordings** – are maintained for VA employee only access.

1.2b Describe why information from sources other than the individual is required? For example, if a program’s system is using data from a commercial aggregator of information or data taken from public Web sites, state the fact that this is where the information is coming from and then in question indicate why the system is using this source of data.

Information is received from other systems as part of product/project management based on thresholds set for notification. The information from the other systems is used to notify product/project teams so appropriate action can be taken to maintain expected level of availability and operational response.

1.2c Does the system create information (for example, a score, analysis, or report), list the system as a source of information?

This system does not create a score, analysis, or report.

1.3 How is the information collected?

These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.3a This question is directed at the means of collection from the sources listed in question 1.2. Information may be collected directly from an individual, received via electronic transmission from another system, or created by the system itself. Specifically, is information collected through technologies or other technologies used in the storage or transmission of information in identifiable form?

Information is electronically collected directly from the individuals.

1.3b If the information is collected on a form and is subject to the Paperwork Reduction Act, what is the form’s OMB control number and the agency form number?

The information is not collected on a form nor is it subject to the Paperwork Reduction Act.

1.4 How will the information be checked for accuracy? How often will it be checked?

These questions are related to privacy controls DI-1, Data Quality, and DI-2, Data Integrity and Integrity Board.

1.4a Discuss whether and how often information stored in the system is checked for accuracy. Is information in the system checked against any other source of information (within or outside your organization) before the information is used to make decisions about an individual? For example, is there a computer matching agreement in place with another government agency? For systems that
receive data from internal data sources or VA IT systems, describe the system checks to ensure that data corruption has not occurred during transmission.

Information is checked for accuracy by the user that enters the information. For internal users’ access is not granted if information is not accurate. No additional checks are conducted. Accuracy is only checked for the internal users at the time of log-in.

1.4b Does the system check for accuracy by accessing a commercial aggregator of information, describe this process and the levels of accuracy required by the contract?

This system does not check for accuracy by accessing a commercial aggregator of information.

1.5 What specific legal authorities, arrangements, and agreements defined the collection of information?

List the full legal authority for operating the system, specifically the authority to collect the information listed in question 1.1. Provide the authorities in a manner understandable to any potential reader, i.e., do not simply provide a legal citation; use statute names or regulations in addition to citations. Legal authorities include Federal laws, regulations, statutes, and Executive Orders. This question is related to privacy control AP-1, Authority to Collect.

1.6 PRIVACY IMPACT ASSESSMENT: Characterization of the information

Consider the specific data elements collected and discuss the potential privacy risks and what steps, if any are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete this section)

Consider the following Fair Information Practice Principles (FIPPs) when assessing the risk to individual privacy:

Principle of Purpose Specification: Explain how the collection ties with the purpose of the underlying mission of the organization and its enabling authority.

Principle of Minimization: Is the information directly relevant and necessary to accomplish the specific purposes of the program?

Principle of Individual Participation: Does the program, to the extent possible and practical, collect information directly from the individual?
**Principle of Data Quality and Integrity:** Are there policies and procedures for VA to ensure that personally identifiable information is accurate, complete, and current? This question is related to privacy control AR-1, Governance and Privacy Program, and AR-2, Privacy Impact and Risk Assessment.

Follow the format below when entering your risk assessment:

**Privacy Risk:** Name, E-mail, are collected to create an account on the Webex platform. Due to the sensitive nature of this data, there is a risk that data can be accessed by an unauthorized individual.

**Mitigation:** Only the minimum required data is used, optional PII such as mailing address is not required. Two Form Factor Authentication is required by VA and therefore the collection of PII is necessary for Authentication, Authorization, and Authorization. This information is entered the first time for account creation directly by the individual. Only that individual can see any of the information outside of the user’s name appearing in the participants list during a conference.

**Section 2. Uses of the Information**

The following questions are intended to clearly delineate the use of information and the accuracy of the data being used.

2.1 Describe how the information in the system that will be used in support of the program’s business purpose.

*Identify and list each use (both internal and external to VA) of the information collected or maintained. This question is related to privacy control AP-2, Purpose Specification.*

<table>
<thead>
<tr>
<th>PII/PHI Data Element</th>
<th>Internal Use</th>
<th>External Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name/ Email</td>
<td>Used to grant user access to Webex.</td>
<td>Not used</td>
</tr>
<tr>
<td>Other unsolicited PII/PHI voluntarily provided</td>
<td>Not used</td>
<td>Not used</td>
</tr>
</tbody>
</table>

2.2 What types of tools are used to analyze data and what type of data may be produced?

*These questions are related to privacy controls DI-1, Data Quality, DI-2, Data Integrity and Integrity Board, and SE-1, Inventory of Personally Identifiable Information.*

2.2a Many systems sift through large amounts of information in response to a user inquiry or programmed functions. Systems may help identify areas that were previously not obvious and need additional research by agents, analysts, or other employees. Some systems perform complex analytical tasks resulting in, among other types of data, matching, relational analysis, scoring, reporting, or pattern analysis. Describe any type of analysis the system conducts and the data that is created from the analysis?
No data is created from the system and no analysis are conducted on the data that is stored.

2.2b If the system creates or makes available new or previously unutilized information about an individual, explain what will be done with the newly derived information. Will it be placed in the individual’s existing record? Will a new record be created? Will any action be taken against or for the individual identified because of the newly derived data? If a new record is created, will the newly created information be accessible to Government employees who make determinations about the individual? If so, explain fully under which circumstances and by whom that information will be used.

This system does not process or analyze the data submitted. The data provided is used by project teams to communicate and collaborate more efficiently than using email. No new records are created or retained; therefore, remaining questions are not applicable.

2.3 How is the information in the system secured?
These questions are related to security and privacy controls SC-9, Transmission Confidentiality, and SC-28, Protection of Information at Rest.

2.3a What measures are in place to protect data in transit and at rest?
The system encrypts data at rest and data in transit,

2.3b If the system is collecting, processing, or retaining Social Security Numbers, are there additional protections in place to protect SSNs?
This system does not collect, process, or retain Social Security Numbers.

2.3c How is PHI/PHI safeguarded in accordance with OMB Memorandum M-06-15?

Single Sign-On (SSO) – Administrators can configure Cisco Webex Services to work with their existing SSO solutions. Cisco Webex Services supports identity providers using Security Assertion Markup Language (SAML) 2.0 and Open Authorization (OAuth) 2.0. Directory synchronization – Administrators can have employee lifecycle changes reflected in Cisco Webex Services in real-time when using Microsoft Active Directory

2.4 PRIVACY IMPACT ASSESSMENT: Use of the information.

Describe any types of controls that may be in place to ensure that information is handled in accordance with the uses described above. Example: Describe if training for users of the project covers how to appropriately use information. Describe the disciplinary programs or system controls (i.e. denial of access) that are in place if an individual is inappropriately using the information.

Consider the following FIPPs below to assist in providing a response:

Principle of Transparency: Is the PIA and SORN, if applicable, clear about the uses of the information?

Principle of Use Limitation: Is the use of information contained in the system relevant to the mission of the project?
2.4a How is access to the PII determined?
VA employee and contractor who need access to this system, received the supervisor or the employee with supervisor approval submits an ePAS ticket, the System Owner then will determine is access is necessary and grant access.

2.4b Are criteria, procedures, controls, and responsibilities regarding access documented?
Webex Operational Manual and SOPs

2.4c Does access require manager approval?
Users can be invited to join Webex for communicating and collaborating. Approval for access is limited to System Administrators with role of workspace owner or workspace administrator.

2.4d Is access to the PII being monitored, tracked, or recorded?
User login activities in the system are monitored, tracked, and recorded.

2.4e Who is responsible for assuring safeguards for the PII?
Users are responsible for adhering to VA policies and rules of behavior for safeguarding PII.

Section 3. Retention of Information
The following questions are intended to outline how long information will be retained after the initial collection.

3.1 What information is retained?
Identify and list all information collected from question 1.1 that is retained by the system.
This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal
Name, VA email address

3.2 How long is information retained?
In some cases, VA may choose to retain files in active status and archive them after a certain period of time. State active file retention periods, as well as archived records, in number of years, for the information and record types. For example, financial data held within your system may have a different retention period than medical records or education records held within your system, please be sure to list each of these retention periods. The VA records officer should be consulted early in the development process to ensure that appropriate retention and destruction schedules are implemented. If the system is using cloud technology, will it be following the NARA approved
retention length and schedule? This question is related to privacy control DM-2, Data Retention and Disposal.

Name, VA email address and recordings are stored as long as employee is active in the VA network. Records purged when VA Employees and Contractors are terminated or leave the position requiring access.

3.3 Has the retention schedule been approved by the VA records office and the National Archives and Records Administration (NARA)?

An approved records schedule must be obtained for any IT system that allows the retrieval of a record via a personal identifier. The VA records officer will assist in providing a proposed schedule. The schedule must be formally offered to NARA for official approval. Once NARA approves the proposed schedule, the VA records officer will notify the system owner. Please work with the system Privacy Officer and VA Records Officer to answer these questions.

This question is related to privacy control DM-2, Data Retention and Disposal.

3.3a Are all records stored within the system of record indicated on an approved disposition authority?

GENERAL RECORDS SCHEDULE 3.2: Information Systems Security Records, Item 030

https://www.archives.gov/records-mgmt/grs.html

3.3b Please indicate each records retention schedule, series, and disposition authority?

Item 030

System access records.
These records are created as part of the user identification and authorization process to gain access to systems. Records are used to monitor inappropriate systems access by users.
Includes records such as:
· user profiles
· log-in files
· password files
· audit trail files and extracts
· system usage files
· cost-back files used to assess charges for system use
Exclusion 1: Excludes records relating to electronic signatures.
Exclusion 2: Does not include monitoring for agency mission activities such as law enforcement.

Systems not requiring special accountability for access:
These are user identification records generated according to preset requirements, typically system generated. A system may, for example, prompt users for new passwords every 90 days for all users.
Temporary: Destroy when business use ceases.
Disposition Authority: DAA-GRS-2013-0006-000
3.4 What are the procedures for the elimination or transfer of SPI?

Explain how records are destroyed, eliminated or transferred to NARA at the end of their mandatory retention period. Please give the details of the process. For example, are paper records shredded on site, or by a shredding company and accompanied by a certificate of destruction, etc.? This question is related to privacy control DM-2, Data Retention and Disposal.

Name, VA email address and recordings are stored as long as employee is active in the VA network. Records purged when VA Employees and Contractors are terminated or leave the position requiring access. All other information is deleted from the Webex Meetings platform within 60 days.

Electronic data and files of any type, including Protected Health Information (PHI), Sensitive Personal Information (SPI), Human Resources records, and more are destroyed in accordance with VA Directive 6500 VA Cybersecurity Program (February 24, 2021) and VA Handbook 6500.1 Electronic Media Sanitization. When required, this data is deleted from their file location and then permanently deleted from the deleted items or Recycle bin. Magnetic media is wiped and sent out for destruction. Digital media is shredded or sent out for destruction.

3.5 Does the system, where feasible, use techniques to minimize the risk to privacy by using PII for research, testing, or training?

Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. These uses of PII increase the risks associated with the unauthorized disclosure or misuse of the information. Please explain what controls have been implemented to protect PII used for testing, training and research. This question is related to privacy control DM-3, Minimization of PII Used in Testing, Training and Research.

Webex is not used for research, testing or training. Employee name and email is used for intended purposes only which is communication and collaboration. Initial privacy training is required for new employees and contractors, and at least annually thereafter via the VA OIT Talent Management System (TMS). VA privacy awareness training program commences with the VA OIT TMS training, VA Privacy Information Security Awareness and Rules of Behavior (ROB), number 10176. Following the training, all information system users will be able to identify the types of information that must be carefully handled to protect privacy; recognize the required information security practices, legal requirements, and consequences and penalties for non-compliance; and explain how to report.

3.6 PRIVACY IMPACT ASSESSMENT: Retention of information

Discuss the risks associated with the length of time data is retained and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

While we understand that establishing retention periods for records is a formal process, there are policy considerations behind how long a project keeps information. The longer a project retains
information, the longer it needs to secure the information and assure its accuracy and integrity. The proposed schedule should match the requirements of the Privacy Act to keep the minimum amount of PII for the minimum amount of time, while meeting the Federal Records Act. The schedule should align with the stated purpose and mission of the system.

Consider the following FIPPs below to assist in providing a response:

**Principle of Minimization:** Does the project retain only the information necessary for its purpose? Is the PII retained only for as long as necessary and relevant to fulfill the specified purposes?

**Principle of Data Quality and Integrity:** Has the PIA described policies and procedures for how PII that is no longer relevant and necessary is purged?

This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

Follow the format below:

**Privacy Risk:** As the length of time that PII is retained increases, the probability of the risk of exposure of PII increases. This data is required for login/account creation purposes and is used to meet VA requirements for 2 Form Factor Authentication.

**Mitigation:** Records purged when VA Employees and Contractors are terminated or leave the position requiring access. WebEx has met all requirements to obtain a FEDRAMP Moderate certification. NIST Security controls are implemented to ensure the data is protected. WebEx management has an independent group within the Cisco Security & Trust Organization that performs periodic risk assessments. Activities, remediation, and initiatives are monitored and reported to management. The Data Protection & Privacy team within Cisco’s Security & Trust Organization coordinates the Data Incident Response Process and manages the enterprise-wide response to data-centric incidents.

**Section 4. Internal Sharing/Receiving/Transmitting and Disclosure**

The following questions are intended to define the scope of information sharing/receiving/transmitting within VA.

**4.1 With which internal organizations is information shared/received/transmitted? What information is shared/received/transmitted, and for what purpose? How is the information transmitted?**

**NOTE:** Question 3.9 (second table) on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any program offices, contractor-supported IT systems, and any other organization or IT system within VA with which information is shared.

State the purpose for the internal sharing. If you have specific authority to share the information, provide a citation to the authority.
For each interface with a system outside your program office, state what specific data elements (PII/PHI) are shared with the specific program office, contractor-supported IT system, and any other organization or IT system within VA.

Describe how the information is transmitted. For example, is the information transmitted electronically, by paper, or by some other means? Is the information shared in bulk, on a case-by-case basis, or does the sharing partner have direct access to the information? This question is related to privacy controls AP-2, Purpose Specification, AR-3, Privacy Requirements for Contractors and Service Providers, AR-8, Accounting of Disclosures, TR-1, Privacy Notice, and UL-1, Internal Use.

Data Shared with Internal Organizations

<table>
<thead>
<tr>
<th>List the Program Office or IT System information is shared/received with</th>
<th>List the purpose of the information being shared/received with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program Office or IT system</th>
<th>Describe the method of transmittal</th>
</tr>
</thead>
<tbody>
<tr>
<td>VA Microsoft Active Directory Assessing</td>
<td>For user authentication</td>
<td>Name and VA Email address</td>
<td>HTTPS</td>
</tr>
</tbody>
</table>

4.2 PRIVACY IMPACT ASSESSMENT: Internal sharing and disclosure

Discuss the privacy risks associated with the sharing of information within the Department and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

This question is related to privacy control UL-1, Internal Use.

Follow the format below:

**Privacy Risk:** An employee was granted elevated privileges inappropriately.

**Mitigation:** Quarterly audits are conducted by the Information System Security Officer in Electronic Permission Access System (ePAS)

**Section 5. External Sharing/Receiving and Disclosure**

The following questions are intended to define the content, scope, and authority for information sharing external to VA, which includes Federal, State, and local governments, and the private sector.

5.1 With which external organizations (outside VA) is information shared/received? What information is shared/received, and for what purpose? How is the information transmitted and what measures are taken to ensure it is secure?
Is the sharing of information outside the agency compatible with the original collection? If so, is it covered by an appropriate routine use in a SORN? If not, please describe under what legal mechanism the IT system is allowed to share the information in identifiable form or personally identifiable information outside of VA.

NOTE: Question 3.10 on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any Federal, State, or local government agency or private sector organization with which information is shared.

For each interface with a system outside VA, state what specific data elements (PII/PHI) are shared with each specific partner.

What legal mechanisms, authoritative agreements, documentation, or policies are in place detailing the extent of the sharing and the duties of each party? For example, is the sharing of data compatible with your SORN? Then list the SORN and the applicable routine use from the SORN. Is there a Memorandum of Understanding (MOU), Computer Matching Agreement (CMA), or law that mandates the sharing of this information?

Describe how the information is transmitted to entities external to VA and what security measures have been taken to protect it during transmission.

This question is related to privacy control UL-2, Information Sharing with Third Parties

Data Shared with External Organizations

<table>
<thead>
<tr>
<th>List External Program Office or IT System information is shared/received with</th>
<th>List the purpose of information being shared / received / transmitted with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program or IT system</th>
<th>List the legal authority, binding agreement, SORN routine use, etc. that permit external sharing (can be more than one)</th>
<th>List the method of transmission and the measures in place to secure data</th>
</tr>
</thead>
<tbody>
<tr>
<td>N/A</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

5.2 PRIVACY IMPACT ASSESSMENT: External sharing and disclosure

Discuss the privacy risks associated with the sharing of information outside the Department and what steps, if any, are currently being taken to mitigate those identified risks.

If no External Sharing listed on the table above, (State there is no external sharing in both the risk and mitigation fields).
Discuss whether access controls have been implemented and whether audit logs are regularly reviewed to ensure appropriate sharing outside of the Department. For example, is there a Memorandum of Understanding (MOU), contract, or agreement in place with outside agencies or foreign governments. Discuss how the sharing of information outside of the Department is compatible with the stated purpose and use of the original collection. This question is related to privacy control AR-2, Privacy Impact and Risk Assessment, AR-3, Privacy Requirements for Contractors and Service Providers, and AR-4, Privacy Monitoring and Auditing.

Follow the format below:

**Privacy Risk:** This system does not share/disclose data externally.

**Mitigation:** This system does not share/disclose data externally.

Section 6. Notice

The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information.

**6.1 Was notice provided to the individual before collection of the information?** If yes, please provide a copy of the notice as an Appendix-A 6.1 on the last page of the document. Also provide notice given to individuals by the source system (A notice may include a posted privacy policy, a Privacy Act notice on forms, or a system of records notice published in the Federal Register.) If notice was not provided, why not? These questions are related to privacy control TR-1, Privacy Notice, and TR-2, System of Records Notices and Privacy Act Statements, and TR-3, Dissemination of Privacy Program Information.

6.1a This question is directed at the notice provided before collection of the information. This refers to whether the person is aware that his or her information is going to be collected. A notice may include a posted privacy policy, a Privacy Act statement on forms, or a SORN published in the Federal Register, Notice of Privacy Practice provided to individuals for VHA systems. If notice was provided in the Federal Register, provide the citation.

Users access to the system is optional within the VA so there will be no advanced notice related to the collection of PII. If a user decides to create an account, the user will be asked to enter in their name and email. It’s at the point of account creation a user can decide to account creation process. Privacy notice for WebEX provided on the log in page, see appendix A of this PIA.

6.1b If notice was not provided, explain why. If it was provided, attach a copy of the current notice.

Notice is provided to all veterans in an annual basis or in the VA.gov website. Therefore, no additional notice is provided.
6.1c Describe how the notice provided for the collection of information is adequate to inform those affected by the system that their information has been collected and is being used appropriately. Provide information on any notice provided on forms or on Web sites associated with the collection.

Only Name and VA email address is collected from internal users, who are aware of the user of their name and VA email for authentication purposes. Webex does not collect or store PII from external users.

6.2 Do individuals have the opportunity and right to decline to provide information? If so, is a penalty or denial of service attached?

This question is directed at whether the person from or about whom information is collected can decline to provide the information and if so, whether a penalty or denial of service is attached. This question is related to privacy control IP-1, Consent, IP-2, Individual Access, and IP-3, Redress.

Use of the Webex service is optional within the VA and individuals may decline to provide information without penalty or denial of service.

6.3 Do individuals have the right to consent to particular uses of the information? If so, how does the individual exercise the right?

This question is directed at whether an individual may provide consent for specific uses, or the consent is given to cover all uses (current or potential) of his or her information. If specific consent is required, how would the individual consent to each use? This question is related to privacy control IP-1, Consent.

Use of the Webex service is optional within the VA and individuals may decline to provide information.

6.4 PRIVACY IMPACT ASSESSMENT: Notice

Describe the potential risks associated with potentially insufficient notice and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

Principle of Transparency: Has sufficient notice been provided to the individual?

Principle of Use Limitation: Is the information used only for the purpose for which notice was provided either directly to the individual or through a public notice? What procedures are in place to ensure that information is used only for the purpose articulated in the notice?

This question is related to privacy control TR-1, Privacy Notice, AR-2, Privacy Impact and Risk Assessment, and UL-1, Internal Use.

Follow the format below:

Privacy Risk: Risk that individual is unaware that their information is being collected by the system.
**Mitigation:** Use of the Webex service is optional within the VA and individuals may decline to provide information. If a meeting is recorded, then visual and audio message is displayed.

7. Access, Redress, and Correction

The following questions are directed at an individual’s ability to ensure the accuracy of the information collected about him or her.

7.1 What are the procedures that allow individuals to gain access to their information?

These questions are related to privacy control IP-2, Individual Access, and AR-8, Accounting of Disclosures.

7.1a Cite any procedures or regulations your program has in place that allow access to information. These procedures, at a minimum, should include the agency’s FOIA/Privacy Act practices, but may also include additional access provisions. For example, if your program has a customer satisfaction unit, that information, along with phone and email contact information, should be listed in this section in addition to the agency’s procedures. See 5 CFR 294 and the VA FOIA Web page at http://www.foia.va.gov/ to obtain information about FOIA points of contact and information about agency FOIA processes.

Use of the Webex service is optional within the VA. If an individual decides to use the system, they will be provided the authorized URL approved and located within the Technical Reference Model (TRM) system. Once the account is created an individual may access their information by following the link and logging into the application. Once authenticated and authorized access the individual may go to account preferences and view their Name and E-mail.

7.1b If the system is exempt from the access provisions of the Privacy Act, please explain the basis for the exemption or cite the source where this explanation may be found, for example, a Final Rule published in the Code of Federal Regulations (CFR)?

System is not exempt from the access provisions of the Privacy Act.

7.1c If the system is not a Privacy Act system, please explain what procedures and regulations are in place that covers an individual gaining access to his or her information?

Once the account is created an individual may access their information by following the link and logging into the application. Once authenticated and authorized access the individual may go to account preferences and view their Name and E-mail.

7.2 What are the procedures for correcting inaccurate or erroneous information?

Describe the procedures and provide contact information for the appropriate person to whom such issues should be addressed? If the correction procedures are the same as those given in question 7.1, state as much. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.
Veteran/dependent personal emails are not stored in the system. The initial email to attend a meeting will kick back immediately to be corrected. Meeting organizer will correct the email or contact the Veteran/dependent. Any recorded information can be corrected by contacting the meeting organizer.

7.3 How are individuals notified of the procedures for correcting their information?

How are individuals made aware of the procedures for correcting his or her information? This may be through notice at collection or other similar means. This question is meant to address the risk that even if procedures exist to correct information, if an individual is not made fully aware of the existence of those procedures, then the benefits of the procedures are significantly weakened. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

For internal users - A usage document is created and available for download. https://dvagov.sharepoint.com/sites/OITUCIS/webex/SitePages/WebEx.aspx.

For external users – Can reach out to meeting organizer to correct information provided during the meeting. WebEx does not retain external user information.

7.4 If no formal redress is provided, what alternatives are available to the individual?

Redress is the process by which an individual gains access to his or her records and seeks corrections or amendments to those records. Redress may be provided through the Privacy Act and Freedom of Information Act (FOIA), and also by other processes specific to a program, system, or group of systems. Example: Some projects allow users to directly access and correct/update their information online. This helps ensure data accuracy.

This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

For internal users: Incorrect name and VA email addresses would be rejected during authentication process therefore, no corrections or amendments are required.

For external users: Veteran/dependent personal emails are not retained or maintained. The initial email to attend a meeting will kick back immediately to be corrected. Meeting organizer will correct the email or contact the Veteran/dependent.

7.5 PRIVACY IMPACT ASSESSMENT: Access, redress, and correction

Discuss what risks there currently are related to the Department’s access, redress, and correction policies and procedures for this system and what, if any, steps have been taken to mitigate those risks. For example, if a project does not allow individual access, the risk of inaccurate data needs to be discussed in light of the purpose of the project. For example, providing access to ongoing law enforcement activities could negatively impact the program’s effectiveness because the individuals involved might change their behavior. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

Principle of Individual Participation: Is the individual provided with the ability to find out whether a project maintains a record relating to him?

Principle of Individual Participation: If access and/or correction is denied, then is the individual provided notice as to why the denial was made and how to challenge such a denial?
**Principle of Individual Participation:** Is there a mechanism by which an individual is able to prevent information about him obtained for one purpose from being used for other purposes without his knowledge?

*This question is related to privacy control IP-3, Redress.*

Follow the format below:

**Privacy Risk:** Whomever organized the meeting used the incorrect data elements.

**Mitigation:** Veteran/dependent personal emails are not stored or maintained, the initial email to attend a meeting will kick back immediately to be corrected. Meeting organizer will correct the email or contact the Veteran/dependent.

### Section 8. Technical Access and Security

The following questions are intended to describe technical safeguards and security measures.

#### 8.1 What procedures are in place to determine which users may access the system, and are they documented?

*These questions are related to privacy control AR-7, Privacy-Enhanced System Design and Development.*

8.1a **Describe the process by which an individual receives access to the system?**

All VA users have the ability to create an account on the Webex managed service platform. If you do not have a VA Lightweight Directory Access Protocol (LDAP) account, you will not be able to create an account on the Webex manager service platform. User access is documented and maintained through LDAP and Active Directory Federation Services (ADFS) logins and follow LDAP security policy for authentication and logging events.

8.1b **Identify users from other agencies who may have access to the system and under what roles these individuals have access to the system. Who establishes the criteria for what PII can be shared?**

Only VA employees may access the system.

8.1c **Describe the different roles in general terms that have been created to provide access to the system? For example, certain users may have "read-only" access while others may be permitted to make certain amendments or changes to the information.**

Only VA employee may access the system. All VA users can create an account on the Webex managed service platform. If you do not have a VA Lightweight Directory Access Protocol (LDAP) account, you will not be able to create an account on the Webex manager service platform. User access is documented and maintained through LDAP and Active Directory Federation Services (ADFS) logins and follow LDAP security policy for authentication and logging events. Once a user clears the VA and the LDAP account is deleted, the account on the Webex platform will automatically be deleted from the
managed service platform. There will not be any elevated privilege to the system granted to VA employees.

8.2 Will VA contractors have access to the system and the PII? If yes, what involvement will contractors have with the design and maintenance of the system? Has a contractor confidentiality agreement, Business Associate Agreement (BAA), or a Non-Disclosure Agreement (NDA) been developed for contractors who work on the system?

If so, how frequently are contracts reviewed and by whom? Describe the necessity of the access provided to contractors to the system and whether clearance is required. If Privacy Roles and Responsibilities have been established to restrict certain users to different access levels, please describe the roles and associated access levels. Explain the need for VA contractors to have access to the PII. This question is related to privacy control AR-3, Privacy Requirements for Contractors, and Service Providers.

VA Contractors will not be given access to “Host” meetings from the VA provided Webex solution.

Contractors will be able to participate in meetings and will only be able to see the current participant list which only includes the name of the participant.

8.3 Describe what privacy training is provided to users either generally or specifically relevant to the program or system?

VA offers privacy and security training. Each program or system may offer training specific to the program or system that touches on information handling procedures and sensitivity of information. Please describe how individuals who have access to PII are trained to handle it appropriately. This question is related to privacy control AR-5, Privacy Awareness and Training.

Personnel that will be accessing information systems must read and acknowledge their receipt and acceptance of the VA National Rules of Behavior (ROB) or VA Contractor’s ROB prior to gaining access to any VA information system or sensitive information. The rules are included as part of the security awareness training which all personnel must complete via the VAs Talent Management System (TMS). After the user’s initial acceptance of the Rules, the user must re-affirm their acceptance annually as part of the security awareness training. Acceptance is obtained via electronic acknowledgment and is tracked through the TMS system.

8.4 Has Authorization and Accreditation (A&A) been completed for the system?

8.4a If Yes, provide:

1. The Security Plan Status: Approved
2. The System Security Plan Status Date: 04/10/2023
4. The Authorization Date: 4/10/202
5. The Authorization Termination Date: 4/09/2024
6. The Risk Review Completion Date: 04/07/2023
7. The FIPS 199 classification of the system (LOW/MODERATE/HIGH): Moderate
Please note that all systems containing SPI are categorized at a minimum level of “moderate” under Federal Information Processing Standards Publication 199.

8.4b If No or In Process, provide your Initial Operating Capability (IOC) date.

Section 9 – Technology Usage
The following questions are used to identify the technologies being used by the IT system or project.

9.1 Does the system use cloud technology? If so, what cloud model is being utilized?
If so, Does the system have a FedRAMP provisional or agency authorization? If the system does use cloud technology, but does not have FedRAMP authorization, explain how the Cloud Service Provider (CSP) solution was assessed and what FedRAMP documents and processes were used for the assessment in order to comply with VA Handbook 6517. Types of cloud models include: Software as a Service (SaaS), Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Commercial off the Shelf (COTS), Desktop as a Service (DaaS), Mobile Backend as a Service (MBaaS), Information Technology Management as a Service (ITMaaS). This question is related to privacy control UL-1. Information Sharing with Third Parties. Note: For systems utilizing the VA Enterprise Cloud (VAEC), no further responses are required after 9.1. (Refer to question 3.3.1 of the PTA)
Yes, this system is FedRAMP authorized and use Software as a Service as could model.

9.2 Does the contract with the Cloud Service Provider, Contractors and VA customers establish who has ownership rights over data including PII? (Provide contract number and supporting information about PII/PHI from the contract). (Refer to question 3.3.2 of the PTA) This question is related to privacy control AR-3, Privacy Requirements for Contractors, and Service Providers.
VA retain the ownership right over all data including PII. This solution is not intend to be used to share or discuss any VA sensitive data (PII/PHI)

9.3 Will the CSP collect any ancillary data and if so, who has ownership over the ancillary data?
Per NIST 800-144, cloud providers hold significant details about the accounts of cloud consumers that could be compromised and used in subsequent attacks. Ancillary data also involves information the cloud provider collects or produces about customer-related activity in the cloud. It includes data collected to meter and charge for consumption of resources, logs and audit trials, and other such metadata that is generated and accumulated within the cloud environment. This question is related to privacy control DI-1, Data Quality.

Webex do not collect any ancillary data.

9.4 NIST 800-144 states, “Organizations are ultimately accountable for the security and privacy of data held by a cloud provider on their behalf.” Is this principle described in contracts with customers? Why or why not?
What are the roles and responsibilities involved between the organization and cloud provider, particularly with respect to managing risks and ensuring organizational requirements are met?
This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

This principle is included in the contract with Webex. VA 6500.6 Contract Security Appendix B and C are included as a part of the contract.

9.5 If the system is utilizing Robotics Process Automation (RPA), please describe the role of the bots. 

Robotic Process Automation is the use of software scripts to perform tasks as an automated process that executes in parallel with or in place of human input. For example, will the automation move or touch PII/PHI information. RPA may also be referred to as “Bots” or Artificial Intelligence (AI).

The system does not use Robotics Process Automation (RPA).
