Abstract

The abstract provides the simplest explanation for “what does the system do?”

The Enterprise Event Bus (EEB) is an asynchronous event processing system spanning systems and lines of business at the VA that allows producers to publish business events based on data changes and consumers to subscribe to those events. The system uses Kafka as its core event streaming platform, with AWS MSK (Managed Streaming for Apache Kafka) as the management layer.

The overview is the most important section of the PIA. A thorough and clear overview gives the reader the appropriate context to understand the responses in the PIA. The overview should contain the following elements:

1  General Description
   A. What is the IT system name and the name of the program office that owns the IT system?
      The Enterprise Event Bus (EEB) is part of the Veteran Experience Services (VES) portfolio.

   B. What is the business purpose of the program, IT system, or technology and how it relates to the program office and agency mission?
      This system will reduce the complexity that is currently inherent in the direct coupling between VA systems that need to (or would benefit from) sharing data. With the Event Bus approach, event producers don't need to have direct connections with event consumers, and multiple event consumers may receive and act on a single event, i.e., it's not just an asynchronous queue sitting between a single producer and consumer. It should be noted that the Enterprise Event Bus is not intended to subsume or replace any existing API or event-driven ecosystems; its focus is to provide access to events from existing systems that are of interest to a wider audience by filtering, enriching, or transforming the event payload to make it easier for other systems to work with.

   C. Who is the owner or control of the IT system or project?
      Veteran Experience Services (VES)

2. Information Collection and Sharing

   D. What is the expected number of individuals whose information is stored in the system and a brief description of the typical client or affected individual?
      An average of ~3,000 events per day. Each event contains data for a Veteran or dependent who has a new claim decision letter to review, and data for VA personnel who make changes to the status of the claim decision letter.

   E. What is a general description of the information in the IT system and the purpose for collecting this information?
The Enterprise Event Bus does not directly collect any information. As a system of transport, it acts as conduit through which information collected by VA systems can be more efficiently shared with other VA systems.

F. What information sharing conducted by the IT system? A general description of the modules and subsystems, where relevant, and their functions.

Apache Kafka (the Enterprise Event Bus system) acts as a broker for data between systems that produce event data and systems that consumes event data.

G. Is the system is operated in more than one site, and if so, a description of how use of the system and PII is maintained consistently in all sites and if the same controls are used across sites?

No.

3. Legal Authority and SORN

H. What is the citation of the legal authority to operate the IT system?

The legal authorities to operate the system are 38 U.S.C. 7601-7604 and U.S.C 7681-7683. The system will be covered under the AWS-GovCloud ATO as a Moderate Impact system. (a) Title 40 U.S.C. § 1401 (3), Clinger-Cohen Act of 1996, which directs the development and maintenance of IT architectures by federal agencies to maximize benefits within the federal government (b) Government Performance and Results Act of 1993, designed to improve federal program effectiveness, enhance Congressional decision-making, and strengthen internal controls.

I. If the system is in the process of being modified and a SORN exists, will the SORN require amendment or revision and approval? If the system is using cloud technology, does the SORN for the system cover cloud usage or storage?

There is no SORN for this system.

4. System Changes

J. Will the completion of this PIA will result in circumstances that require changes to business processes?

No. There were no findings from the PTA that required a change to how the system operates.

K. Will the completion of this PIA could potentially result in technology changes?

No. There were no findings from the PTA that required technology changes.

Section 1. Characterization of the Information

The following questions are intended to define the scope of the information requested and collected as well as the reasons for its collection as part of the program, IT system, or technology being developed.

1.1 What information is collected, used, disseminated, created, or maintained in the system?

Identify and list all Sensitive Personal Information (SPI) that is collected and stored in the system, including Individually Identifiable Information (III), Individually Identifiable Health Information (IIHI),
Protected Health Information (PHI), and Privacy-Protected Information. For additional information on these information types and definitions, please see VA Directives and Handbooks in the 6500 series (https://www.va.gov/vapubs/). If the system creates information (for example, a score, analysis, or report), list the information the system is responsible for creating.

If a requesting system receives information from another system, such as a response to a background check, describe what information is returned to the requesting system. This question is related to privacy control AP-1, Authority To Collect, and AP-2, Purpose Specification.

The information selected below must match the information provided in question 2.1 as well as the data elements columns in 4.1 and 5.1. It must also match the information provided in question 3.4 of the PTA.

Please check any information listed below that your system collects, uses, disseminates, creates, or maintains. If additional SPI is collected, used, disseminated, created, or maintained, please list those in the text box below:

- Name
- Social Security Number
- Date of Birth
- Mother’s Maiden Name
- Personal Mailing Address
- Personal Phone Number(s)
- Personal Fax Number
- Personal Email Address
- Emergency Contact Information (Name, Phone Number, etc. of a different individual)
- Financial Information
- Health Insurance Beneficiary Numbers
- Account numbers
- Certificate/License numbers\(^1\)
- Vehicle License Plate Number
- Internet Protocol (IP) Address Numbers
- Medications
- Medical Records
- Race/Ethnicity
- Tax Identification Number
- Medical Record Number
- Gender
- Integrated Control Number (ICN)
- Military History/Service Connection
- Next of Kin
- Other Data Elements (list below)

Other PII/PHI data elements:
Data elements from the ClaimLifecycleStatusUpdatedEvent: **Note these data elements uniquely identify individuals and are used routinely.**
ActUserID
- CaseId
- ClaimId
- ClaimantParticipantId
- StatusChangedByParticipantId
- VeteranParticipantId

**PII Mapping of Components (Servers/Database)**

\(^1\) *Specify type of Certificate or License Number (e.g., Occupational, Education, Medical)*
The **Enterprise Event Bus (EEB)** consists of **one** key components (application). Each component has been analyzed to determine if any elements of that component collect PII. The type of PII collected by the **Enterprise Event Bus (EEB)** and the reasons for the collection of the PII are in the table below.

**Note:** Due to the PIA being a public facing document, please do not include server names in the table. The first table of 3.9 in the PTA should be used to answer this question.

### Internal Components Table

<table>
<thead>
<tr>
<th>Component Name (Database, Instances, Application, Software, Application Program Interface (API) etc.) that contains PII/PHI</th>
<th>Does this system collect PII? (Yes/No)</th>
<th>Does this system store PII? (Yes/No)</th>
<th>Type of PII (SSN, DOB, etc.)</th>
<th>Reason for Collection/Storage of PII</th>
<th>Safeguards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apache Kafka (the Enterprise Event Bus system)</td>
<td>Yes</td>
<td>Yes; PII data is retained for a period of no longer than seven days.</td>
<td>ClaimLifecycleStatusUpdatedEvent: • ActorUserId • CaseId • ClaimId • ClaimantParticipantId • StatusChangedByParticipantId • VeteranParticipantId</td>
<td>The Enterprise Event Bus functions as a conduit for collecting event data from producer systems and then making it available to consumer systems that subscribe to specific event topics.</td>
<td>Data is encrypted at both rest and transit. Access is gated behind authorization and authentication principles of least privilege. Only system-to-system connections are permitted. The Enterprise Event Bus’s Apache Kafka instance uses AWS MSK managed hosting (upgrades and security patches managed by AWS.)</td>
</tr>
</tbody>
</table>

### 1.2 What are the sources of the information in the system?

*These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.*
1.2a List the individual, entity, or entities providing the specific information identified above. For example, is the information collected directly from the individual as part of an application for a benefit, or is it collected from other sources such as commercial data aggregators?

The Enterprise Event Bus does not collect any information directly from any individuals, it only works with data that already exists within VA systems. Data included in the ClaimLifecycleStatusUpdatedEvent event listed above is produced by the Benefits Integration Platform (BIP) Kafka cluster. BIP has made the ClaimLifecycleStatusUpdatedEvent event available in their dev, staging, and production environments. The data for the BIP event is consumed from two Corp DB tables: Benefit Claim Lifecycle Status (BNFT_CLAIM_LC_STATUS) and Benefit Claim (BNFT_CLAIM).

1.2b Describe why information from sources other than the individual is required? For example, if a program’s system is using data from a commercial aggregator of information or data taken from public Web sites, state the fact that this is where the information is coming from and then in question indicate why the system is using this source of data.

The Enterprise Event Bus does not directly collect any information from any source, it only works with data that already exists within VA systems.

1.2c Does the system create information (for example, a score, analysis, or report), list the system as a source of information?

The system does not create any information; it only moves information from one system to another.

1.3 How is the information collected?

These questions are related to privacy controls DI-1, Data Quality, and IP-1, Consent.

1.3a This question is directed at the means of collection from the sources listed in question 1.2. Information may be collected directly from an individual, received via electronic transmission from another system, or created by the system itself. Specifically, is information collected through technologies or other technologies used in the storage or transmission of information in identifiable form?

The Enterprise Event bus subscribes to an event stream from the Benefits Integration Platform (BIP).

1.3b If the information is collected on a form and is subject to the Paperwork Reduction Act, what is the form’s OMB control number and the agency form number?

The Enterprise Event bus does not collect information on a form. 

1.4 How will the information be checked for accuracy? How often will it be checked?

These questions are related to privacy controls DI-1, Data Quality, and DI-2, Data Integrity and Integrity Board.

1.4a Discuss whether and how often information stored in the system is checked for accuracy. Is information in the system checked against any other source of information (within or outside your organization) before the information is used to make decisions about an individual? For example, is
there a computer matching agreement in place with another government agency? For systems that receive data from internal data sources or VA IT systems, describe the system checks to ensure that data corruption has not occurred during transmission.

Apache Kafka, the technology that underpins the Enterprise Event Bus, provides delivery guarantees that producing systems can leverage to ensure data is correctly pushed into the Event Bus system. The configuration that will be applied to the data stream will be selected based on the needs of that system and the nature of the data stream. For data streams which can tolerate the risk of duplicate messages, at-least-once delivery will be selected; with this configuration, the push of data is not considered complete until the Event Bus system has acknowledged that the event has been received – triggering retries in the event of failures. For data streams which cannot tolerate duplicate messages, the stream can be configured for exactly once delivery. With this configuration option, the system assigns each event a unique sequence number based on the data and producer. The stream will only accept the push if this number is unique, and the write will not be considered complete until the Event Bus system has acknowledged that the event has been received. Of note, the Enterprise Event Bus is not to be considered an authoritative data source and data streams are not intended for long-term storage of data.

1.4b Does the system check for accuracy by accessing a commercial aggregator of information, describe this process and the levels of accuracy required by the contract?

The Enterprise Event Bus does not access any commercial aggregators of information.

1.5 What specific legal authorities, arrangements, and agreements defined the collection of information?

List the full legal authority for operating the system, specifically the authority to collect the information listed in question 1.1. Provide the authorities in a manner understandable to any potential reader, i.e., do not simply provide a legal citation, use statute names or regulations in addition to citations. Legal authorities include Federal laws, regulations, statutes, and Executive Orders. This question is related to privacy control AP-1, Authority to Collect

The legal authorities to operate the system are 38 U.S.C. 7601-7604 and U.S.C 7681-7683. The system will be covered under the AWS-GovCloud ATO as a Moderate Impact system. (a) Title 40 U.S.C. § 1401 (3), Clinger-Cohen Act of 1996, which directs the development and maintenance of IT architectures by federal agencies to maximize benefits within the federal government (b) Government Performance and Results Act of 1993, designed to improve federal program effectiveness, enhance Congressional decision-making, and strengthen internal controls.

1.6 PRIVACY IMPACT ASSESSMENT: Characterization of the information
Consider the specific data elements collected and discuss the potential privacy risks and what steps, if any are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete this section)

Consider the following Fair Information Practice Principles (FIPPs) when assessing the risk to individual privacy:
Principle of Purpose Specification: Explain how the collection ties with the purpose of the underlying mission of the organization and its enabling authority.

Principle of Minimization: Is the information directly relevant and necessary to accomplish the specific purposes of the program?

Principle of Individual Participation: Does the program, to the extent possible and practical, collect information directly from the individual?

Principle of Data Quality and Integrity: Are there policies and procedures for VA to ensure that personally identifiable information is accurate, complete, and current? This question is related to privacy control AR-1, Governance and Privacy Program, and AR-2, Privacy Impact and Risk Assessment.

Follow the format below when entering your risk assessment:

Privacy Risk: The system transports PII of Veterans, dependents, and VA employees who update the status of a Veteran or dependent claim status, from one internal VA system to another. The system does not directly collect data from any individual, and thus does not provide any policies and procedures to ensure that personally identifiable information is accurate, complete, and current.

If Event Bus information was breached or accidentally disclosed to inappropriate parties or the public, limited claims data for an individual could be exposed. For claims data, this could potentially include unique identifiers for the Veteran or dependent, unique identifiers for VA employees, a unique identifier for a claim, and some basic information about the claim.

Mitigation: The Enterprise Event Bus follows best practices regarding encrypting data in transit and at rest throughout our system. The system is located on the VA network and can only be accessed by other internal VA systems. When considering which information passes through the system, we seek to minimize sensitive data. Individuals are not permitted direct access to the data that passes through the Event Bus, as the Event Bus is intended for system-to-system transit of data. These systems follow the principles of least privilege, which means that each system is only allowed to access a specific subset of the data as deemed necessary for their functionality.

In the event of a security incident resulting from a misconfiguration in permissions, members of the Enterprise Event Bus Administrative team are trained to respond to security incidents in accordance with VA best practices defined in VA Privacy and Information Security Awareness TMS training.

Section 2. Uses of the Information

The following questions are intended to clearly delineate the use of information and the accuracy of the data being used.

2.1 Describe how the information in the system that will be used in support of the program’s business purpose.
The claim Decision Letter Availability event information will eventually be made available for use by a subscribing consumer system to trigger VANotify to send an email notification to a Veteran, informing them that their decision letter is available to view in the Claim Status Tool.

Identify and list each use (both internal and external to VA) of the information collected or maintained. This question is related to privacy control AP-2, Purpose Specification.

<table>
<thead>
<tr>
<th>PII/PHI Data Element</th>
<th>Internal Use</th>
<th>External Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>ActorUserId</td>
<td>VA personnel user id</td>
<td>Not used</td>

</tbody>
</table>

2.2 What types of tools are used to analyze data and what type of data may be produced?
These questions are related to privacy controls DI-1, Data Quality, DI-2, Data Integrity and Integrity Board, and SE-1, Inventory of Personally Identifiable Information.

2.2a Many systems sift through large amounts of information in response to a user inquiry or programmed functions. Systems may help identify areas that were previously not obvious and need additional research by agents, analysts, or other employees. Some systems perform complex analytical tasks resulting in, among other types of data, matching, relational analysis, scoring, reporting, or pattern analysis. Describe any type of analysis the system conducts and the data that is created from the analysis?

The Enterprise Event Bus does not perform complex meta-analysis on the data that we ingest. When events in the Benefits Integration Platform stream for the ClaimLifecycleStatusUpdated event are either Authorized or Continued at Authorization and the ClaimTypeCode starts with 01, 02, 03, 04, 08, 11, 12, 17, 18 or 40, our system generates a Decision Letter Availability event.

2.2b If the system creates or makes available new or previously unutilized information about an individual, explain what will be done with the newly derived information. Will it be placed in the individual's existing record? Will a new record be created? Will any action be taken against or for the individual identified because of the newly derived data? If a new record is created, will the newly created information be accessible to Government employees who make determinations about the individual? If so, explain fully under which circumstances and by whom that information will be used.
The Enterprise Event Bus only works with existing (internal to VA) data that is currently utilized by one or more systems. The system does not create or make available any new information about individuals.

### 2.3 How is the information in the system secured?

These questions are related to security and privacy controls SC-9, Transmission Confidentiality, and SC-28, Protection of Information at Rest.

#### 2.3a What measures are in place to protect data in transit and at rest?

The Enterprise Event Bus leverages the encryption features provided by Amazon MSK to encrypt data at rest and in transit. We only allow encrypted data in and out of our cluster; any system that produces or consumes our data streams must connect via `SASL_SSL`. (For more information, please see the Amazon MSK documentation at https://docs.aws.amazon.com/msk/latest/developerguide/msk-encryption.html.)

#### 2.3b If the system is collecting, processing, or retaining Social Security Numbers, are there additional protections in place to protect SSNs?

The system does not collect, process, or retain Social Security numbers.

#### 2.3c How is PII/PHI safeguarded in accordance with OMB Memorandum M-06-15?

In accordance with OMB Memorandum M-06-15, the Enterprise Event Bus provides end-to-end encryption for all PHI/PII passing through the system. The event streams are flushed when the retention period for an event expires (after seven days), preventing data from being stored long-term on the system. The system has implemented fine-grained authorization, allowing administrators to limit the data that other VA systems are allowed to access to only that which are determined to be necessary for their business process. Additionally, the system seeks to minimize the amount of PHI/PII it collects. The Event Bus’s internal guidelines for handling PII and PHI and the implications of working with this data are available in our internal documentation at https://github.com/department-of-veterans-affairs/VES/blob/master/research/Event%20Bus/Engineering/PII%20and%20PHI%20Security%20Implications.md.

### 2.4 PRIVACY IMPACT ASSESSMENT: Use of the information.

Describe any types of controls that may be in place to ensure that information is handled in accordance with the uses described above. Example: Describe if training for users of the project covers how to appropriately use information. Describe the disciplinary programs or system controls (i.e. denial of access) that are in place if an individual is inappropriately using the information.

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Is the PIA and SORN, if applicable, clear about the uses of the information?
Principle of Use Limitation: Is the use of information contained in the system relevant to the mission of the project?
This question is related to privacy control AR-4, Privacy Monitoring and Auditing, AR-5, Privacy Awareness and Training, and SE-2, Privacy Incident response.

2.4a How is access to the PII determined?
Before a system is given access to a data stream, a meeting between the team supporting a prospective Event Bus producer or consumer system and the Enterprise Event Bus administrative team must occur. The onboarding team must outline the information that they require and provide a justification for access. The Enterprise Event Bus is only available to connect with VA internal systems. After this initial review of access, the Enterprise Event Bus Administrative team creates a request to create the IAM (Identity and Access Management) policy that will be approved and applied by a member of the Lighthouse Delivery Infrastructure team. IAM is an AWS service that Apache Kafka uses for granting permissions to access the Event Bus. The Lighthouse Delivery Infrastructure provides the underlaying AWS accounts. In addition to the process described above, access to production data will require that the team obtain their own Authority to Operate (ATO). Enterprise Event Bus Team administrators do not have direct access to PII or PHI but can modify who has access to this data, but they have access to administrative tools that can modify access to user permissions for accessing data. These individuals must undergo mandatory annual online information security and HIPAA training via the VA Talent Management System (TMS). Regular audits of individuals with this role will be performed to ensure that only active team members have access to modify permissions on the enterprise event bus system.

2.4b Are criteria, procedures, controls, and responsibilities regarding access documented?

2.4c Does access require manager approval?
Access requires approval from both the Event Bus Administrative team leadership and the Lighthouse Delivery Infrastructure team. Lighthouse Delivery Infrastructure is only approving network access to the Event Bus system. No data element in 1.1 is shared with Lighthouse Delivery Infrastructure.

2.4d Is access to the PII being monitored, tracked, or recorded?
The Enterprise Event Bus Administrative team does not have direct access to modify access control policies and must make these changes through Terraform. In addition to the internal logs of changes kept by AWS, all changes that are made to these access policies, including the individual who submitted and approved them, are recorded via GitHub. The Enterprise Event Bus system does not monitor what consuming systems do with the data once they have subscribed to the topic. These systems are subject to their own PIA reviews to ensure best practices are followed.

2.4e Who is responsible for assuring safeguards for the PII?

Event Bus Team Administrators are responsible for submitting requests for access and performing audits to remove access for offboarded teams. The Lighthouse Delivery Infrastructure team is responsible for creating the policies that systems leverage to access sensitive data, as described in this authorization and authentication document: https://github.com/department-of-veterans-affairs/VES/blob/master/research/Event%20Bus/Engineering/ADR/ADR%20MSK%20Authenti cation%20and%20Authorization.md. Any changes to the way that data is handled internally on the Event Bus system is subjected to code review and must be technically vetted by the Event Bus engineering team prior to being incorporated into the project.

Section 3. Retention of Information

The following questions are intended to outline how long information will be retained after the initial collection.

3.1 What information is retained?

Identify and list all information collected from question 1.1 that is retained by the system. This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.

All information listed in 1.1 is retained in the relevant events in the Kafka instance for a period of no longer than seven days. See this Event Retention discussion for more details: https://github.com/department-of-veterans-affairs/VES/blob/master/research/Event%20Bus/Engineering/ADR/ADR%20event%20design.md#event-retention.

3.2 How long is information retained?

In some cases, VA may choose to retain files in active status and archive them after a certain period of time. State active file retention periods, as well as archived records, in number of years, for the information and record types. For example, financial data held within your system may have a different retention period than medical records or education records held within your system, please be sure to list each of these retention periods. The VA records officer should be consulted early in the development process to ensure that appropriate retention and destruction schedules are implemented. If the system is using cloud technology, will it be following the NARA approved...
retention length and schedule? This question is related to privacy control DM-2, Data Retention and Disposal.

Events that include information listed in 1.1 are retained for a default period of no longer than seven days in the Kafka instance. This should provide adequate time for any consuming systems to pick up the event. See this Event Retention discussion for more details: https://github.com/department-of-veterans-affairs/ves/blob/master/research/Event%20Bus/Engineering/ADR/ADR%20event%20design.md#event-retention.

3.3 Has the retention schedule been approved by the VA records office and the National Archives and Records Administration (NARA)?

An approved records schedule must be obtained for any IT system that allows the retrieval of a record via a personal identifier. The VA records officer will assist in providing a proposed schedule. The schedule must be formally offered to NARA for official approval. Once NARA approves the proposed schedule, the VA records officer will notify the system owner. Please work with the system Privacy Officer and VA Records Officer to answer these questions. This question is related to privacy control DM-2, Data Retention and Disposal.

3.3a Are all records stored within the system of record indicated on an approved disposition authority?

The Event Bus system does not create or store any records in a system of record. It is only passing a stream of messages from one system to another and does not retrieve any individual records based on a specific personal identifier.

3.3b Please indicate each records retention schedule, series, and disposition authority?

The Event Bus system does not create or store any records in a system of record.

3.4 What are the procedures for the elimination or transfer of SPI?

Explain how records are destroyed, eliminated or transferred to NARA at the end of their mandatory retention period. Please give the details of the process. For example, are paper records shredded on site, or by a shredding company and accompanied by a certificate of destruction, etc.? This question is related to privacy control DM-2, Data Retention and Disposal.

The Event Bus system does not create or store any records in a system of record.

3.5 Does the system, where feasible, use techniques to minimize the risk to privacy by using PII for research, testing, or training?

Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. These uses of PII increase the risks associated with the unauthorized disclosure or misuse of the information. Please explain what controls have been implemented to protect PII used for testing, training and research. This question is related to privacy control DM-3, Minimization of PII Used in Testing, Training and Research.
The Enterprise Event Bus does not use PII for testing, training, or research. Data used in lower environments, such as development, is mocked.

3.6 PRIVACY IMPACT ASSESSMENT: Retention of information

Discuss the risks associated with the length of time data is retained and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

While we understand that establishing retention periods for records is a formal process, there are policy considerations behind how long a project keeps information. The longer a project retains information, the longer it needs to secure the information and assure its accuracy and integrity. The proposed schedule should match the requirements of the Privacy Act to keep the minimum amount of PII for the minimum amount of time, while meeting the Federal Records Act. The schedule should align with the stated purpose and mission of the system.

Consider the following FIPPs below to assist in providing a response:

**Principle of Minimization:** Does the project retain only the information necessary for its purpose? Is the PII retained only for as long as necessary and relevant to fulfill the specified purposes?

**Principle of Data Quality and Integrity:** Has the PIA described policies and procedures for how PII that is no longer relevant and necessary is purged?

*This question is related to privacy controls DM-1, Minimization of Personally Identifiable Information, and DM-2, Data Retention and Disposal.*

Follow the format below:

**Privacy Risk:** Data persists on the event stream for seven days. The data stream records are stored in an underlying file system. Whenever data is persisted there is risk that it could be accessed during a breach.

**Mitigation:** Systems can only access the data stream through Kafka. Data is encrypted throughout all stages of this process. Once the retention period has passed, AWS EBS automatically purges this data from the file record. AWS EBS acts as an internal file system and is only directly accessible by the internal Kafka brokers. Consuming and producing systems cannot directly access the underlying file system. This minimizes the amount of time that the sensitive data is persisted in our system, and ensures that once the retention period has passed, it is purged from the system.

Section 4. Internal Sharing/Receiving/Transmitting and Disclosure

The following questions are intended to define the scope of information sharing/receiving/transmitting within VA.

4.1 With which internal organizations is information shared/received/transmitted? What information is shared/received/transmitted, and for what purpose? How is the information transmitted?
NOTE: Question 3.9 (second table) on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any program offices, contractor-supported IT systems, and any other organization or IT system within VA with which information is shared.

State the purpose for the internal sharing. If you have specific authority to share the information, provide a citation to the authority.

For each interface with a system outside your program office, state what specific data elements (PII/PHI) are shared with the specific program office, contractor-supported IT system, and any other organization or IT system within VA.

Describe how the information is transmitted. For example, is the information transmitted electronically, by paper, or by some other means? Is the information shared in bulk, on a case-by-case basis, or does the sharing partner have direct access to the information?

This question is related to privacy controls AP-2, Purpose Specification, AR-3, Privacy Requirements for Contractors and Service Providers, AR-8, Accounting of Disclosures, TR-1, Privacy Notice, and UL-1, Internal Use.

### Data Shared with Internal Organizations

<table>
<thead>
<tr>
<th>List the Program Office or IT System information is shared/received with</th>
<th>List the purpose of the information being shared/received with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program Office or IT system</th>
<th>Describe the method of transmittal</th>
</tr>
</thead>

### 4.2 PRIVACY IMPACT ASSESSMENT: Internal sharing and disclosure

Discuss the privacy risks associated with the sharing of information within the Department and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

This question is related to privacy control UL-1, Internal Use.
Follow the format below:

**Privacy Risk:** As a conduit between VA systems, the Enterprise Event Bus does not have control of the data once it leaves our system. It will ultimately fall upon the consuming systems to ensure that any PII or PHI data is appropriately handled.

**Mitigation:** The Enterprise Event Bus is implementing an onboarding process for systems that are interested in consuming events, which will help walk them through expectations regarding how sensitive data should be handled. All data found in lower environments, such as development, staging, and other test environments, must be mocked. Consuming systems must undergo their own PIA reviews before accessing production data.

**Privacy Risk:** While we have policies that all data found in lower environments must be mocked, it is possible that a system may inadvertently push PII/PHI into these lower environments.

**Mitigation:** All individuals accessing the Enterprise Event Bus as administrators must undergo annual training regarding online information security and HIPAA policies via the VA Talent Management System (TMS), and thus are familiar with the protocol that must be followed regarding handling incidents where private data is exposed. We also have a protocol for purging sensitive records (https://github.com/department-of-veterans-affairs/VES/blob/master/research/Event%20Bus/Engineering/PII%20and%20PHI%20Security%20Implications.md) to minimize exposure if private data is exposed.

**Privacy Risk:** Event-based architecture creates streams of data; because data is actively pushed to consuming systems, this potentially increases the impact of any security incident. In the event of misconfigured permissions, data will actively stream to systems configured to receive it.

**Mitigation:** The process of allocating new Identity and Access Management (IAM) policies requires two approvals to minimize the chances of policy misconfiguration that could give systems access to data that they should not have. Whenever possible, events are designed to minimize the amount of sensitive data they contain (see this Event Guidance document: https://github.com/department-of-veterans-affairs/VES/blob/master/research/Event%20Bus/Engineering/Engineering%20Notes%20Event%20Guidance.md) to minimize the impact of such a misconfiguration.

**Section 5. External Sharing/Receiving and Disclosure**

The following questions are intended to define the content, scope, and authority for information sharing external to VA, which includes Federal, State, and local governments, and the private sector.

5.1 With which external organizations (outside VA) is information shared/received? What information is shared/received, and for what purpose? How is the information transmitted and what measures are taken to ensure it is secure?

Is the sharing of information outside the agency compatible with the original collection? If so, is it covered by an appropriate routine use in a SORN? If not, please describe under what legal mechanism the IT system is allowed to share the information in identifiable form or personally identifiable information outside of VA.
NOTE: Question 3.10 on Privacy Threshold Analysis should be used to answer this question.

Identify and list the names of any Federal, State, or local government agency or private sector organization with which information is shared.

For each interface with a system outside VA, state what specific data elements (PII/PHI) are shared with each specific partner.

What legal mechanisms, authoritative agreements, documentation, or policies are in place detailing the extent of the sharing and the duties of each party? For example, is the sharing of data compatible with your SORN? Then list the SORN and the applicable routine use from the SORN. Is there a Memorandum of Understanding (MOU), Computer Matching Agreement (CMA), or law that mandates the sharing of this information?

Describe how the information is transmitted to entities external to VA and what security measures have been taken to protect it during transmission.

This question is related to privacy control UL-2, Information Sharing with Third Parties

Data Shared with External Organizations

<table>
<thead>
<tr>
<th>List External Program Office or IT System information is shared/received with</th>
<th>List the purpose of information being shared / received / transmitted with the specified program office or IT system</th>
<th>List the specific PII/PHI data elements that are processed (shared/received/transmitted) with the Program or IT system</th>
<th>List the legal authority, binding agreement, SORN routine use, etc. that permit external sharing (can be more than one)</th>
<th>List the method of transmission and the measures in place to secure data</th>

5.2 PRIVACY IMPACT ASSESSMENT: External sharing and disclosure

Discuss the privacy risks associated with the sharing of information outside the Department and what steps, if any, are currently being taken to mitigate those identified risks.

If no External Sharing listed on the table above, (State there is no external sharing in both the risk and mitigation fields).

Discuss whether access controls have been implemented and whether audit logs are regularly reviewed to ensure appropriate sharing outside of the Department. For example, is there a Memorandum of Understanding (MOU), contract, or agreement in place with outside agencies or foreign governments.

Discuss how the sharing of information outside of the Department is compatible with the stated purpose and use of the original collection.
This question is related to privacy control AR-2, Privacy Impact and Risk Assessment, AR-3, Privacy Requirements for Contractors and Service Providers, and AR-4, Privacy Monitoring and Auditing

Follow the format below:

**Privacy Risk:** The Enterprise Event Bus system does not share any information with systems external to VA.

**Mitigation:** The Enterprise Event Bus system does not share any information with systems external to VA.

**Section 6. Notice**

The following questions are directed at providing notice to the individual of the scope of information collected, the right to consent to uses of the information, and the right to decline to provide information.

6.1 Was notice provided to the individual before collection of the information? If yes, please provide a copy of the notice as an Appendix-A 6.1 on the last page of the document. Also provide notice given to individuals by the source system (A notice may include a posted privacy policy, a Privacy Act notice on forms, or a system of records notice published in the Federal Register.) If notice was not provided, why not?

These questions are related to privacy control TR-1, Privacy Notice, and TR-2, System of Records Notices and Privacy Act Statements, and TR-3, Dissemination of Privacy Program Information.

6.1a This question is directed at the notice provided before collection of the information. This refers to whether the person is aware that his or her information is going to be collected. A notice may include a posted privacy policy, a Privacy Act statement on forms, or a SORN published in the Federal Register, Notice of Privacy Practice provided to individuals for VHA systems. If notice was provided in the Federal Register, provide the citation.

The Enterprise Event Bus does not collect any data directly from individuals, nor does its source system (Benefits Integration Platform).

6.1b If notice was not provided, explain why. If it was provided, attach a copy of the current notice.

Notice is not provided because the Enterprise Event Bus does not collect any data directly from individuals, nor does its source system (Benefits Integration Platform).

6.1c Describe how the notice provided for the collection of information is adequate to inform those affected by the system that their information has been collected and is being used appropriately. Provide information on any notice provided on forms or on Web sites associated with the collection.

Notice is not provided because the Enterprise Event Bus does not collect any data directly from individuals, nor does its source system (Benefits Integration Platform).
6.2 Do individuals have the opportunity and right to decline to provide information? If so, is a penalty or denial of service attached?

This question is directed at whether the person from or about whom information is collected can decline to provide the information and if so, whether a penalty or denial of service is attached. This question is related to privacy control IP-1, Consent, IP-2, Individual Access, and IP-3, Redress.

Right to decline is not required because the Enterprise Event Bus does not collect any data directly from individuals, nor does its source system (Benefits Integration Platform).

6.3 Do individuals have the right to consent to particular uses of the information? If so, how does the individual exercise the right?

This question is directed at whether an individual may provide consent for specific uses, or the consent is given to cover all uses (current or potential) of his or her information. If specific consent is required, how would the individual consent to each use? This question is related to privacy control IP-1, Consent.

Consent is not required because the Enterprise Event Bus does not collect any data directly from individuals, nor does its source system (Benefits Integration Platform).

6.4 PRIVACY IMPACT ASSESSMENT: Notice

Describe the potential risks associated with potentially insufficient notice and what steps, if any, are currently being taken to mitigate those identified risks. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

**Principle of Transparency:** Has sufficient notice been provided to the individual?

**Principle of Use Limitation:** Is the information used only for the purpose for which notice was provided either directly to the individual or through a public notice? What procedures are in place to ensure that information is used only for the purpose articulated in the notice? This question is related to privacy control TR-1, Privacy Notice, AR-2, Privacy Impact and Risk Assessment, and UL-1, Internal Use.

Follow the format below:

**Privacy Risk:** Notice is provided to individuals by the systems that do the initial collection of data, not the Event Bus system. Although the information is collected from other source systems, there is still a risk of no notice.

**Mitigation:** Currently there are no consumers of event data. Mitigation is the responsibility of the systems that do the initial collection of data. If Enterprise Event Bus observed a situation where notice was required, the Enterprise Event Bus team would inform the source system (Benefits Integration Platform).
Section 7. Access, Redress, and Correction

The following questions are directed at an individual’s ability to ensure the accuracy of the information collected about him or her.

7.1 What are the procedures that allow individuals to gain access to their information?

These questions are related to privacy control IP-2, Individual Access, and AR-8, Accounting of Disclosures.

7.1a Cite any procedures or regulations your program has in place that allow access to information. These procedures, at a minimum, should include the agency’s FOIA/Privacy Act practices, but may also include additional access provisions. For example, if your program has a customer satisfaction unit, that information, along with phone and email contact information, should be listed in this section in addition to the agency’s procedures. See 5 CFR 294 and the VA FOIA Web page at http://www.foia.va.gov/ to obtain information about FOIA points of contact and information about agency FOIA processes.

Procedures that allow access information are handled by the systems that initially collect the information, not the Event Bus system.

7.1b If the system is exempt from the access provisions of the Privacy Act, please explain the basis for the exemption or cite the source where this explanation may be found, for example, a Final Rule published in the Code of Federal Regulations (CFR)?

The Enterprise Event Bus system is exempt from these provisions as it does not collect or write any information about individuals; the system only transfers information from one system to another.

7.1c If the system is not a Privacy Act system, please explain what procedures and regulations are in place that covers an individual gaining access to his or her information?

The Enterprise Event Bus is not a system of record. Fulfilling a request for an individual to gain access to his or her information is the responsibility of the systems that initially collect the information.

7.2 What are the procedures for correcting inaccurate or erroneous information?

Describe the procedures and provide contact information for the appropriate person to whom such issues should be addressed? If the correction procedures are the same as those given in question 7.1, state as much. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

The Enterprise Event Bus system does not directly collect information from individuals and thus does not have any means to correct information that originates in other systems. If an individual wishes to correct information about themselves, they will need to contact the system(s) that initially collected the information.

7.3 How are individuals notified of the procedures for correcting their information?
How are individuals made aware of the procedures for correcting his or her information? This may be through notice at collection or other similar means. This question is meant to address the risk that even if procedures exist to correct information, if an individual is not made fully aware of the existence of those procedures, then the benefits of the procedures are significantly weakened. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

The Enterprise Event Bus system does not directly collect information from individuals and thus does not have any means to correct information that originates in other systems. When applicable, individuals will be notified by the system(s) that initially collected the information.

7.4 If no formal redress is provided, what alternatives are available to the individual?

Redress is the process by which an individual gains access to his or her records and seeks corrections or amendments to those records. Redress may be provided through the Privacy Act and Freedom of Information Act (FOIA), and also by other processes specific to a program, system, or group of systems. Example: Some projects allow users to directly access and correct/update their information online. This helps ensures data accuracy. This question is related to privacy control IP-3, Redress, and IP-4, Complaint Management.

This would be handled by the system(s) that originally collect the information that is shared with the Enterprise Event Bus.

7.5 PRIVACY IMPACT ASSESSMENT: Access, redress, and correction

Discuss what risks there currently are related to the Department’s access, redress, and correction policies and procedures for this system and what, if any, steps have been taken to mitigate those risks. For example, if a project does not allow individual access, the risk of inaccurate data needs to be discussed in light of the purpose of the project. For example, providing access to ongoing law enforcement activities could negatively impact the program’s effectiveness because the individuals involved might change their behavior. (Work with your System ISSO to complete all Privacy Risk questions inside the document this section).

Consider the following FIPPs below to assist in providing a response:

Principle of Individual Participation: Is the individual provided with the ability to find out whether a project maintains a record relating to him?

Principle of Individual Participation: If access and/or correction is denied, then is the individual provided notice as to why the denial was made and how to challenge such a denial?

Principle of Individual Participation: Is there a mechanism by which an individual is able to prevent information about him obtained for one purpose from being used for other purposes without his knowledge?

This question is related to privacy control IP-3, Redress.

Follow the format below:

Privacy Risk: The Enterprise Event Bus system does not directly collect any information from individuals and thus does not have any provision for providing access, redress, and correction.
Although this system does not collect information from individuals, there is still a privacy risk associated to individuals not having access, redress, and correction.

**Mitigation:** Access, redress, and correction activities take place through the systems that originally collect the information that is shared with the Enterprise Event Bus.

**Section 8. Technical Access and Security**

The following questions are intended to describe technical safeguards and security measures.

**8.1 What procedures are in place to determine which users may access the system, and are they documented?**

*These questions are related to privacy control AR-7, Privacy-Enhanced System Design and Development.*

**8.1a Describe the process by which an individual receives access to the system?**

Individuals outside of system administrators are not given direct access to the system. New system administrators must go through the process of obtaining a valid va.gov email address. Once this has been obtained, an existing system administrator must request access for that individual by contacting the Lighthouse Delivery Infrastructure support team per their support channels (https://laughing-adventure-wlepqe.pages.github.io). Note that this does not grant that individual access to any of the data within the system, and system administrators cannot directly modify data access permissions. They must first open a pull request against the Lighthouse-DI managed customer resources repository (https://github.com/department-of-veterans-affairs/lighthouse-di-managed-customer-resources) to allocate the new permissions, and then reach out to an administrator on the Lighthouse Delivery Infrastructure team to approve the change and create the new resource.

**8.1b Identify users from other agencies who may have access to the system and under what roles these individuals have access to the system. Who establishes the criteria for what PII can be shared?**

No users from other agencies will have access to the Enterprise Event Bus, only systems within VA have access.

**8.1c Describe the different roles in general terms that have been created to provide access to the system? For example, certain users may have "read-only" access while others may be permitted to make certain amendments or changes to the information.**

Note that these terms apply to systems that are accessing the system. The Enterprise Event Bus is intended for system-to-system communication, and individual users are not permitted to directly access the event streams. The Event Bus leverages AWS IAM (Identity and Access Management) for its authentication and authorization. “Topic Consumers” are systems which have read access to a specific topic, and “Topic Producers” are systems that have read and write access to a specific topic. See MSK Service Authorization Reference (https://docs.aws.amazon.com/service-authorization/latest/reference/list_amazonmanagedstreamingforapachekafka.html) for a full listing of available actions and resource types.
8.2 Will VA contractors have access to the system and the PII? If yes, what involvement will contractors have with the design and maintenance of the system? Has a contractor confidentiality agreement, Business Associate Agreement (BAA), or a Non-Disclosure Agreement (NDA) been developed for contractors who work on the system?

A confidentiality agreement, Business Associate Agreement (BAA), and a Non-Disclosure Agreement (NDA) have not been developed for contractors working on this system.

If so, how frequently are contracts reviewed and by whom? Describe the necessity of the access provided to contractors to the system and whether clearance is required. If Privacy Roles and Responsibilities have been established to restrict certain users to different access levels, please describe the roles and associated access levels. Explain the need for VA contractors to have access to the PII. This question is related to privacy control AR-3, Privacy Requirements for Contractors, and Service Providers.

The Enterprise Event Bus is designed and developed by a team comprised of 100% contractor staff. The contractors who provide support to the system are required to complete annual VA Privacy and Information Security and Rules of behavior training via the VA’s TMS. All contractors are cleared using the VA background investigation process and must obtain a Moderate Background Investigation (MBI) clearance before access is granted.

All user access to the Event Bus system is provisioned and processed in accordance with Lighthouse Delivery Infrastructure (LHDI) policies and procedures. See the following documentation for more information:

- LHDI Getting Started Guide
- Access Validation Guide
- Lighthouse Delivery Infrastructure (LHDI) Onboarding Process Overview (as of 5/22/23)

8.3 Describe what privacy training is provided to users either generally or specifically relevant to the program or system?

VA offers privacy and security training. Each program or system may offer training specific to the program or system that touches on information handling procedures and sensitivity of information. Please describe how individuals who have access to PII are trained to handle it appropriately. This question is related to privacy control AR-5, Privacy Awareness and Training.

10176-VA Privacy and Information Security Awareness and Rules of Behavior (WBT)
10203-Privacy and HIPAA Training

8.4 Has Authorization and Accreditation (A&A) been completed for the system?

No; in process.

8.4a If Yes, provide:
1. The Security Plan Status: <<<ADD ANSWER HERE>>
2. The System Security Plan Status Date: <<<ADD ANSWER HERE>>
3. The Authorization Status: <<<ADD ANSWER HERE>>
4. The Authorization Date: <<<ADD ANSWER HERE>>
5. The Authorization Termination Date: <<<ADD ANSWER HERE>>
6. The Risk Review Completion Date: <<<ADD ANSWER HERE>>
7. The FIPS 199 classification of the system (LOW/MODERATE/HIGH): <<<ADD ANSWER HERE>>

Please note that all systems containing SPI are categorized at a minimum level of “moderate” under Federal Information Processing Standards Publication 199.

8.4b If No or In Process, provide your Initial Operating Capability (IOC) date.

An MVP version of the Enterprise Event Bus system has a target production deployment date of April 5, 2024.

Section 9 – Technology Usage
The following questions are used to identify the technologies being used by the IT system or project.

9.1 Does the system use cloud technology? If so, what cloud model is being utilized?

If so, Does the system have a FedRAMP provisional or agency authorization? If the system does use cloud technology, but does not have FedRAMP authorization, explain how the Cloud Service Provider (CSP) solution was assessed and what FedRAMP documents and processes were used for the assessment in order to comply with VA Handbook 6517. Types of cloud models include: Software as a Service (SaaS), Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Commercial off the Shelf (COTS), Desktop as a Service (DaaS), Mobile Backend as a Service (MBaaS), Information Technology Management as a Service (ITMaaS). This question is related to privacy control UL-1, Information Sharing with Third Parties.

Note: For systems utilizing the VA Enterprise Cloud (VAEC), no further responses are required after 9.1. (Refer to question 3.3.1 of the PTA)

Yes, Enterprise Event Bus is a SaaS on VA Enterprise Cloud (VAEC).

9.2 Does the contract with the Cloud Service Provider, Contractors and VA customers establish who has ownership rights over data including PII? (Provide contract number and supporting information about PII/PHI from the contract). (Refer to question 3.3.2 of the PTA) This question is related to privacy control AR-3, Privacy Requirements for Contractors, and Service Providers.

9.3 Will the CSP collect any ancillary data and if so, who has ownership over the ancillary data?

Per NIST 800-144, cloud providers hold significant details about the accounts of cloud consumers that could be compromised and used in subsequent attacks. Ancillary data also involves information the cloud provider collects or produces about customer-related activity in the cloud. It includes data collected to meter and charge for consumption of resources, logs and
audit trails, and other such metadata that is generated and accumulated within the cloud environment.
This question is related to privacy control DI-1, Data Quality.

9.4 NIST 800-144 states, “Organizations are ultimately accountable for the security and privacy of data held by a cloud provider on their behalf.” Is this principle described in contracts with customers? Why or why not?
What are the roles and responsibilities involved between the organization and cloud provider, particularly with respect to managing risks and ensuring organizational requirements are met?
This question is related to privacy control AR-3, Privacy Requirements for Contractors and Service Providers.

9.5 If the system is utilizing Robotics Process Automation (RPA), please describe the role of the bots.
Robotic Process Automation is the use of software scripts to perform tasks as an automated process that executes in parallel with or in place of human input. For example, will the automation move or touch PII PHI information. RPA may also be referred to as “Bots” or Artificial Intelligence (AI).
